## Copyright Information

### Copyright Declarations

Copyright 2014 All rights reserved. This publication contains information that is protected by copyright. No part may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language without written permission from the copyright holders.

### Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows, Windows 95, 98, Me, NT, 2000, XP, Vista and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

## Safety Instructions and Approval

### Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

### Warranty

We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

### Be a Registered Owner

Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

### Firmware & Tools Updates

Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

## European Community Declarations

Manufacturer: DrayTek Corp.  
Address: No. 26, Fu Shing Road, Hukou Township, Hsinchu Industrial Park, Hsinchu County, Taiwan 303  
Product: Vigor2850 Series Router

DrayTek Corp. declares that Vigor2850 Series of routers are in compliance with the following essential requirements and other relevant provisions of R&TTE Directive 1999/5/EEC.

The product conforms to the requirements of Electro-Magnetic Compatibility (EMC) Directive 2004/108/EC by complying with the requirements set forth in EN55022/Class B and EN55024/Class B.

The product conforms to the requirements of Low Voltage (LVD) Directive 2006/95/EC by complying with the requirements set forth in EN60950-1.

This product is designed for the DSL, ISDN, POTS, 2.4GHz WLAN network throughout the EC region and Switzerland with restrictions in France. Please see the user manual for the applicable networks on your product.

## Regulatory Information

### Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device may accept any interference received, including interference that may cause undesired operation.

The antenna/transmitter should be kept at least 20 cm away from human body.

# 1

## Introduction

Vigor2850 series, a VDSL2 router, integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

By adopting hardware-based VPN platform and hardware encryption of AES/DES/3DES, the router increases the performance of VPN greatly, and offers several protocols (such as IPSec/PPTP/L2TP) with up to 32 VPN tunnels.

The object-based design used in SPI (Stateful Packet Inspection) firewall allows users to set firewall policy with ease. CSM (Content Security Management) provides users control and management in IM (Instant Messenger) and P2P (Peer to Peer) more efficiency than before. By the way, DoS/DDoS prevention and URL/Web content filter strengthen the security outside and control inside. Object-based firewall is flexible and allows your network be safe.

In addition, Vigor2850 series supports USB interface for connecting USB printer to share printing function or 3G USB modem for network connection.

Vigor2850 series provides two-level management to simplify the configuration of network connection. The user mode allows user accessing into WEB interface via simple configuration. However, if users want to have advanced configurations, they can access into WEB interface through admin mode.

### 1.1 Web Configuration Buttons Explanation

Several main buttons appeared on the web pages are defined as the following:

	Save and apply current settings.
	Cancel current settings and recover to the previous saved settings.
	Clear all the selections and parameters settings, including selection from drop-down list. All the values must be reset with factory default settings.
	Add new settings for specified item.
	Edit the settings for the selected item.
	Delete the selected item with the corresponding settings.

**Note:** For the other buttons shown on the web pages, please refer to Chapter 3, 4 for detailed explanation.

## 1.2 LED Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

### 1.2.1 For Vigor2850

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WAN2	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
WCF	On	The Web Content Filter is active. (It is enabled from <b>Firewall &gt;&gt; General Setup</b> ).
ADSL	On	The router is ready to access Internet through ADSL link.
	Blinking	Slowly: The ADSL connection is ready. Quickly: The connection is training.
VDSL	On	The router is ready to access Internet through VDSL link.
	Blinking	Slowly: The VDSL connection is ready. Quickly: The connection is training.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while an attack is detected.
VPN	On	The VPN tunnel is active.
QoS	On	The QoS function is active.

#### LED on Connector

GigaLAN 1/2/3	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.
		Blinking	The data is transmitting.
GigaLAN 4/WAN (Giga)	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.
		Blinking	The data is transmitting.

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
GigaLAN (1-3)	Connecters for local network devices.
4/WAN	Connector for local network devices or remote network devices.
VDSL/ADSL	Connector for accessing the Internet.
USB	Connector for a USB device (for 3G USB Modem or printer).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.2.2 For Vigor2850n

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WAN2	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
WLAN	On	Wireless access point is ready.
	Blinking	It will blink slowly while wireless traffic goes through. If ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and it will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)
ADSL	On	The router is ready to access Internet through ADSL link.
	Blinking	Slowly: The ADSL connection is ready. Quickly: The connection is training.
VDSL	On	The router is ready to access Internet through VDSL link.
	Blinking	Slowly: The VDSL connection is ready. Quickly: The connection is training.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while an attack is detected.
VPN	On	The VPN tunnel is active.
QoS	On	The QoS function is active.

### LED on Connector

GigaLAN 1/2/3	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.
GigaLAN 4/WAN (Giga)	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.

Interface	Description
Wireless LAN ON/OFF/WPS	Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
GigaLAN (1-3)	Connecters for local network devices.
4/WAN	Connector for local network devices or remote network devices.
VDSL/ADSL	Connector for accessing the Internet.
USB	Connector for a USB device (for 3G USB Modem or printer).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

### 1.2.3 For Vigor2850Vn

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WAN2	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
WLAN	On	Wireless access point is ready.
	Blinking	It will blink slowly while wireless traffic goes through. If ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and it will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)
ADSL	On	The router is ready to access Internet through ADSL link.
	Blinking	Slowly: The ADSL connection is ready. Quickly: The connection is training.
VDSL	On	The router is ready to access Internet through VDSL link.
	Blinking	Slowly: The VDSL connection is ready. Quickly: The connection is training.
Line	On	A PSTN phone call comes (in and out). However, when the phone call is disconnected, the LED will be off.
	Off	There is no PSTN phone call.
Phone 1/2	On	The phone connected to this port is off-hook.
	Off	The phone connected to this port is on-hook.
	Blinking	A phone call comes.

#### LED on Connector

GigaLAN 1/2/3	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.
GigaLAN 4/WAN (Giga)	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps.

Interface	Description
Wireless LAN ON/OFF/WPS	Press "Wireless LAN ON/OFF/WPS" button once to wait for client device making network connection through WPS. Press "Wireless LAN ON/OFF/WPS" button twice to enable (WLAN LED on) or disable (WLAN LED off) wireless connection.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
Phone 1/2	Connector for analog phone(s).
Line	Connector for PSTN life line.
GigaLAN (1-3)	Connectors for local network devices.
4/WAN	Connector for local network devices or remote network devices.
VDSL/ADSL	Connector for accessing the Internet.
USB	Connector for a USB device (for 3G USB Modem or printer).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.2.4 For Vigor2850i

LED	Status	Explanation
ACT (Activity)	Blinking	The router is powered on and running normally.
	Off	The router is powered off.
USB	On	USB device is connected and ready for use.
	Blinking	The data is transmitting.
WAN2	On	Internet connection is ready.
	Off	Internet connection is not ready.
	Blinking	The data is transmitting.
WCF	On	The Web Content Filter is active. (It is enabled from <b>Firewall &gt;&gt; General Setup</b> ).
	Off	The Web Content Filter is disabled.
ADSL	On	The router is ready to access Internet through ADSL link.
	Blinking	Slowly: The ADSL connection is ready. Quickly: The connection is training.
VDSL	On	The router is ready to access Internet through VDSL link.
	Blinking	Slowly: The VDSL connection is ready. Quickly: The connection is training.
DoS	On	The DoS/DDoS function is active.
	Blinking	It will blink while detecting an attack.
VPN	On	The VPN tunnel is active.
QoS	On	The QoS function is active.

### LED on Connector

ISDN	Right LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data and voice are transmitting.
GigaLAN 1/2/3	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps
GigaLAN 4/WAN	Left LED (Green)	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED (Green)	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps

Interface	Description
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
ISDN	Connector for ISDN line.
GigaLAN (1-3)	Connectors for local network devices.
4/WAN	Connector for local network devices or modem for accessing Internet.
VDSL/ADSL	Connector for accessing the Internet.
USB	Connector for a USB device (for 3G USB Modem or printer).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.3 Hardware Installation

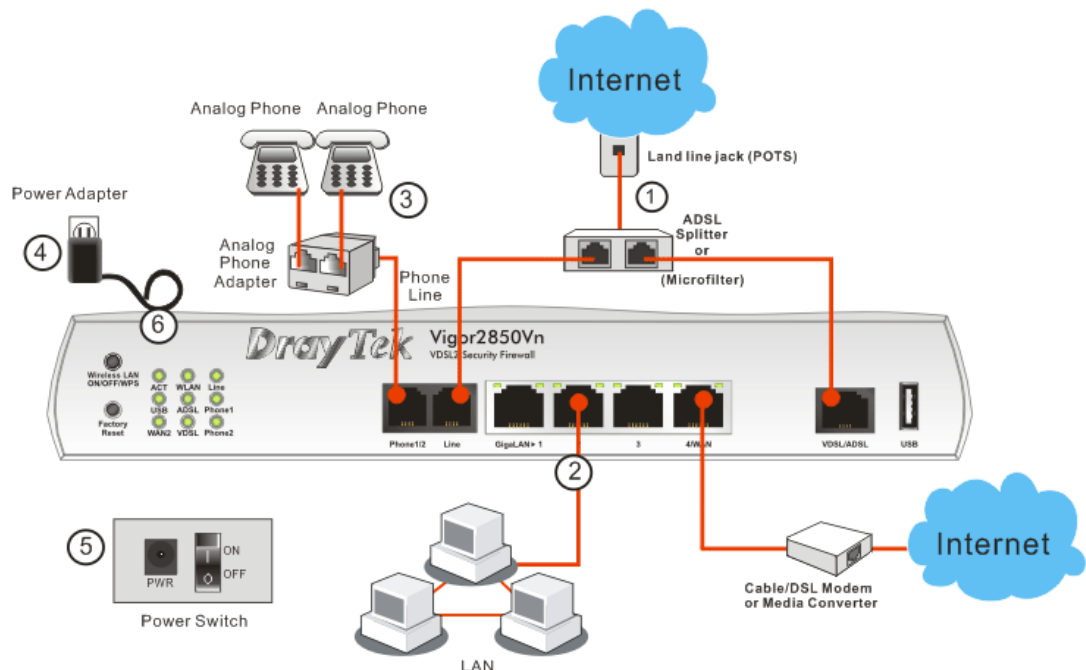

Before starting to configure the router, you have to connect your devices correctly.

1. Connect the XDSL interface to the external XDSL splitter with an XDSL line cable for all models. For Vigor2850Vn, also connect Line interface to external XDSL splitter.

2. Connect one end of an Ethernet cable (RJ-45) to one of the **LAN** ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect the telephone set with phone lines (for using VoIP function). For the model without phone ports, skip this step.
4. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
5. Power on the device by pressing down the power switch on the rear panel.
6. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.

(For the hardware connection, we take “Vn” model as an example.)

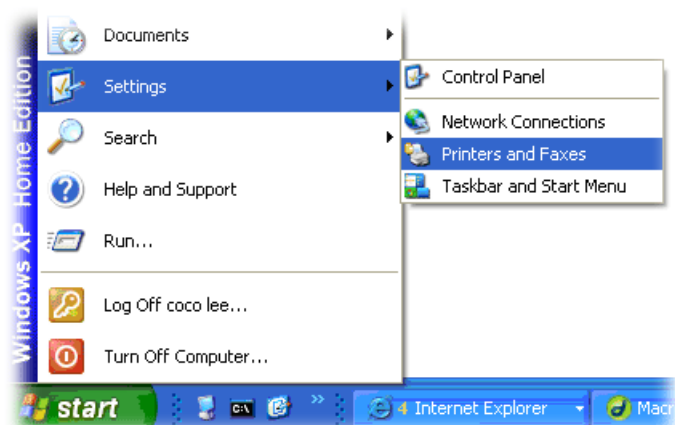

## 1.4 Printer Installation

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows XP/2000. For Windows 98/SE/Vista, please visit [www.DrayTek.com](http://www.DrayTek.com).

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

1. Connect the printer with the router through USB/parallel port.
2. Open **Start->Settings-> Printer and Faxes**.

3. Open **File->Add Printer**. A welcome dialog will appear. Please click **Next**.

4. Click Local printer attached to this computer and click Next.

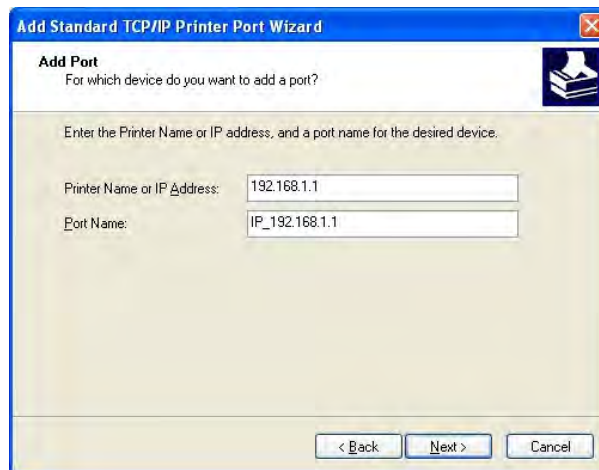

5. In this dialog, choose **Create a new port Type of port** and use the drop down list to select **Standard TCP/IP Port**. Click Next.

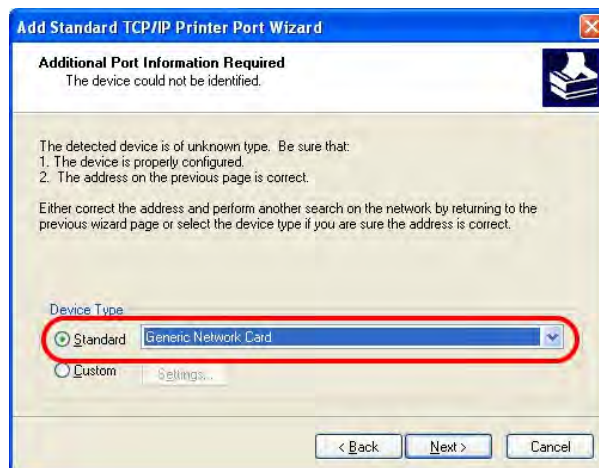

6. In the following dialog, type **192.168.1.1** (router's LAN IP) in the field of **Printer Name or IP Address** and type **IP\_192.168.1.1** as the port name. Then, click **Next**.

7. Click **Standard** and choose **Generic Network Card**.

8. Then, in the following dialog, click **Finish**.

9. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

10. For the final stage, you need to go back to **Control Panel-> Printers** and edit the property of the new printer you have added.

11. Select "**LPR**" on Protocol, type **p1** (number 1) as Queue Name. Then click **OK**. Next please refer to the red rectangle for choosing the correct protocol and LPR name.

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

**Note 1:** Some printers with the fax/scanning or other additional functions are not supported. If you do not know whether your printer is supported or not, please visit [www.draytek.com](http://www.draytek.com) to find out the printer list. Open **Support >FAQ**; find out the link of **Printer Server** and click it.

**Note 2:** Vigor router supports printing request from computers via LAN ports but not WAN port.

## 1.5 Accessing Web Page

1. Make sure your PC connects to the router correctly.

You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

The image shows a web browser window displaying the DrayTek login page. The page has a light gray background with a red footer. In the center, there are two input fields: the top one is labeled 'Username' and the bottom one is labeled 'Password'. To the right of the 'Password' field is a 'Login' button. At the bottom of the page, there is a red banner with the text 'Copyright©, DrayTek Corp. All Rights Reserved.' on the left and the 'DrayTek' logo on the right.

3. Please type “admin/admin” as the Username/Password and click **Login**.

**Notice:** If you fail to access to the web configuration, please go to “Trouble Shooting” for detecting and solving your problem.

4. Now, the **Main Screen** will appear.

WAN3 Disconnected	00-50-7F-EA-7E-CB	---	---	---

**IPv6**

Address	Scope	Internet Access Mode
LAN FE80::250:7FFF:FE0A:7EC8/64	Link	---

**VoIP**

**Note:** The home page will be different slightly in accordance with the type of the router you have.

5. The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

## 1.6 Changing Password

Please change the password for the original security of the router.

1. Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
2. Please type “admin/admin” as Username/Password for accessing into the web configurator with admin mode.
3. Go to **System Maintenance** page and choose **Administrator Password/**.

System Maintenance >> Administrator Password Setup

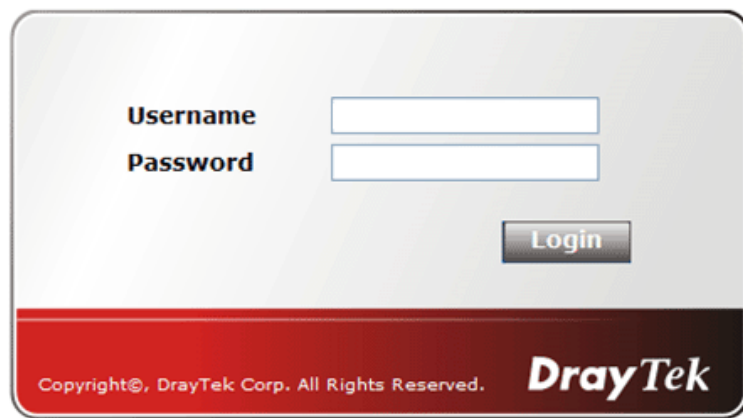

### Administrator Password

Old Password	<input type="text"/>
New Password	<input type="text"/>
Confirm Password	<input type="text"/>

Note: Password can contain only a-z A-Z 0-9 , ; : " < > \* + = \ | ? @ # ^ ! ( )

OK

4. Enter the login password (the default is “admin”) on the field of **Old Password**. Type **New Password**. Then click **OK** to continue.
5. Now, the password has been changed. Next time, use the new password to access the Web Configurator for this router.

The image shows a login window with a light gray background and rounded corners. It features two input fields: 'Username' and 'Password', both with blue borders. Below the 'Password' field is a 'Login' button with a dark gray background and white text. At the bottom of the window is a red banner with the text 'Copyright©, DrayTek Corp. All Rights Reserved.' on the left and the 'DrayTek' logo on the right. A small number '4' is visible at the bottom right corner of the window.

## 1.7 Online Status

### 1.7.1 Physical Connection

Such page displays the physical connection status such as LAN connection status, WAN connection status, ADSL information, and so on.

### Physical Connection for IPv4 Protocol

## Online Status

Physical Connection					System Uptime: 4:7:53

## Physical Connection for IPv6 Protocol

### Online Status

Physical Connection				System Uptime: 4:8:42	
IPv4		IPv6			
LAN Status					
IP Address					
FE80::250:7FFF:FEEA:7EC8/64 (Link)					
TX Packets		RX Packets		TX Bytes	
2		0		156	
				RX Bytes	
				0	
WAN IPv6 Status					
Enable		Mode		Up Time	
No		Offline		---	
IP				Gateway IP	
---				---	

Detailed explanation (for IPv4) is shown below:

Item	Description
<b>LAN Status</b>	<p><b>Primary DNS</b>-Displays the primary DNS server address for WAN interface.</p> <p><b>Secondary DNS</b> -Displays the secondary DNS server address for WAN interface.</p> <p><b>IP Address</b>-Displays the IP address of the LAN interface.</p> <p><b>TX Packets</b>-Displays the total transmitted packets at the LAN interface.</p> <p><b>RX Packets</b>-Displays the total received packets at the LAN interface.</p>
<b>WAN1/WAN2/WAN3 Status</b>	<p><b>Enable</b> – <b>Yes</b> in red means such interface is available but not enabled. <b>Yes</b> in green means such interface is enabled.</p> <p><b>Line</b> – Displays the physical connection (VDSL, ADSL, Ethernet, or USB) of this interface.</p> <p><b>Name</b> – Display the name of the router.</p> <p><b>Mode</b> - Displays the type of WAN connection (e.g., PPPoE).</p> <p><b>Up Time</b> - Displays the total uptime of the interface.</p> <p><b>IP</b> - Displays the IP address of the WAN interface.</p> <p><b>GW IP</b> - Displays the IP address of the default gateway.</p> <p><b>TX Packets</b> - Displays the total transmitted packets at the WAN interface.</p> <p><b>TX Rate</b> - Displays the speed of transmitted octets at the WAN interface.</p> <p><b>RX Packets</b> - Displays the total number of received packets at the WAN interface.</p> <p><b>RX Rate</b> - Displays the speed of received octets at the WAN interface.</p>

Detailed explanation (for IPv6) is shown below:

Item	Description
<b>LAN Status</b>	<p><b>IP Address</b>- Displays the IPv6 address of the LAN interface..</p> <p><b>TX Packets</b>-Displays the total transmitted packets at the LAN interface.</p> <p><b>RX Packets</b>-Displays the total received packets at the LAN interface.</p> <p><b>TX Bytes</b> - Displays the speed of transmitted octets at the LAN interface.</p> <p><b>RX Bytes</b> - Displays the speed of received octets at the LAN interface.</p>
<b>WAN IPv6 Status</b>	<p><b>Enable</b> – <b>No</b> in red means such interface is available but not enabled. <b>Yes</b> in green means such interface is enabled. <b>No</b> in red means such interface is not available.</p>

Item	Description
	<b>Mode</b> - Displays the type of WAN connection (e.g., TSPC). <b>Up Time</b> - Displays the total uptime of the interface. <b>IP</b> - Displays the IP address of the WAN interface. <b>Gateway IP</b> - Displays the IP address of the default gateway.

**Note:** The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

## 1.7.2 Virtual WAN

Such page displays the virtual WAN connection information.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

### Online Status

Virtual WAN				System Uptime: 69:7:20	
WAN 5 Status					
Enable	Line	Name	Mode	Up Time	Application

---	---	0	0	0	0

## 1.8 VDSL

This menu allows you to check VDSL status and configure VDSL settings for you request.

### 1.8.1 VDSL Status

This page displays the VDSL information for such router such as current connection status, the firmware version of such router, the profile used by such VDSL2 line, the rates for upstream and downstream, and so on.

VDSL >> VDSL Status

Auto-refresh ☐ Refresh

<b>VDSL</b>			
Link Status	Idle		
Firmware Version	1411f0		
<b>Basic Status</b>	<b>Upstream</b>	<b>Downstream</b>	<b>Unit</b>
VDSL Profile	None		
Actual Data Rate	0	0	Kb/s
SNR	N/A	N/A	0.1dB
<b>Advance Status</b>	<b>Upstream</b>	<b>Downstream</b>	<b>Unit</b>
Actual delay	0	0	ms
Actual INP	0	0	0.1 symbols
Actual INP	0	0	0.1 symbols
15M CV	0	0	counter
1Day CV	0	0	counter
15M FEC	0	0	counter
1Day FEC	0	0	counter
Total FEC	0	0	counter

### 1.8.2 VDSL Setup

This page allows you to set VDSL2 profile and G.hs Carrier Set.

VDSL >> VDSL Setup

**VDSL Setup**  
**Handshake Settings**

VDSL2 Profile	<input checked="" type="checkbox"/> 8a	<input checked="" type="checkbox"/> 8b	<input checked="" type="checkbox"/> 8c	<input checked="" type="checkbox"/> 8d	<input checked="" type="checkbox"/> 12a	<input checked="" type="checkbox"/> 12b	<input checked="" type="checkbox"/> 17a	<input checked="" type="checkbox"/> 30a
G.hs Carrier Set	<input checked="" type="radio"/> Auto	<input type="radio"/> A43	<input type="radio"/> B43	<input type="radio"/> V43				
Bit Swap	<input checked="" type="radio"/> on	<input type="radio"/> off						

Ok

Available settings are explained as follows:

Item	Description
<b>VDSL2 Profile</b>	Check the profiles that the router will support. Each profile can be used in different VDSL deployment architectures. The working profile will be decided by CO side.

<b>G.hs Carrier Set</b>	Choose one of the items as the G.hs Carrier Set. Each set will have different frequency indices and maximum power level for data in upstream and downstream.
<b>Bit Swap</b>	As line conditions change, bit swapping allows the modem to swap bits around different channels without retraining, as each channel becomes more or less capable.

After finished the above settings, simply click **OK** to save them.

### 1.8.3 VDSL Debug

Such feature can offer a system log while encountering the compatibility problem for VDSL connection. Simply click the **Generate** button. The system will generate the log for connection procedure. Later, you can save the log by clicking **Export** and send the information to DrayTek service center.

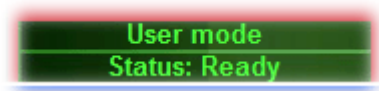

VDSL >> VDSL Status

Auto-refresh ☒

<b>VDSL</b>	Debug log not found !
Debug Log	
Generate	<input type="button" value="Generate"/>
DownLoad	<input type="button" value="Export"/>

## 1.9 Saving Configuration

Each time you click **OK** on the web page for saving the configuration, you can find messages showing the system interaction with you.

**Ready** indicates the system is ready for you to input settings.

**Settings Saved** means your settings are saved once you click **Finish** or **OK** button.

This page is left blank.

# 2

## Quick Setup

There are several setup wizards offered for you to configure the router simply and quickly.

- **Quick Start Wizard** – used for building network connection, Internet access.
- **Service Activation Wizard** – used for activating the web content filter service.
- **VPN Client Wizard** – used for establishing VPN tunnel; the router is treated as a VPN client.
- **VPN Server Wizard** – used for establishing VPN tunnel; the router is treated as a VPN server.
- **Wireless Wizard** – used for building wireless LAN connection.
- **VoIP Wizard** – used for establishing VoIP profile.

### 2.1 Quick Start Wizard

If your router can be under an environment with high speed NAT, the configuration provide here can help you to deploy and use the router quickly. The first screen of **Quick Start Wizard** is entering login password. After typing the password, please click **Next**.

#### Quick Start Wizard

##### Enter login password

Please enter an alpha-numeric string as your **Password** (Max 23 characters).

Old Password	<input type="password"/>
New Password	<input type="password"/>
Confirm Password	<input type="password"/>

On the next page as shown below, please select the WAN interface that you use. If DSL interface is used, please choose WAN1; if Ethernet interface is used, please choose WAN2; if 3G USB modem is used, please choose WAN3. Then click **Next** for next step.

## Quick Start Wizard

---

### WAN Interface

WAN Interface:	<input type="text" value="WAN1"/>
Display Name:	<input type="text"/>
Physical Mode:	ADSL / VDSL
Fallback Mode:	<input type="text" value="ADSL only"/>
Physical Type:	<input type="text" value="Auto negotiation"/>

< Back

Next >

Finish

Cancel

WAN1, WAN2 and WAN3 will bring up different configuration page. Refer to the following for detailed information.

### 2.1.1 For WAN1 (ADSL/VDSL)

WAN1 is specified for ADSL or VDSL connection.

#### Quick Start Wizard

##### WAN Interface

WAN Interface:	WAN1 ▾
Display Name:	<input type="text"/>
Physical Mode:	ADSL / VDSL
Fallback Mode:	ADSL only ▾
Physical Type:	Auto negotiation ▾

< Back   Next >   Finish   Cancel

You have to select the appropriate Internet access type **according to the information from your ISP**. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. In addition, the field of **For ADSL Only** will be available only when ADSL is detected. Then click **Next** for next step.

### PPPoE/PPPoA

1. Choose **WAN1** as WAN Interface and click the **Next** button; you will get the following page.

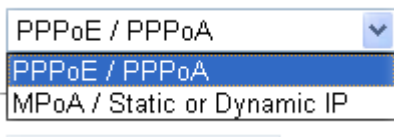

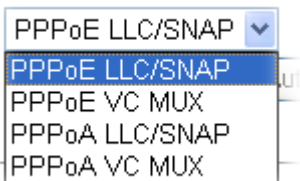

#### Quick Start Wizard

##### Connect to Internet

<b>WAN 1</b>	
Protocol	PPPoE / PPPoA ▾
<b>For ADSL Only:</b>

2. Click **DHCP** as the Internet Access type. Simply click **Next** to continue.

### Quick Start Wizard

#### DHCP Client Mode

##### WAN 2

If your ISP requires you to enter a specific host name or specific MAC address, please enter it in.

Host Name  (optional)

MAC   -   -   -   -   (optional)

[< Back](#)[Next >](#)[Finish](#)[Cancel](#)

Available settings are explained as follows:

Item	Description
Host Name	Type the name of the host.
MAC	Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to enter the MAC address.
Back	Click it to return to previous setting page.

<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Click it to give up the quick start wizard.

- After finished the settings above, click **Next** for viewing summary of such connection.

#### Quick Start Wizard

##### Please confirm your settings:

WAN Interface: WAN2  
 Physical Mode: Ethernet  
 Physical Type: Auto negotiation  
 Internet Access: DHCP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

#### Quick Start Wizard Setup OK !!!

- Now, you can enjoy surfing on the Internet.

### 2.1.3 For WAN3 (USB)

1. Choose **WAN3** as WAN Interface.

#### Quick Start Wizard

##### WAN Interface

WAN Interface:	WAN3
Display Name:	
Physical Mode:	USB
Physical Type:	Auto negotiation

< Back   Next >   Finish   Cancel

2. Then, click **Next** for getting the following page.

#### Quick Start Wizard

##### Connect to Internet

<b>WAN 3</b>	
Internet Access :	3G/4G USB Modem(PPP mode)
<b>3G/4G USB Modem(PPP mode)</b>	
SIM PIN code	
Modem Initial String	AT&FE0V1X1&D2&C1S0=0 (Default:AT&FE0V1X1&D2&C1S0=0)
APN Name	
Apply	

< Back   Next >   Finish   Cancel

Available settings are explained as follows:

Item	Description
<b>Internet Access</b>	Choose one of the selections as the protocol of accessing the internet.
<b>3G/4G USB Modem (PPP mode)</b>	<p><b>SIM Pin code</b> –Type PIN code of the SIM card that will be used to access Internet. The maximum length of the pin code you can set is 15 characters.</p> <p><b>Modem Initial String</b> – Such value is used to initialize USB modem. Please use the default value. If you have any question, please contact to your ISP. The maximum length of the string you can set is 47 characters.</p> <p><b>APN Name</b> – APN means Access Point Name which is provided and required by some ISPs. Type the name and</p>

	click <b>Apply</b> .
<b>4G USB Modem (DHCP mode)</b>	<p><b>SIM Pin code</b> –Type PIN code of the SIM card that will be used to access Internet.</p> <p><b>Network Mode</b> – Force Vigor router to connect Internet with the mode specified here. If you choose 4G/3G/2G as network mode, the router will choose a suitable one according to the actual wireless signal automatically.</p> <p><b>APN Name</b> – APN means Access Point Name which is provided and required by some ISPs.</p>

- Then, click **Next** for viewing summary of such connection.

#### Quick Start Wizard

##### Please confirm your settings:

WAN Interface:	WAN3
Physical Mode:	USB
Physical Type:	Auto negotiation
Internet Access:	PPP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

#### Quick Start Wizard Setup OK !!!

- Now, you can enjoy surfing on the Internet.

## 2.2 Service Activation Wizard

Service Activation Wizard can guide you to activate WCF service (Web Content Filter) with a quick and easy way. **For the Service Activation Wizard is only available for admin operation, therefore, please type “admin/admin” on Username/Password while Logging into the web configurator.**

Service Activation Wizard is a tool which allows you to use trial version or update the license of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>. For using Web Content Filter Profile, please refer to later section **Web Content Filter Profile** for detailed information.

Now, follow the steps listed below to activate WCF feature for your router.

**Note:** Such function is available only for **Admin Mode**.

1. Open **Wizards>>Service Activation Wizard**.

2. The screen of **Service Activation Wizard** will be shown as follows. Choose the one you need and click **Next**. In this case, we choose to activate free trail edition.

### Service Activation Wizard

#### Select the service type that you want to activate

This wizard is used for activating  
- Web Content Filter  
Please choose the edition you need.

- ☒ Free trial edition  
☐ Formal edition with license key

Next >

Finish

Cancel

**Free trial edition:** it offers a period of trial for you to get acquainted with WCF function.

**Formal edition with license key:** you can extend the license valid time manually.

**Note:** If you activate **Formal edition with license key** first, the free trial edition will be invalid.

3. In the following page, you can activate the Web content filter services at the same time or individually. When you finish the selection, please click **Next**.

Service Activation Wizard

Select the service type that you want to activate

This product provides 30 days of free trial, please choose the item(s) you want to use.

WCF service:

☒ Web Content Filter (Commtouch)

[License Agreement](#)

Commtouch is the web content filter based on Commtouch operated in the worldwide. There is a 30-day trial period. After trial, you can purchase DrayTek's prepared Commtouch GlobalView WCF package from retailing outlets.

Activation Date : 2010-10-27

☐ I have read and accept the above Agreement. (Please check this box).

**Note:** The activation date is brought out by the server automatically and cannot be changed.

< Back

Item	Description
<b>Go to the VPN Connection Management</b>	Click this radio button to access <b>VPN and Remote Access&gt;&gt;Connection Management</b> for viewing VPN Connection status.
<b>Do another VPN Server Wizard Setup</b>	Click this radio button to set another profile of VPN Server through VPN Server Wizard.
<b>View more detailed configuration</b>	Click this radio button to access <b>VPN and Remote Access&gt;&gt;LAN to LAN</b> for viewing detailed configuration.

## 2.5 Wireless Wizard

The wireless wizard allows you to configure settings specified for a host AP (for home use or internal use for a company) and specified for a guest AP (for any wireless clients accessing into Internet).

Follow the steps listed below:

1. Open **Wizards>>Wireless Wizard**.

2. The screen of wireless wizard will be shown as follows. This page will be used for internal users in a company or your home.

### Wireless Wizard

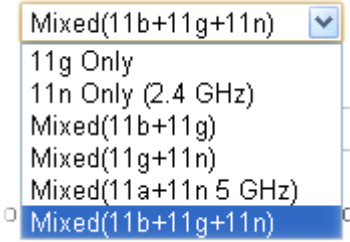

#### Host AP Configuration

Name:	<input type="text" value="DrayTek"/>
Mode:	<input type="button" value="Mixed(11b+11g+11n)"/>
Channel:	<input type="button" value="Channel 6, 2437MHz"/>
Password:	<input type="text"/>

**Note:** The host AP configured here will be used for home or internal company use.

Available settings are explained as follows:

Item	Description
<b>Name</b>	Type the SSID name of this router for wireless 2.4GHz. The default name is defined with DrayTek. Change the name if required.
<b>Mode</b>	At present, the router can connect to 11n Only, 11g Only, Mixed (11b+11g), Mixed (11a+11n), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mix (11b+11g+11n) mode.

	
<b>Channel</b>	Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.
<b>Password</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Exit the wireless wizard without saving any changes.

- After typing the required information, click **Next**. The settings in the page limit the wireless station (guest) accessing into Internet but not being allowed to share the LAN network and VPN connection.

#### Wireless Wizard

##### Guest AP Configuration

☒ Enable
 ☐ Disable

Name:

Password:

Rate Control:
 ☐ Enable
 Upload  kbps
 Download  kbps

**Note:** The configured guest AP will not be able to access the LAN network, VPN connections, or communicate with wireless devices connecting to the router's other APs. This AP interface shall be used for Internet access only.

Available settings are explained as follows:

Item	Description
<b>Enable/Disable</b>	Click it to enable or disable settings in this page.

<b>SSID</b>	Type the SSID name of this router.
<b>Security Key</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Rate Control</b>	<p>It controls the data transmission rate through wireless connection.</p> <p><b>Upload</b> – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p> <p><b>Download</b> – Type the transmitting rate for data download. Default value is 30,000 kbps.</p>
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Exit the wireless wizard without saving any changes.

- After typing the required information, click **Next**.
- The following page will display the configuration summary for wireless setting.

#### Wireless Wizard

##### Configuration Summary

**Basic Wireless Settings**

---

Mode: Mixed(11b+11g+11n)  
Channel: Channel 6, 2437MHz

**Host AP Configurations**

---

Name: DrayTek  
Password: 123456789

**Guest AP Configurations**

---

Status: Enabled  
Name: guest  
Password: 123456789  
Rate Control: Disabled

- Click **Finish** to complete the wireless settings configuration.

## 2.6 VoIP Wizard

Vigor router offers a quick method to configure settings for VoIP application. Follow the steps listed below.

**Note:** This wizard is available for “V” model only.

1. Open **Wizards>>VoIP Wizard**.

2. The screen of **VoIP Wizard** will be shown as follows.

**VoIP Wizard**

---

**Set VoIP service provider domain**

VoIP service provider	draytel.org	draytel.org (63 char max).
SIP Port	5060	

**Set Account quickly**

Phone 1 (default mapping to Account 1)	
Account Number/Name	--- (63 char max).
Password	(63 char max).
Phone 2 (default mapping to Account 2)	
<input checked="" type="checkbox"/> use the same Account as phone1	
Account Number/Name	--- (63 char max).
Password	(63 char max).

Available settings are explained as follows:

Item	Description
<b>Set VoIP service provider domain</b>	<b>VoIP service provider</b> - Use the drop down list to choose the ISP which offers the VoIP service for your router. <b>SIP Port</b> – Use the default setting (5060).
<b>Set Account quickly</b>	<b>Account Number/Name</b> – Type the account number/name registered to your ISP. <b>Password</b> – Type the password for the account registered to your ISP. <b>Use the same Account as phone 1</b> – If you don't need to configure Phone 2 settings, simply check this box.
<b>Next</b>	Click it to get into the next setting page.

<b>Cancel</b>	Click it to give up the quick start wizard.
---------------	---

- After finished the settings above, click **Next** for viewing summary of such connection.

#### VoIP Wizard

##### Please confirm your settings:

VoIP Service Provider	draytel.org
SIP Port	5060
Phone 1 Account	55683
Phone 2 Account	55683
Click <b>Back</b> to modify changes if necessary. Otherwise, click <b>Finish</b> to save current settings.	

- Click **Finish**. A page of **VoIP Wizard Setup OK!!!** will appear.

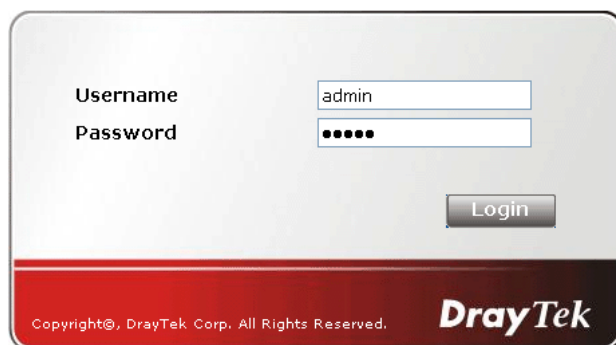

**VoIP Wizard Setup OK!**

## 2.7 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website for getting more service. Please follow the steps below to finish the router registration.

- 1 Please login the web configuration interface of Vigor router by typing “**admin/admin**” as User Name / Password.

The image shows the login page of the Vigor router's web configuration interface. It has a light gray background with a white login box. Inside the box, there are two input fields: 'Username' with 'admin' entered and 'Password' with eight dots. A 'Login' button is at the bottom right of the box. Below the box, there is a red banner with the DrayTek logo and the text 'Copyright©, DrayTek Corp. All Rights Reserved.'

- 2 Click **Support Area>>Production Registration** from the home page.

- 3 A **Login** page will be shown on the screen. Please type the account and password that you created previously. And click **Login**.

Please take a moment to register.

Membership Registration entitles you to upgrade firmware for your purchased product and receive news about upcoming products and services!

The image shows the MyVigor login page. It has an orange header with the word 'LOGIN'. Below the header, there are three input fields: 'UserName : james\_fae', 'Password :', and 'Auth Code : txxhdd'. To the right of the 'Auth Code' field, there is a CAPTCHA image showing the text 't x x h d d'. Below the input fields, there is a link 'If you cannot read the word, click here' and a 'Forgotten password?' link. There is a 'Login' button. At the bottom, there is a link 'Don't have a MyVigor Account ? Create an account now'.

If you are having difficulty logging in, contact our customer service.  
Customer Service : (886) 3 597 2727 or

- 4 The following page will be displayed after you logging in MyVigor. From this page, please click **Add** or **Product Registration**.

- 5 When the following page appears, please type in Nickname (for the router) and choose the right registration date from the popup calendar (it appears when you click on the box of Registration Date). After adding the basic information for the router, please click **Submit**.

- 6 When the following page appears, your router information has been added to the database.

Your device has been successfully added to the database.

- 7 Now, you have finished the product registration.
- 8 After clicking **OK**, you will see the following page. Your router has been registered to *myvigor* website successfully.

If you have not activated web content filter service by using **Service Activation Wizard**, you can activate the service from this step. Please click the serial number link.

- 9 From the **Device's Service** section, click the **Trial**.

- 10 In the following page, check the box of **"I have read and accept the above Agreement"**. The system will find out the date for you to activate this version of service. Then, click **Next**.

- 11 When this page appears, click **Register**.

## Web Configuration

This chapter will guide users to execute web configuration.

1. Open a web browser on your PC and type **http://192.168.1.1**. The window will ask for typing username and password.
2. Please type “admin/admin” on Username/Password for administration operation.

Now, the **Main Screen** will appear. Note that different model will have different web pages.

### 3.1 WAN

**Quick Start Wizard** offers user an easy method to quick setup the connection mode for the router. Moreover, if you want to adjust more settings for different WAN modes, please go to WAN group.

#### 3.1.1 Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

**From 10.0.0.0 to 10.255.255.255**

**From 172.16.0.0 to 172.31.255.255**

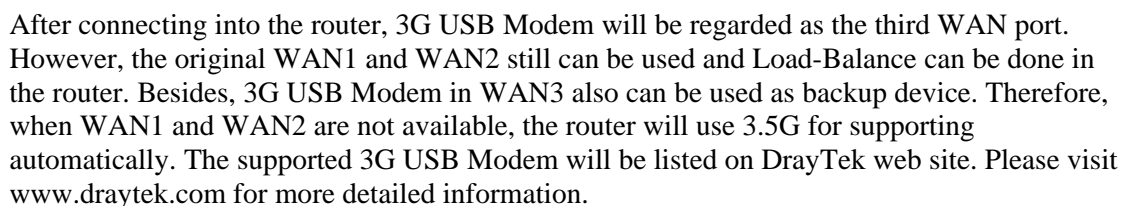

**From 192.168.0.0 to 192.168.255.255**

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

## Network Connection by 3G USB Modem

For 3G mobile communication through Access Point is popular more and more, Vigor2850 adds the function of 3G network connection for such purpose. By connecting 3G USB Modem to the USB port of Vigor2850, it can support HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G standard (HSUPA, etc). Vigor2850n with 3G USB Modem allows you to receive 3G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use four LAN ports on the router to access Internet. Also, they can access Internet via 802.11n wireless function of Vigor2850n, and enjoy the powerful firewall, bandwidth management, VPN features of Vigor2850n series.

## LAN

### 3.1.2 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1, WAN2 and WAN3 in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, Even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN1, WAN2 and WAN3 settings.

This webpage allows you to set general setup for WAN1, WAN2 and WAN3 respectively. In default, WAN2 is disabled. If you want to enable it, simply click the WAN2 link and select **Yes** in the field of **Enable**.

#### WAN >> General Setup

Load Balance Mode:

Setup				
Index	Enable	Physical Mode/Type	Line Speed(Kbps) DownLink/UpLink	Active Mode
<a href="#">WAN1</a>	V	VDSL/-	0 / 0	Always On
<a href="#">WAN2</a>	V	Ethernet/Auto negotiation	0 / 0	Always On
<a href="#">WAN3</a>	V	USB/-	0 / 0	Always On

**Note:**Line Speed only used for load balance mode: according to Line Speed

OK

Available settings are explained as follows:

Item	Description
Load Balance Mode	<p>This option is available for multiple-WAN for getting enough bandwidth for each WAN port. If you know the practical bandwidth for your WAN interface, please choose the setting of <b>According to Line Speed</b>. Otherwise, please choose <b>Auto Weigh</b> to let the router reach the best load balance.</p> <p>Load Balance Mode: <input type="text" value="Auto Weight"/> Auto Weight According to Line Speed</p>
Index	Click the WAN interface link under Index to access into the WAN configuration page.
Enable	V means such WAN interface is enabled and ready to be used.

<b>Physical Mode / Type</b>	Display the physical mode and physical type of such WAN interface.
<b>Line Speed</b>	Display the downstream and upstream rate of such WAN interface.
<b>Active Mode</b>	Display whether such WAN interface is Active device or backup device.
<b>Backup WAN</b>	Display the Backup WAN interface for such WAN when it is disabled.

**Note:** In default, each WAN port is enabled.

## WAN1 with ADSL/VDSL

Vigor router will **detect** the physical line is connected by ADSL or VDSL **automatically**. Therefore, this page allows you to configure settings for ADSL and VDSL at one time. That is, it is not necessary for you to configure different profile settings for ADSL and VDSL respectively.

### WAN >> General Setup

#### WAN 1

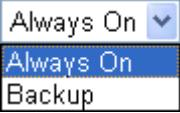

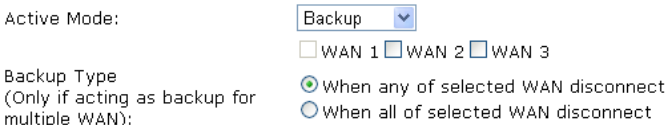

Enable:	Yes <input type="button" value="v"/>	
Display Name:	<input type="text"/>	
Physical Mode:	ADSL	
DSL Mode:	Auto <input type="button" value="v"/>

### 3.1.3 Internet Access

For the router supports multi-WAN function, the users can set different WAN settings (for WAN1/WAN2/WAN3) for Internet Access. Due to different Physical Mode for WAN interface, the Access Mode for these connections also varies. Refer to the following figures.

#### WAN >> Internet Access

Internet Access				
Index	Display Name	Physical Mode	Access Mode	
WAN1		ADSL / VDSL	PPPoE / PPPoA ▼	Details Page IPv6
WAN2		Ethernet	None PPPoE / PPPoA	Details Page IPv6
WAN3		USB	MPoA / Static or Dynamic IP None	Details Page IPv6

**Note :** Only one WAN can support IPv6.

## WAN >> Internet Access

### Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		ADSL / VDSL	PPPoE / PPPoA	Details Page	IPv6
WAN2		Ethernet	Static or Dynamic IP	Details Page	IPv6
WAN3		USB	None PPPoE Static or Dynamic IP PPTP/L2TP	Details Page	IPv6

**Note :** Only one WAN can support IPv6.

## WAN >> Internet Access

### Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		ADSL / VDSL	None	Details Page	IPv6
WAN2		Ethernet	None	Details Page	IPv6
WAN3		USB	None 3G/4G USB Modem(PPP mode)	Details Page	IPv6

**Note :** Only one WAN can support IPv6.

[Advanced](#) You can configure DHCP client options here.

Available settings are explained as follows:

Item	Description
<b>Index</b>	Display the WAN interface.
<b>Display Name</b>	It shows the name of the WAN1/WAN2/WAN3 that entered in general setup.
<b>Physical Mode</b>	It shows the physical connection for WAN1(ADSL/VDSL) /WAN2 (Ethernet) /WAN3 (3G USB Modem) according to the real network connection.
<b>Access Mode</b>	Use the drop down list to choose a proper access mode. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings.
<b>Details Page</b>	This button will open different web page (based on IPv4) according to the access mode that you choose in WAN interface
<b>IPv6</b>	This button will open different web page (based on Physical Mode) to setup IPv6 Internet Access Mode for WAN interface.  If IPv6 service is active on this WAN interface, the color of "IPv6" will become green.

## Advanced

This button allows you to configure DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and configured.

WAN >> Internet Access

### DHCP Client Options Status

Options List								
Enable	Interface	Option	Type	Data				
<div>Enable: <input checked="" type="checkbox"/></div> <div>Interface: <input type="checkbox"/> All <input checked="" type="checkbox"/> WAN1 <input type="checkbox"/> WAN2 <input type="checkbox"/> WAN3 <input type="checkbox"/> WAN4 <input type="checkbox"/> WAN5 <input type="checkbox"/> WAN6 <input type="checkbox"/> WAN7</div> <div>Option Number: <input type="text"/></div> <div>Data Type: <input checked="" type="radio"/> ASCII Character (EX: Option:18, Data:/path) <input type="radio"/> Hexadecimal Digit (EX: Option:18, Data:2f70617468) <input type="radio"/> Address List (EX: Option:44, Data:172.16.2.10,172.16.2.20...)</div> <div>Data: <input type="text"/></div> <div><input type="button" value="Add"/> <input type="button" value="Update"/> <input type="button" value="Delete"/></div>								

#### Note:

Option 61 has been given a default value.  
You can configure option 61(Client Identifier) in "WAN >> Interface Access" page.  
If you choose to configure option 61 here, the settings in "WAN >> Interface Access,Details Page" will be overwritten.  
Option 12 is reserved, you cannot configure it here but you can configure it in "Router Name" field of "WAN >> Interface Access".

**Enable/Disable** – Enable/Disable the function of DHCP Option. Each DHCP option is composed by an option number with data. For example,

Option number:100

Data: abcd

When such function is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

**Interface** – Specify the WAN interface(s) that will be overwritten by such function. WAN5 ~ WAN7 can be located under **WAN>>Multi-PVCs**.

**Option Number** – Type a number for such function.

**Note:** If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

**Data Type** – Choose the type (ASCII or Hex) for the data to be stored.

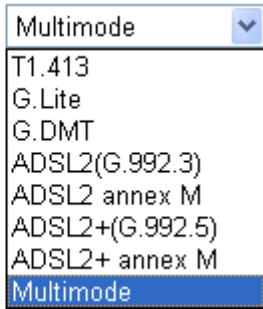

**Data** – Type the content of the data to be processed by the function of DHCP option.

To choose PPPoE /PPPoA as the accessing protocol of the Internet, please select **PPPoE/PPPoA** from the **WAN>>Internet Access >>WAN1** page. The following web page will be shown.

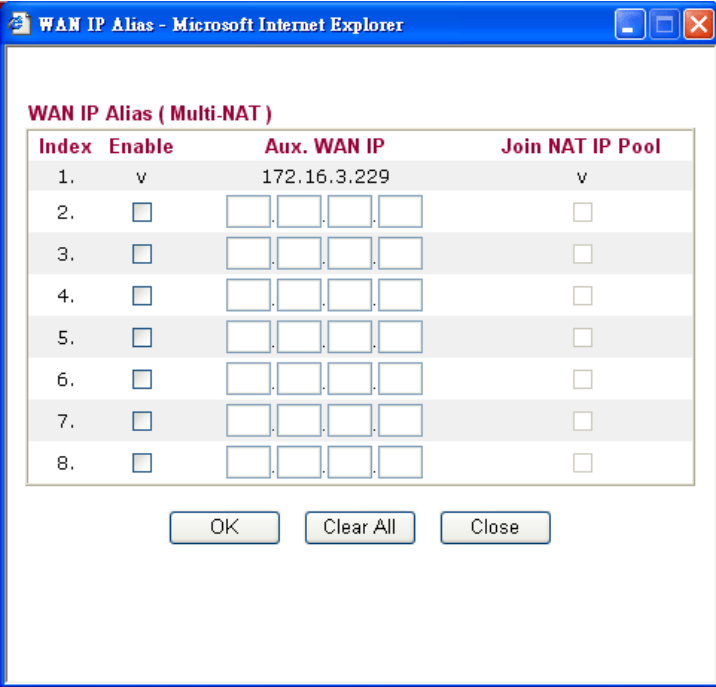

WAN 1

Available settings are explained as follows:

Vigor2850 Series User's Guide

	<p>settings in this group.</p> <p><b>Modulation</b> –Default setting is Multimode. Choose the one that fits the requirement of your router.</p> <p>Modulation</p> 
<b>PPPoE Pass-through</b>	<p>The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router. When PPPoA protocol is selected, the PPPoE package transmitted by PC will be transformed into PPPoA package and sent to WAN server. Thus, the PC can access Internet through such direction.</p> <p><b>For Wired LAN</b> – If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet.</p> <p><b>For Wireless LAN</b> – If you check this box, PCs on the same wireless network can use another set of PPPoE session (different with the Host PC) to access into Internet.</p> <p><b>Note:</b> To have PPPoA Pass-through, please choose PPPoA protocol and check the box(es) here. The router will behave like a modem which only serves the PPPoE client on the LAN. That's, the router will offer PPPoA dial-up connection.</p>
<b>WAN Connection Detection</b>	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p><b>Mode</b> – Choose <b>ARP Detect</b> or <b>Ping Detect</b> for the system to execute for WAN detection.</p> <p><b>Ping IP</b> – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging.</p> <p><b>TTL (Time to Live)</b> – Displays value for your reference. TTL value is set by telnet command.</p>
<b>MTU</b>	<p>It means Max Transmit Unit for packet. The default setting is 1442.</p>
<b>ISP Access Setup</b>	<p>Enter your allocated username, password and authentication parameters according to the information provided by your ISP.</p> <p><b>Username</b> – Type in the username provided by ISP in this field.</p> <p><b>Password</b> – Type in the password provided by ISP in this field.</p> <p><b>Separate Account for ADSL</b> – In default, WAN1 supports VDSL/ADSL and uses the same PPPoE account and</p>

	<p>password for connection. If required, you can configure another account and password for ADSL connection by checking this box. If it is checked, the system will ask you to type another group of account and password additionally.</p> <p><b>PPP Authentication</b> – Select <b>PAP only</b> or <b>PAP or CHAP</b> for PPP. If you want to connect to Internet all the time, you can check <b>Always On</b>.</p> <p><b>Idle Timeout</b> – Set the timeout for breaking down the Internet after passing through the time without any action.</p>
<b>IP Address From ISP</b>	<p>Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function.</p> <p><b>WAN IP Alias</b> - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p><b>Fixed IP</b> – Click <b>Yes</b> to use this function and type in a fixed IP address in the box of <b>Fixed IP Address</b>.</p> <p><b>Default MAC Address</b> – You can use <b>Default MAC Address</b> or specify another MAC address by typing on the boxes of MAC Address for the router.</p> <p><b>Specify a MAC Address</b> – Type the MAC address for the router manually.</p> <p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Applications &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

After finishing all the settings here, please click **OK** to activate them.

## Details Page for MPoA/Static or Dynamic IP in WAN1

MPoA is a specification that enables ATM services to be integrated with existing LANs, which use either Ethernet, token-ring or TCP/IP protocols. The goal of MPoA is to allow different LANs to send packets to each other via an ATM backbone.

To use **MPoA/Static or Dynamic IP** as the accessing protocol of the Internet, select **MPoA /Static or Dynamic IP** from the **WAN>>Internet Access >>WAN1** page. The following web page will appear.

If you want to connect to Internet all the time, you can check <b>Always On</b>.</p> <p><b>Idle Timeout</b> – Set the timeout for breaking down the Internet after passing through the time without any action.</p>

## IP Address Assignment Method (IPCP)

Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function.

**WAN IP Alias** - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using. Type the additional WAN IP address and check the Enable box. Then click **OK** to exit the dialog.

### WAN2 IP Alias ( Multi-NAT )

Index	Enable	Aux. WAN IP	Join NAT IP Pool

Clear All

Close

**Fixed IP** – Click **Yes** to use this function and type in a fixed IP address in the box of **Fixed IP Address**.

**Default MAC Address** – You can use **Default MAC Address** or specify another MAC address by typing on the boxes of MAC Address for the router.

**Specify a MAC Address** – Type the MAC address for the router manually.

After finishing all the settings here, please click **OK** to activate them.

## Details Page for Static or Dynamic IP in WAN2

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

Available settings are explained as follows:

Item	Description
<b>PPTP/L2TP</b>	<p><b>Enable PPTP</b>- Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p><b>Enable L2TP</b> - Click this radio button to enable a L2TP</p>

	<p>client to establish a tunnel to a DSL modem on the WAN interface.</p> <p><b>Disable</b> – Click this radio button to close the connection through PPTP or L2TP.</p> <p><b>Server Address</b> - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.</p> <p><b>Specify Gateway IP Address</b> – Specify the gateway IP address for DHCP server.</p>
<b>ISP Access Setup</b>	<p><b>Username</b> -Type in the username provided by ISP in this field.</p> <p><b>Password</b> -Type in the password provided by ISP in this field.</p> <p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>
<b>ISDN Dial Backup Setup</b>	<p><b>This setting is only available for the router supporting ISDN function.</b></p>  <p>Before utilizing the ISDN dial backup feature, you must create a dial backup profile first. Please click <b>ISDN &gt; Dialing to a Single ISP</b> to create the backup profile.</p>  <p><b>None</b> - Disable the backup function.</p> <p><b>Packet Triggering</b> -The backup line is not on until a packet from a local host triggers the router to establish a connection.</p>
<b>MTU</b>	<p>It means Max Transmit Unit for packet. The default setting is 1442.</p>
<b>PPP Setup</b>	<p><b>PPP Authentication</b> - Select <b>PAP only</b> or <b>PAP or CHAP</b> for PPP.</p> <p><b>Idle Timeout</b> - Set the timeout for breaking down the Internet after passing through the time without any action.</p>
<b>IP Address Assignment Method(IPCP)</b>	<p><b>WAN IP Alias</b> - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>

<

After finishing all the settings here, please click **OK** to activate them.

## Details Page for 3G/4G USB Modem(PPP mode) in WAN3

To use **PPP** (for 3G/4G USB Modem) as the accessing protocol of the internet, please choose **Internet Access** from **WAN** menu. Then, select **3G/4G USB Modem(PPP mode)** mode for WAN3. The following web page will be shown.

WAN >> Internet Access

### WAN 3

<b>3G/4G USB Modem(PPP mode)</b>		<input type="radio"/> Enable <input checked="" type="radio"/> Disable
SIM PIN code	<input type="text"/>	
Modem Initial String	<input type="text" value="AT&amp;FE0V1X1&amp;D2&amp;C1S0=0"/> (Default:AT&FE0V1X1&D2&C1S0=0)	
APN Name	<input type="text"/>	<input type="button" value="Apply"/>
Modem Initial String2	<input type="text" value="AT"/>	
Modem Dial String	<input type="text" value="ATDT*99#"/> (Default:ATDT*99#, CDMA:ATDT#777, TD-SCDMA:ATDT*98*1#)	
PPP Username	<input type="text"/>	(Optional)
PPP Password	<input type="text"/>	(Optional)
PPP Authentication	<input type="text" value="PAP or CHAP"/>	
Index(1-15) in <b>Schedule</b> Setup: => <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>		
<b>WAN Connection Detection</b>		
Mode	<input type="text" value="ARP Detect"/>	
Ping IP	<input type="text"/>	
TTL:	<input type="text"/>	

Available settings are explained as follows:

Item	Description
<b>Enable / Disable</b>	Click <b>Enable</b> for activating this function. If you click <b>Disable</b> , this function will be closed and all the settings that you adjusted in this page will be invalid.
<b>SIM PIN code</b>	Type PIN code of the SIM card that will be used to access Internet.
<b>Modem Initial String</b>	Such value is used to initialize USB modem. Please use the default value. If you have any question, please contact to your ISP.
<b>APN Name</b>	APN means Access Point Name which is provided and required by some ISPs. Type the name and click Apply.
<b>Modem Initial String2</b>	The initial string 1 is shared with APN. In some cases, user may need another initial AT command to restrict 3G band or do any special settings.
<b>Modem Dial String</b>	Such value is used to dial through USB mode. Please use the default value. If you have any question, please contact to your ISP.
<b>PPP Username</b>	Type the PPP username (optional).

<b>PPP Password</b>	Type the PPP password (optional).
<b>PPP Authentication</b>	Select <b>PAP only</b> or <b>PAP or CHAP</b> for PPP.
<b>Index (1-15) in Schedule Setup</b>	You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page
<b>WAN Connection Detection</b>	Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.  <b>Mode</b> – Choose <b>ARP Detect</b> or <b>Ping Detect</b> for the system to execute for WAN detection.  <b>Ping IP</b> – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging.  <b>TTL (Time to Live)</b> – Displays value for your reference. TTL value is set by telnet command.

### Details Page for IPv6 – Offline in WAN1/WAN2/WAN3

When Offline is selected, the IPv6 connection will be disabled.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b> Connection Type <span>Offline ▼</span>			

OK Cancel

### Details Page for IPv6 – PPP in WAN1/WAN2

During the procedure of IPv4 PPPoE connection, we can get the IPv6 Link Local Address between the gateway and Vigor router through IPv6CP. Later, use DHCPv6 or Accept RA to acquire the IPv6 prefix address (such as: 2001:B010:7300:200::/64) offered by the ISP. In addition, PCs under LAN also can have the public IPv6 address for Internet access by means of the generated prefix.

No need to type any other information for PPP mode.

## WAN >> Internet Access

### WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b>			
Connection Type		PPP	
<b>Note :</b> IPv4 WAN setting should be <b>PPPoE</b> client.			

OK

Cancel

Below shows an example for successful IPv6 connection based on PPPoE mode.

### Online Status

Physical Connection				System Uptime: 0:0:30	
IPv4		IPv6			
LAN Status					
IP Address					
2001:B010:7300:200:21D:AAFF:FE7A:3E58/64 (Global)					
FE80::21D:AAFF:FE7A:3E58/64 (Link)					
TX Packets		RX Packets		TX Bytes	
7		8		618	
				RX Bytes	
				672	
WAN2 IPv6 Status					
Enable		Mode		Up Time	
Yes		PPP		0:00:11	
IP		Gateway IP			
2001:B010:7300:200:21D:AAFF:FE7A:3E5A/128 (Global)		FE80::90:1A00:242:AD52			
FE80::1D:AAFF:FE7A:3E5A/128 (Link)					
DNS IP					
2001:B000:168::1					
2001:B000:168::2					
TX Packets		RX Packets		TX Bytes	
7		4		544	
				RX Bytes	
				616	

**Note:** At present, the **IPv6 prefix** can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

## Details Page for IPv6 – TSPC in WAN1/WAN2/WAN3

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

## WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b> Connection Type: TSPC			
<b>TSPC Configuration</b> Username: <input type="text"/> Password: <input type="password"/> Confirm Password: <input type="password"/> Tunnel Broker: <input type="text"/>			
<div>OK Cancel</div>			

Available settings are explained as follows:

Item	Description
Username	Type the name obtained from the broker. It is suggested for you to apply another username and password for <a href="http://gogonet.gogo6.com/page/freenet6-account">http://gogonet.gogo6.com/page/freenet6-account</a> .
Password	Type the password assigned with the user name.
Confirm Password	Type the password again to make the confirmation.
Tunnel Broker	Type the address for the tunnel broker IP, FQDN or an optional port number.

## Details Page for IPv6 – AICCU in WAN1/WAN2/WAN3

## WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b> Connection Type: AICCU			
<b>AICCU Configuration</b> <input type="checkbox"/> Always On Username: <input type="text"/> Password: <input type="password"/> Confirm Password: <input type="password"/> Tunnel Broker: tic.sixxs.net Subnet Prefix: <input type="text"/> / <input type="text"/>			
<p><b>Note :</b> If "Always On" is not enabled,AICCU connection would only retry three times.</p> <div>OK Cancel</div>			

Available settings are explained as follows:

Item	Description
<b>Username</b>	Type the name obtained from the broker. Please apply new account at <a href="http://www.sixxs.net/">http://www.sixxs.net/</a> . It is suggested for you to apply another username and password.
<b>Password</b>	Type the password assigned with the user name.
<b>Confirm Password</b>	Type the password again to make the confirmation.
<b>Tunnel Broker</b>	Type the address for the tunnel broker IP, FQDN or an optional port number.
<b>Subnet Prefix</b>	Type the subnet prefix address getting from service provider

## Details Page for IPv6 – DHCPv6 Client in WAN1/WAN2

DHCPv6 client mode would use DHCPv6 protocol to obtain IPv6 address from server.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP	IPv6
<p><b>Internet Access Mode</b></p> <p>Connection Type <span style="float: right;">DHCPv6 Client ▼</span></p> <p><b>DHCPv6 Client Configuration</b></p> <p>Identity Association <input checked="" type="radio"/> Prefix Delegation <input type="radio"/> Non-temporary Address</p> <p>IAID (Identity Association ID) <input type="text" value="4103699993"/></p> <p style="text-align: center;"> <input type="button" value="OK"/> <input type="button" value="Cancel"/> </p>			

Available settings are explained as follows:

Item	Description
<b>Identify Association</b>	Choose <b>Prefix Delegation</b> or <b>Non-temporary Address</b> as the identify association.
<b>IAID</b>	Type a number as IAID.

## Details Page for IPv6 – Static IPv6 in WAN1/WAN2

This type allows you to setup static IPv6 address for WAN interface.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
-------	----------------------	------	------

**Internet Access Mode**  
Connection Type: Static IPv6

**Current IPv6 Address Table**

Index	IPv6 Address/Prefix Length	Scope
-------	----------------------------	-------

**Static IPv6 Gateway configuration**  
IPv6 Gateway Address:

Available settings are explained as follows:

Item	Description
Static IPv6 Address configuration	<b>IPv6 Address</b> – Type the IPv6 Static IP Address. <b>Prefix Length</b> – Type the fixed value for prefix length. <b>Add</b> – Click it to add a new entry. <b>Delete</b> – Click it to remove an existed entry.
Current IPv6 Address Table	Display current interface IPv6 address.
Static IPv6 Gateway Configuration	<b>IPv6 Gateway Address</b> - Type your IPv6 gateway address here.

## Details Page for IPv6 – 6in4 Static Tunnel in WAN1/WAN2

This type allows you to setup 6in4 Static Tunnel for WAN interface.

Such mode allows the router to access IPv6 network through IPv4 network.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than any cast endpoint. The mode has more reliability.

## WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b>			
Connection Type		6in4 Static Tunnel ▼	
<b>6in4 Static Tunnel</b>			
Remote Endpoint IPv4 Address		<input type="text"/>	
6in4 IPv6 Address		<input type="text"/>	/ 64 (default:64)
LAN Routed Prefix		<input type="text"/>	/ 64 (default:64)
Tunnel TTL		255 (default:255)	
OK		Cancel	

Available settings are explained as follows:

Item	Description
<b>Remote Endpoint IPv4 Address</b>	Type the static IPv4 address for the remote server.
<b>6in4 IPv6 Address</b>	Type the static IPv6 address for IPv4 tunnel with the value for prefix length.
<b>LAN Routed Prefix</b>	Type the static IPv6 address for LAN routing with the value for prefix length.
<b>Tunnel TTL</b>	Type the number for the data lifetime in tunnel.

After finished the above settings, click **OK** to save the settings.

Below shows an example for successful IPv6 connection based on 6in4 Static Tunnel mode.

If you choose VoIP, the configuration for this PVC will be effective for VoIP data transmitting and receiving.</p>
--	--

For other settings, refer to **Details Page for PPPoE/PPPoA in WAN1**.

## ATM QoS

Such configuration is applied to upstream packets. Such information will be provided by ISP. Please contact with your ISP for detailed information.

### WAN >> Multi-PVCs

#### Multi-PVCs

General	ATM QoS	Port-based Bridge	PVC to PVC Binding/Add Tag	
Channel	QoS Type	PCR	SCR	MBS
1.	UBR	0	0	0
2.	UBR	0	0	0
3.	UBR	0	0	0
4.	UBR	0	0	0
5.	UBR	0	0	0
6.	UBR	0	0	0
7.	UBR	0	0	0
8.	UBR	0	0	0

Note: 1.Set 0 means default value.

2.PCR(max) = ADSL Up Speed / 53 / 8.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>QoS Type</b>	<p>Select a proper QoS type for the channel according to the information that your ISP provides.</p> <p>UBR</p> <p>CBR</p> <p>ABR</p> <p>rtVBR</p> <p>ntVBR</p>
<b>PCR</b>	It represents Peak Cell Rate. The default setting is "0".
<b>SCR</b>	It represents Sustainable Cell Rate. The value of SCR must be smaller than PCR.
<b>MBS</b>	It represents Maximum Burst Size. The range of the value is 10 to 50.

## Port-based Bridge

General page lets you set the first PVC. As to set the second PVC line, please click the **Port-based Bridge** tab to open Bridge configuration page.

#### WAN >> Multi-PVCs

##### Multi-PVCs

Channel	Enable	P1	P2	P3	P4	Service Type
1.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
2.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
3.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
4.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
5.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
6.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
7.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal
8.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Normal

Note: 1.Channel 1 to 2 are reserved for Nat/Route use.  
2.P1 is reserved for Nat/Route use.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable that channel. Only channel 3 to 8 can be set in this page, for channel 1 to 2 are reserved for NAT using.
<b>P1 to P4</b>	It means the LAN port 1 to 4. Check the box to designate the LAN port for channel 3 to 8.
<b>Service Type</b>	<p>Normally, service type is used for the service of video stream (e.g., IPTV). It can divide the packets from remote control and from video stream into different PVC. Such feature is used for specific application. Please choose <b>Normal</b> as the <b>Service Type</b>.</p> <p><b>Normal</b> – It means that the PVC can accept all packets.</p> <p><b>IGMP</b> –It means that such PVC can accept IGMP packets only. Such type just meets a specific environment on some ISPs. Data and IGMP packets will be transmitted and received with different PVC.</p>
<b>Add Tag</b>	To identify the usage of PVC, check this box to invoke this setting. And type the number for VLAN ID (number).
<b>Priority</b>	To add the packet priority number for such VLAN. The range is from 0 to 7.

Click **Clear** to remove all the configurations in this page if you do not satisfy it. When you finish the configuration, please click **OK** to save and exit this page. Or click **Cancel** to abort the configuration and exit this page.

### PVC to PVC Binding/Add Tag

This feature can direct certain services (such as Internet, IPTV and so on) from other channels into a single channel.

## Multi-PVCs

General	ATM QoS	Port-based Bridge	PVC to PVC Binding/Add Tag	
Channel	PVC Binding		Add Tag	Priority
1.	Disable	<input type="checkbox"/>	0	0
2.	Disable	<input type="checkbox"/>	0	0
3.	Disable	<input type="checkbox"/>	0	0
4.	Disable	<input type="checkbox"/>	0	0
5.	1	<input type="checkbox"/>	0	0
6.	2	<input type="checkbox"/>	0	0
7.	3	<input type="checkbox"/>	0	0
8.	4	<input type="checkbox"/>	0	0
	5	<input type="checkbox"/>	0	0
	6	<input type="checkbox"/>	0	0
	7	<input type="checkbox"/>	0	0

Note: Multiple channels may use the same channel link through the PVC Binding configuration.  
PVC to PVC Binding only supports PPPoE and MPoA 1483 Bridge mode.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>PVC Binding</b>	Data transmitted through the selected channel will be redirected and transmitted via the channel configured in the field of PVC Binding.
<b>Add Tag</b>	To identify the usage of PVC, check this box to invoke this setting. And type the number for VLAN ID (number).
<b>Priority</b>	To add the packet priority number for such VLAN. The range is from 0 to 7.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.1.5 Multi-VLAN

This router allows you to create multi-VLAN for different data transferring for using. Simply go to **WAN** and select **Multi-VLAN**.

#### General

The system allows you to set up to eight channels for multi-VLAN.

General		Bridge	
Channel	Enable	Add Tag	Priority
1.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
2.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
3.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
4.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
5.	<input type="checkbox"/>	<u>WAN</u>	<input type="text" value="0"/>
6.	<input type="checkbox"/>	<u>WAN</u>	<input type="text" value="0"/>
7.	<input type="checkbox"/>	<u>WAN</u>	<input type="text" value="0"/>
8.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>

- Note:**
1. Tag value must be set between 1 ~ 4095 and unique for each channel.
  2. Only one channel can be untagged (equal to 0) at a time.
  3. Channel 1 and channel 2 are reserved for NAT/Route application.
  4. Channel 5 to channel 8 can be used for Router-borne application.

OK Clear

Available settings are explained as follows:

Item	Description
Channel	Display the number of each channel.
Enable	Check this box to enable that channel. The channels that you enabled here will be shown in the <b>Multi-VLAN</b> channel drop down list on the web page of <b>Internet Access</b> . Though you can enable eight channels in this page, yet only one channel can be chosen on the web page of <b>Internet Access</b> .
Add Tag	To identify the usage of VLAN, check this box to invoke this setting. And type the number for VLAN ID (number).
Priority	To add the packet priority number for such VLAN. The range is from 0 to 7.

WAN link for Channel 5, 6 and 7 are provided for router-borne application such as **TR-069**. The settings must be applied and obtained from your ISP. For your special request, please contact with your ISP and then click WAN link of Channel 5, 6 or 7 to configure your router.

**WAN >> Multi-VLAN >> PVC Channel 5**

**WAN for Router-borne Application:** Management ▾

<p><b>PPPoE/PPPoA Client</b> <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p><b>ISP Access Setup</b></p> <p>ISP Name <input type="text"/></p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p>PPP Authentication <input type="text" value="PAP or CHAP"/></p> <p><input checked="" type="checkbox"/> Always On</p> <p>Idle Timeout <input type="text" value="-1"/> second(s)</p> <p><b>IP Address From ISP</b></p> <p>Fixed IP <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)</p> <p>Fixed IP Address <input type="text"/></p>	<p><b>Static or Dynamic IP</b> <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p><b>WAN IP Network Settings</b></p> <p><input type="radio"/> Obtain an IP address automatically</p> <p>Router Name <input type="text" value="Vigor"/> *</p> <p>Domain Name <input type="text"/> *</p> <p><small>*: Required for some ISPs</small></p> <p><input checked="" type="radio"/> Specify an IP address</p> <p>IP Address <input type="text"/></p> <p>Subnet Mask <input type="text"/></p> <p>Gateway IP Address <input type="text"/></p> <p><b>DNS Server IP Address</b></p> <p>Primary IP Address <input type="text"/></p> <p>Secondary IP Address <input type="text"/></p>
--	--

OK Cancel

Available settings are explained as follows:

Item	Description
<b>WAN for Router-borne Application</b>	<p>Choose the router service for channel 5, 6 or 7.</p> <p><b>Management</b> - It can be specified for general management (Web configuration/telnet/TR069). If you choose Management, the configuration for this VLAN will be effective for Web configuration/telnet/TR069.</p> <p><b>VoIP</b> - It can be specified for VoIP only. If you choose VoIP, the configuration for this VLAN will be effective for VoIP data transmitting and receiving.</p> <p><b>IPTV</b> - It can be specified for IPTV only. If you choose IPTV, the configuration for this VLAN will be effective for IPTV data transmitting and receiving.</p>

For other settings, refer to **Details Page for PPPoE in WAN1**.

## Bridge

General page lets you set the first channel. As to set the third channel, please click the **Bridge** tab to open **Bridge** configuration page.

WAN >> Multi-VLAN

General		Bridge				
Channel	Enable	P1	P2	P3	P4	Transport VLAN
1.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Note:** P1 is reserved for Nat/Route use.

The Transport VLAN checkbox setting will allow port-based bridge packets to keep their VLAN headers when sent to LAN ports.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable that channel. Only channel 3 to 8 can be set in this page, for channel 1 to 2 are reserved for NAT using.
<b>P1 to P4</b>	It means the LAN port 1 to 4. Check the box to designate the LAN port for channel 3 to 8.
<b>Transport VLAN</b>	It allows port-based bridge packets to keep VLAN headers while sent to LAN ports.

Click **Clear** to remove all the configurations in this page if you do not satisfy it. When you finish the configuration, please click **OK** to save and exit this page.

## 3.2 LAN

Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

### 3.2.1 Basics of LAN

The most generic function of Vigor router is NAT. It creates a private subnet of your own. As mentioned previously, the router will talk to other public hosts on the Internet by using public IP address and talking to local hosts by using its private IP address. What NAT does is to translate the packets from public IP address to private IP address to forward the right packets to the right host and vice versa. Besides, Vigor router has a built-in DHCP server that assigns private IP address to each local host. See the following diagram for a briefly understanding.

In some special case, you may have a public IP subnet from your ISP such as 220.135.240.0/24. This means that you can set up a public subnet or call second subnet that each host is equipped with a public IP address. As a part of the public subnet, the Vigor router will serve for IP routing to help hosts in the public subnet to communicate with other public hosts or servers outside. Therefore, the router should be set as the gateway for public hosts.

## What is Routing Information Protocol (RIP)

Vigor router will exchange routing information with neighboring routers using the RIP to accomplish IP routing. This allows users to change the information of the router such as IP address and the routers will automatically inform for each other.

## What is Static Route

When you have several subnets in your LAN, sometimes a more effective and quicker way for connection is the **Static routes** function rather than other method. You may simply set rules to

forward data from one specified subnet to another specified subnet without the presence of RIP.

### What are Virtual LANs and Rate Control

You can group local hosts by physical ports and create up to 4 virtual LANs. To manage the communication between different groups, please set up rules in Virtual LAN (VLAN) function and the rate of each.

### 3.2.2 General Setup

This page provides you the general settings for LAN. Click **LAN** to open the LAN settings page and choose **General Setup**.

There are four subnets provided by the router which allow users to divide groups into different subnets (LAN1 – LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 – LAN4 can be operated under **NAT** or **Route** mode. IP Routed Subnet can be operated under Route mode.

## LAN >> General Setup

### General Setup

Index	Status	DHCP	IP Address		
LAN 1	V	-	192.168.1.1	<a href="#">Details Page</a>	<a href="#">IPv6</a>

**Note:** LAN 2/3/4 are available when VLAN is enabled.

[OK](#)

Available settings are explained as follows:

Item	Description
<b>General Setup-----</b>	<p>Allow to configure settings for each subnet respectively.</p> <p><b>Index</b> - Display all of the LAN items.</p> <p><b>Status</b>- Basically, LAN1 status is enabled in default. LAN2, LAN3, LAN3 and IP Routed Subnet can be observed by checking the box of <b>Status</b>.</p> <p><b>DHCP</b>- LAN1 is configured with DHCP in default. If required, please check the DHCP box for each LAN.</p> <p><b>IP Address</b> - Display the IP address for each LAN item. Such information is set in default and you can not modify it.</p> <p><b>Details Page</b> - Click it to access into the setting page. Each LAN will have different LAN configuration page. <b>Each LAN must be configured in different subnet.</b></p> <p><b>IPv6</b> – Click it to access into the settings page of IPv6.</p>

<p><b>Advanced</b></p>	<p>DHCP packets can be processed by adding option number and data information when such function is enabled.</p> <p>LAN &gt;&gt; General Setup</p>  <p>Note: Maximum number of custom DHCP option is five.</p> <p>OK</p> <p><b>Enable/Disable</b> – Enable/Disable the function of DHCP Option. Each DHCP option is composed by an option number with data. For example,  Option number: 100  Data: abcd</p> <p>When such function is enabled, the specified values for DHCP option will be seen in DHCP reply packets.</p> <p><b>Option Number</b> – Type a number for such function.</p> <p><b>DataType</b> – Choose the type (ASCII or Hex) for the data to be stored.</p> <p><b>Data</b> – Type the content of the data to be processed by the function of DHCP option.</p>
<p><b>Force router to use DNS server IP address .....</b></p>	<p>Force Vigor router to use DNS servers configured in LAN1/LAN2/LAN3/LAN4 instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).</p>
<p><b>Inter-LAN Routing</b></p>	<p>Check the box to link two or more different subnets (LAN and LAN).</p>

## Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information.

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
<b>Network Configuration</b> For NAT Usage IP Address <input type="text" value="192.168.1.1"/> Subnet Mask <input type="text" value="255.255.255.0"/> RIP Protocol Control <input type="button" value="Disable"/> <input type="button" value="v"/> Note: Disable LAN & Enable LAN shouldn't be in the same subnet.	<b>DHCP Server Configuration</b> <input type="radio"/> Enable Server <input checked="" type="radio"/> Disable Server <input type="checkbox"/> Enable Relay Agent Start IP Address <input type="text" value="192.168.1.10"/> IP Pool Counts <input type="text" value="50"/> Gateway IP Address <input type="text" value="192.168.1.1"/> Lease Time <input type="text" value="259200"/> (s) <input type="checkbox"/> Retrieve IPs from inactive clients periodically <b>DNS Server IP Address</b> Primary IP Address <input type="text"/> Secondary IP Address <input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Network Configuration</b>	<p><b>For NAT Usage,</b></p> <p><b>IP Address</b> - Type in private IP address for connecting to a local private network (Default: 192.168.1.1).</p> <p><b>Subnet Mask</b> - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24)</p> <p><b>RIP Protocol Control - Disable</b> - deactivate the RIP protocol. It will lead to a stoppage of the exchange of routing information between routers. (Default)</p> <p><b>Enable</b> – activate the RIP protocol.</p>
<b>DHCP Server Configuration</b>	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p><b>Enable Server</b> - Let the router assign IP address to every host in the LAN.</p> <p><b>Disable Server</b> – Let you manually assign IP address to every host in the LAN.</p> <p><b>Enable Relay Agent</b> –Specify which subnet that DHCP server is located the relay agent should redirect the DHCP request to.</p> <ul style="list-style-type: none"> <li>● <b>DHCP Server IP Address for Relay Agent</b> - Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.</li> </ul> <p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If</p>

	<p>the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Gateway IP Address</b> - Enter a value of the gateway IP address for the DHCP server. The value is usually as same as the 1st IP address of the router, which means the router is the default gateway.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Retrieve IPs from inactive clients periodically</b> - Whenever a DHCP client requests an IP address from the LAN DHCP server, the server will give out an IP to this client for a certain amount of time (e.g., 1 day). However, even if this client only uses the IP for say 5 minutes, the server still "reserves" 1 day for that client. Because a DHCP server only has a limited number of IPs to lease to its DHCP clients, soon enough all the IPs will be used out and then no one will be able to get any IPs from this server anymore. Therefore, this feature is used to get the IP back from inactive clients (i.e. doesn't use the IP but the server still reserves the IP for him).</p>																
<b>DNS Server IP Address</b>	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p><b>Primary IP Address</b> -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. If your ISP does not provide it, the router will automatically apply default DNS Server IP address: 194.109.6.66 to this field.</p> <p><b>Secondary IP Address</b> - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. If your ISP does not provide it, the router will automatically apply default secondary DNS Server IP address: 194.98.0.1 to this field.</p> <p>The default DNS Server IP address can be found via Online Status:</p> <table><tr><th colspan="3">System Status</th><th>System Uptime: 71:4</th></tr><tr><td>LAN Status</td><td colspan="2">Primary DNS: 194.109.6.66</td><td>Secondary DNS: 168.95.1.1</td></tr><tr><td>IP Address</td><td>TX Packets</td><td colspan="2">RX Packets</td></tr><tr><td>192.168.1.1</td><td>347390</td><td colspan="2">214004</td></tr></table> <p>If both the Primary IP and Secondary IP Address fields are left empty, the router will use the DNS server assigned by ISP. If not, the router will assign its own IP address to local users as a DNS proxy server.</p>	System Status			System Uptime: 71:4	LAN Status	Primary DNS: 194.109.6.66		Secondary DNS: 168.95.1.1	IP Address	TX Packets	RX Packets		192.168.1.1	347390	214004	
System Status			System Uptime: 71:4														
LAN Status	Primary DNS: 194.109.6.66		Secondary DNS: 168.95.1.1														
IP Address	TX Packets	RX Packets															
192.168.1.1	347390	214004															

When you finish the configuration, please click **OK** to save and exit this page.

## Details Page for LAN1 – IPv6 Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup

LAN 1 IPv6 Setup

**RADVD Configuration**  
☐ Enable ☒ Disable  
Advertisement Lifetime  Seconds (Range : 600 - 9000)

**DHCPv6 Server Configuration**  
☐ Enable Server ☒ Disable Server  
Start IPv6 Address   
End IPv6 Address   
**DNS Server IPv6 Address**  
Primary DNS Server   
Secondary DNS Server

**Static IPv6 Address configuration**  
IPv6 Address  / Prefix Length   
   
**Current IPv6 Address Table**

Index	IPv6 Address/Prefix Length	Scope
1	FE80::250:7FFF:FEEA:7EC8/64	Link

It provides 2 daemons for LAN side IPv6 address configuration. One is **RADVD**(stateless) and the other is **DHCPv6 Server** (Stateful).

Available settings are explained as follows:

Item	Description
<b>RADVD Configuration</b>	<p><b>Enable</b> – Click it to enable RADVD server. The router advertisement daemon (radvd) sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.</p> <p><b>Disable</b> – Click it to disable RADVD server.</p> <p><b>Advertisement Lifetime</b> - The lifetime associated with the default router in units of seconds. It's used to control the lifetime of the prefix. The maximum value corresponds to 18.2 hours. A lifetime of 0 indicates that the router is not a default router and should not appear on the default router</p>

	list.
<b>DHCPv6 Server Configuration</b>	<p><b>Enable Server</b> –Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p> <p><b>Disable Server</b> –Click it to disable DHCPv6 server.</p> <p><b>Start IPv6 Address / End IPv6 Address</b> –Type the start and end address for IPv6 server.</p>
<b>DNS Server IPv6 Address</b>	<p><b>Primary DNS Server</b> – Type the IPv6 address for Primary DNS server.</p> <p><b>Secondary DNS Server</b> –Type another IPv6 address for DNS server if required.</p>
<b>Static IPv6 Address configuration</b>	<p><b>IPv6 Address</b> –Type static IPv6 address for LAN.</p> <p><b>Prefix Length</b> – Type the fixed value for prefix length.</p> <p><b>Add</b> – Click it to add a new entry.</p> <p><b>Delete</b> – Click it to remove an existed entry.</p>
<b>Current IPv6 Address Table</b>	Display current used IPv6 addresses.

When you finish the configuration, please click **OK** to save and exit this page.

Available settings are explained as follows:

Item	Description
Network Configuration	<p><b>Enable/Disable</b> - Click <b>Enable</b> to enable such configuration; click <b>Disable</b> to disable such configuration.</p> <p><b>For NAT Usage</b> - Click this radio button to invoke NAT function.</p> <p><b>For Routing Usage</b> - Click this radio button to invoke this function.</p> <p><b>IP Address</b> - Type in private IP address for connecting to a local private network (Default: 192.168.1.1).</p> <p><b>Subnet Mask</b> - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24)</p>
DHCP Server Configuration	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p><b>Enable Server</b> - Let the router assign IP address to every host in the LAN.</p> <p><b>Disable Server</b> – Let you manually assign IP address to every host in the LAN.</p> <p><b>Enable Relay Agent</b> - If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <ul style="list-style-type: none"><li>● <b>DHCP Server IP Address for Relay Agent</b> - Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.</li></ul>

	<p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Gateway IP Address</b> - Enter a value of the gateway IP address for the DHCP server. The value is usually as same as the 1st IP address of the router, which means the router is the default gateway.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Retrieve IPs from inactive clients periodically</b> - Whenever a DHCP client requests an IP address from the LAN DHCP server, the server will give out an IP to this client for a certain amount of time (e.g., 1 day). However, even if this client only uses the IP for say 5 minutes, the server still "reserves" 1 day for that client. Because a DHCP server only has a limited number of IPs to lease to its DHCP clients, soon enough all the IPs will be used out and then no one will be able to get any IPs from this server anymore. Therefore, this feature is used to get the IP back from inactive clients (i.e. doesn't use the IP but the server still reserves the IP for him).</p>																
DNS Server IP Address	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p><b>Primary IP Address</b> -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. If your ISP does not provide it, the router will automatically apply default DNS Server IP address: 194.109.6.66 to this field.</p> <p><b>Secondary IP Address</b> - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. If your ISP does not provide it, the router will automatically apply default secondary DNS Server IP address: 194.98.0.1 to this field.</p> <p>The default DNS Server IP address can be found via Online Status:</p> <table><tr><td colspan="2">System Status</td><td colspan="2">System Uptime: 71:4</td></tr><tr><td>LAN Status</td><td colspan="2">Primary DNS: 194.109.6.66</td><td>Secondary DNS: 168.95.1.1</td></tr><tr><td>IP Address</td><td>TX Packets</td><td colspan="2">RX Packets</td></tr><tr><td>192.168.1.1</td><td>347390</td><td colspan="2">214004</td></tr></table> <p>If both the Primary IP and Secondary IP Address fields are left empty, the router will use the DNS server assigned by ISP. If not, the router will assign its own IP address to local users as a DNS proxy server.</p>	System Status		System Uptime: 71:4		LAN Status	Primary DNS: 194.109.6.66		Secondary DNS: 168.95.1.1	IP Address	TX Packets	RX Packets		192.168.1.1	347390	214004	
System Status		System Uptime: 71:4															
LAN Status	Primary DNS: 194.109.6.66		Secondary DNS: 168.95.1.1														
IP Address	TX Packets	RX Packets															
192.168.1.1	347390	214004

Index	Matched MAC Address	given IP Address		

Available settings are explained as follows:

Item	Description
Network Configuration	<p><b>Enable/Disable</b> - Click <b>Enable</b> to enable such configuration; click <b>Disable</b> to disable such configuration.</p> <p><b>IP Address</b> - Type in private IP address for connecting to a local private network (Default: 192.168.1.1).</p> <p><b>Subnet Mask</b> - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24)</p> <p><b>RIP Protocol Control</b> –</p> <p><b>Disable</b> - deactivate the RIP protocol. It will lead to a stoppage of the exchange of routing information between routers. (Default)</p> <p><b>Enable</b> – activate the RIP protocol.</p>

<b>DHCP Server Configuration</b>	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Use LAN Port</b> – Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2.</p> <p><b>Use MAC Address</b> - Check such box to specify MAC address.</p> <p><b>MAC Address:</b> Enter the MAC Address of the host one by one and click <b>Add</b> to create a list of hosts to be assigned, deleted or edited IP address from above pool. Set a list of MAC Address for 2<sup>nd</sup> DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2<sup>nd</sup> subnet won't get an IP address belonging to 1<sup>st</sup> subnet.</p> <p><b>Add</b> – Type the MAC address in the boxes and click this button to add.</p> <p><b>Delete</b> – Click it to delete the selected MAC address.</p> <p><b>Edit</b> – Click it to edit the selected MAC address.</p> <p><b>Cancel</b> – Click it to cancel the job of adding, deleting and editing.</p>
----------------------------------	--

When you finish the configuration, please click **OK** to save and exit this page.

### 3.2.3 Static Route

Go to **LAN** to open setting page and choose **Static Route**. The router offers IPv4 and IPv6 for you to configure the static route. Both protocols bring different web pages.

#### Static Route for IPv4

LAN >> Static Route Setup

IPv4			IPv6			<a href="#">Set to Factory Default</a>   <a href="#">View Routing Table</a>	
Index	Destination Address	Status	Index	Destination Address	Status		
<a href="#">1.</a>	???	?	<a href="#">6.</a>	???	?		
<a href="#">2.</a>	???	?	<a href="#">7.</a>	???	?		
<a href="#">3.</a>	???	?	<a href="#">8.</a>	???	?		
<a href="#">4.</a>	???	?	<a href="#">9.</a>	???	?		
<a href="#">5.</a>	???	?	<a href="#">10.</a>	???	?		

Status: v --- Active, x --- Inactive, ? --- Empty

Available settings are explained as follows:

Item	Description
Index	The number (1 to 10) under Index allows you to open next page to set up static route.
Destination Address	Displays the destination address of the static route.
Status	Displays the status of the static route.
Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing Routing Table	Displays the routing table for your reference. <div><div>Diagnostics &gt;&gt; View Routing Table</div><div><div>Current Running Routing Table</div><div><div>Refresh</div><div>Key: C - connected, S - static, R - RIP, * - default, - - private</div><div>* 0.0.0.0/ 0.0.0.0 via 172.16.3.1, WAN1</div><div>C- 192.168.1.0/ 255.255.255.0 is directly connected, LAN</div><div>C 172.16.3.0/ 255.255.255.0 is directly connected, WAN1</div></div></div></div>

## Static Route for IPv6

You can set up to 40 profiles for IPv6 static route.

### LAN >> Static Route Setup

IPv4			IPv6			<a href="#">Set to Factory Default</a>   <a href="#">View IPv6 Routing Table</a>	
Index	Destination Address	Status	Index	Destination Address	Status		
<a href="#">1.</a>	::/0	x	<a href="#">11.</a>	::/0	x		
<a href="#">2.</a>	::/0	x	<a href="#">12.</a>	::/0	x		
<a href="#">3.</a>	::/0	x	<a href="#">13.</a>	::/0	x		
<a href="#">4.</a>	::/0	x	<a href="#">14.</a>	::/0	x		
<a href="#">5.</a>	::/0	x	<a href="#">15.</a>	::/0	x		
<a href="#">6.</a>	::/0	x	<a href="#">16.</a>	::/0	x		
<a href="#">7.</a>	::/0	x	<a href="#">17.</a>	::/0	x		
<a href="#">8.</a>	::/0	x	<a href="#">18.</a>	::/0	x		
<a href="#">9.</a>	::/0	x	<a href="#">19.</a>	::/0	x		
<a href="#">10.</a>	::/0	x	<a href="#">20.</a>	::/0	x		

<< [1 - 20](#) | [21 - 40](#) >>

[Next](#) >>

Status: v --- Active, x --- Inactive, ? --- Empty

Available settings are explained as follows:

Item	Description
Index	The number (1 to 40) under Index allows you to open next page to set up static route.
Destination Address	Displays the destination address of the static route.
Status	Displays the status of the static route.
Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing IPv6 Routing Table	Displays the routing table for your reference.

Click any underline of index number to get the following page.

### LAN >> Static Route Setup

#### Index No. 1

<input type="checkbox"/> Enable	
Destination IPv6 Address / Prefix Len	::85.170.85.16 / 0
Gateway IPv6 Address	
Network Interface	LAN <input type="button" value="v"/>

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click it to enable this profile.
<b>Destination IPv6 Address / Prefix Len</b>	Type the IP address with the prefix length for this entry.
<b>Gateway IPv6 Address</b>	Type the gateway address for this entry.
<b>Network Interface</b>	Use the drop down list to specify an interface for this static route. <div data-bbox="699 566 829 743">  </div>

## Add Static Routes to Private and Public Networks

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the **RIP Protocol Control**. Then click the **OK** button.

**Note:** There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

2. Click the **LAN - Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

LAN >> Static Route Setup

Index No. 1

<input checked="" type="checkbox"/> Enable	
Destination IP Address	192.168.10.0
Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.2
Network Interface	LAN1
<div>OK Cancel Delete</div>	

3. Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3.

LAN >> Static Route Setup

Index No. 2

<input type="checkbox"/> Enable	
Destination IP Address	211.100.88.0
Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.3
Network Interface	LAN1
<div>OK Cancel Delete</div>	

4. Go to **Diagnostics** and choose **Routing Table** to verify current routing table.

Diagnostics >> View Routing Table

Current Running Routing Table

| Refresh |

Key: C - connected, S - static, R - RIP, \* - default, ~ - private

S~	192.168.10.0/	255.255.255.0 via 192.168.1.2,	LAN
C~	192.168.1.0/	255.255.255.0 is directly connected,	LAN
S~	211.100.88.0/	255.255.255.0 via 192.168.1.3,	LAN

### 3.2.4 VLAN

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. You can also manage the in/out rate of each port. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

**LAN >> VLAN Configuration**

#### VLAN Configuration

☒ Enable

	LAN				Wireless LAN				VLAN Tag			
	P1	P2	P3	P4	SSID1	SSID2	SSID3	SSID4	Subnet	Enable	VID	Priority
<b>VLAN0</b>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN1</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN2</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN3</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN4</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN5</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN6</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
<b>VLAN7</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

☐ Permit untagged device in P1 to access router

1. Tag based VLAN only applied for LAN Ports;

2. The checked Wireless LAN SSID will not has VLAN tagging function but regarded as joining VLAN group;

3. The set VLAN ID (VID) must be unique and not duplicate.

**Note:** Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click it to enable VLAN configuration.
<b>LAN</b>	<b>P1 – P4</b> – Check the LAN port(s) to be grouped under the selected VLAN.
<b>Wireless LAN</b>	<b>SSID1 – SSID4</b> – Check the SSID box(es) for the wireless clients to be grouped under the selected VLAN.
<b>Subnet</b>	Choose one of them to make the selected VLAN mapping to the specified subnet only. For example, LAN1 is specified for VLAN0. It means that PCs grouped under VLAN0 can get the IP address(es) that specified by the subnet.

<b>VLAN Tag</b>	<p><b>Enable</b> – Enable the function of VLAN with tag.</p> <p>The router will add specific VLAN number to all packets on the LAN while sending them out.</p> <p>Please type the tag value and specify the priority for the packets sending by LAN.</p> <p><b>Disable</b> – Disable the function of VLAN with tag.</p> <p><b>VID</b> – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p><b>Priority</b> – Type the packet priority number for such VLAN. The range is from 0 to 7.</p>
-----------------	--

**Note:** Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

To add or remove a VLAN, please refer to the following example.

1. If, VLAN 0 is consisted of hosts linked to P1 and P2 and VLAN 1 is consisted of hosts linked to P3 and P4. VLAN0 and VLAN1 are configured with different subnets.

2. After checking the box to enable VLAN function, you will check the table according to the needs as shown below.

## LAN >> VLAN Configuration

### VLAN Configuration

☒ Enable

	LAN				Wireless LAN				Subnet	VLAN Tag		
	P1	P2	P3	P4	SSID1	SSID2	SSID3	SSID4		Enable	VID	Priority
VLAN0	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN1	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 2	<input type="checkbox"/>	0	0
VLAN2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN3	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

VLAN6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0
VLAN7	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	LAN 1	<input type="checkbox"/>	0	0

☐ Permit untagged device in P1 to access router

1. Tag based VLAN only applied for LAN Ports;

2. The checked Wireless LAN SSID will not has VLAN tagging function but regarded as joining VLAN group;

3. The set VLAN ID (VID) must be unique and not duplicate.

OK Clear Cancel

To remove VLAN, uncheck the needed box and click **OK** to save the results.

### 3.2.5 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. When this function is enabled, all the assigned IP and MAC address binding together cannot be changed. If you modified the binding IP or MAC address, it might cause you not access into the Internet.

Click **LAN** and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

**Bind IP to MAC**

☐ Enable ☒ Disable ☐ Strict Bind

**ARP Table** | [Select All](#) | [Sort](#) | [Refresh](#)

IP Address	Mac Address
192.168.1.5	00-50-7F-CD-07-48
192.168.1.10	E0-CB-4E-DA-48-79

**IP Bind List** | [Select All](#) | [Sort](#)

Index	IP Address	Mac Address
-------	------------	-------------

**Add or Update**  
IP Address   
Mac Address   
Comment

☐ Show Comment

**Note:** IP-MAC binding presets DHCP Allocations.  
If you select Strict Bind, unspecified LAN clients cannot access the Internet.

OK

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click this radio button to invoke this function. However, IP/MAC which is not listed in IP Bind List also can connect to Internet.
<b>Disable</b>	Click this radio button to disable this function. All the settings on this page will be invalid.
<b>Strict Bind</b>	Click this radio button to block the connection of the IP/MAC which is not listed in IP Bind List.
<b>ARP Table</b>	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking <b>Add</b> below.
<b>Select All</b>	Click this link to select all the items in the ARP table.
<b>Sort</b>	Reorder the table based on the IP address.

<b>Refresh</b>	Refresh the ARP table listed below to obtain the newest ARP table information.
<b>Add or Update</b>	<p><b>IP Address</b> – Type the IP address that will be used for the specified MAC address.</p> <p><b>Mac Address</b> – Type the MAC address that is used to bind with the assigned IP address.</p> <p><b>Comment</b> – Type a brief description for the entry.</p> <p><b>Show Comment</b> – Check it to display the content of the comment.</p>
<b>IP Bind List</b>	It displays a list for the IP bind to MAC information.
<b>Add</b>	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in <b>Add and Edit</b> to the table of <b>IP Bind List</b> .
<b>Update</b>	It allows you to edit and modify the selected IP address and MAC address that you create before.
<b>Delete</b>	You can remove any item listed in <b>IP Bind List</b> . Simply click and select the one, and click <b>Delete</b> . The selected item will be removed from the <b>IP Bind List</b> .

**Note:** Before you select **Strict Bind**, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web configurator of the router might not be accessed.

### 3.2.6 LAN Port Mirror

LAN port mirror can be applied for the users in LAN. Generally speaking, this function copies traffic from one or more specific ports to a target port. This mechanism helps manager track the network errors or abnormal packets transmission without interrupting the flow of data access the network. By the way, user can apply this function to monitor all traffics which user needs to check.

There are some advantages supported in this feature. First, it is more economical without other detecting equipments to be set up. Second, it may be able to view traffic on one or more ports within a VLAN at the same time. Third, it can transfer all data traffics to be mirrored to one analyzer connect to the mirroring port. Last, it is more convenient and easy to configure in user's interface.

#### LAN >> LAN Port Mirror

##### LAN Port Mirror

Port Mirror:  
☐ Enable ☒ Disable

Mirror port:  
☐ P2 ☐ P3 ☐ P4

Mirrored port:  
☐ P1 ☐ P2 ☐ P3 ☐ P4

**Note :**The selected mirror port will only serve debug purposes and should not be used as a part of the LAN.

OK

Available settings are explained as follows:

Item	Description
<b>Port Mirror</b>	Check <b>Enable</b> to activate this function. Or, check <b>Disable</b> to close this function.
<b>Mirror Port</b>	Select a port to view traffic sent from mirrored ports.
<b>Mirrored port</b>	Select which ports are necessary to be mirrored.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.2.7 Wired 802.1x

IEEE 802.1x is an IEEE Standard for port-based Network Access Control (PNAC). It is part of the IEEE 802.1 group of networking protocols. It provides an authentication mechanism for the device that is attached to a LAN or WLAN.

Wired 802.1x provides authentication for one network device on each LAN port. The RADIUS Server settings must be configured before enabling 802.1x because the EAP (Extensible Authentication Protocol) Authenticator relies on the RADIUS Server in its authentication process. Each LAN port with Wired 802.1x configured will only forward 802.1x packets and block all other packets until the authentication has successfully completed.

#### LAN >> Wired 802.1x

##### Wired 802.1x

LAN 802.1x:  
☒ Enable  
802.1x ports:  
☐ P1
☐ P2
☐ P3
☐ P4

Please note that 802.1x enabled LAN ports will support EAPOL authentication for one network device only. Therefore, 802.1x enabled LAN ports will have issues when connecting to a L2 switch. If you want 802.1x support for multiple network devices, please disable 802.1x here and configure 802.1x on the connecting switch. This feature supports PEAP and EAP-TLS.

OK

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check the box to enable LAN 802.1x function.
<b>802.1x ports</b>	After enabling the function, simply specify the LAN port(s) to apply such function.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.2.8 Web Portal Setup

This page allows you to configure a profile with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router. No matter what the purpose of the wireless/LAN client is, he/she will be forced into the URL configured here while trying to access into the Internet or the desired web page through this router. That is, a company which wants to have an advertisement for its products to users can specify the URL in this page to reach its goal.

#### LAN >> Web Portal Setup

##### Web Portal Table:

Profile	Status	Interface	
<a href="#">1.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">2.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">3.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">4.</a>	Disable	None	<a href="#">Preview</a>

**Note:** Internet access must be enabled while webpage redirection is about to enable.

Each item is explained as follows:

Item	Description
Profile	Display the number link which allows you to configure the profile.
Status	Display the content (Disable, URL Redirect or Message) of the profile.
Interface	Display the applied interfaced of the profile.
Preview	Open a preview window according to the configured settings.

To configure the profile, click any index number link to open the following page.

#### LAN >> Web Portal Setup

##### Profile Index: 1

☒ Disable  
☐ URL Redirect  
  
☐ Message

(Max 255 characters)

Applied Interfaces

☐ LAN1 ☐ LAN2 ☐ LAN3 ☐ LAN4  
☐ SSID1 ☐ SSID2 ☐ SSID3 ☐ SSID4

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Disable</b>	Click this button to close this function.
<b>URL Redirect</b>	Any user who wants to access into Internet through this router will be redirected to the URL specified here first. It is a useful method for the purpose of advertisement. For example, force the wireless user(s) in hotel to access into the web page that the hotel wants the user(s) to visit.
<b>Message</b>	Type words or sentences here. The message will be displayed on the screen for several seconds when the wireless users access into the web page through the router.
<b>Applied Interfaces</b>	Check the box(es) representing different interfaces to be applied by such profile. The advantage is that each SSID (1/2/3/4) for wireless network can be applied with different web portal separately.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.3 Load-Balance /Route Policy

**Load-Balance / Route Policy** (Cisco called it "policy-based routing") is a feature where a set of rules or "policies" are defined first. Then, if there comes a packet that matches any one of the "policies", it will be directed to the specified interface.

#### Load-Balance/Route Policy

#### Load-Balance/Route Policy

[Set to Factory Default](#)

## 3.4 NAT

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Below shows the menu items for NAT.

### 3.4.1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with public IP address from external users to the mapping private IP address/port of the server.

The port redirection can only apply to incoming traffic.

To use this function, please go to **NAT** page and choose **Port Redirection** web page. The **Port Redirection Table** provides 20 port-mapping entries for the internal hosts.

**NAT >> Port Redirection**

Port Redirection						<a href="#">Set to Factory Default</a>
Index	Service Name	WAN Interface	Protocol	Public Port	Private IP	Status
<a href="#">1.</a>		All				x
<a href="#">2.</a>		All				x
<a href="#">3.</a>		All				x
<a href="#">4.</a>		All				x
<a href="#">5.</a>		All				x
<a href="#">6.</a>		All				x
<a href="#">7.</a>		All				x
<a href="#">8.</a>		All				x
<a href="#">9.</a>		All				x
<a href="#">10.</a>		All				x

[Next >>](#)

**Note:** The configured ports in the **Management** and **SSL VPN** webUIs will be used by the router and not be sent to the local computer defined here.

Each item is explained as follows:

Item	Description
<b>Index</b>	Display the number of the profile.
<b>Service Name</b>	Display the description of the specific network service.
<b>WAN Interface</b>	Display the WAN IP address used by the profile.
<b>Protocol</b>	Display the transport layer protocol (TCP or UDP).
<b>Public Port</b>	Display the port number which will be redirected to the specified <b>Private IP and Port</b> of the internal host.
<b>Private IP</b>	Display the IP address of the internal host providing the service.
<b>Status</b>	Display if the profile is enabled (v) or not (x).

Press any number under Index to access into next page for configuring port redirection.

#### NAT >> Port Redirection

##### Index No. 1

☒ Enable

Mode	Range
Service Name	Single
Protocol	---
WAN IP	1.All
Public Port	0 -
Private IP	-
Private Port	0

**Note:** In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable such port redirection setting.
<b>Mode</b>	Two options (Single and Range) are provided here for you to choose. To set a range for the specific service, select <b>Range</b> . In Range mode, if the public port (start port and end port) and the starting IP of private IP had been entered, the system will calculate and display the ending IP of private IP automatically.
<b>Service Name</b>	Enter the description of the specific network service.
<b>Protocol</b>	Select the transport layer protocol (TCP or UDP).
<b>WAN IP</b>	Select the WAN IP used for port redirection. There are eight WAN IP alias that can be selected and used for port redirection. The default setting is <b>All</b> which means all the incoming data from any port will be redirected to specified range of IP address and port.

<b>Public Port</b>	Specify which port can be redirected to the specified <b>Private IP and Port</b> of the internal host. If you choose <b>Range</b> as the port redirection mode, you will see two boxes on this field. Simply type the required number on the first box. The second one will be assigned automatically later.
<b>Private IP</b>	Specify the private IP address of the internal host providing the service. If you choose <b>Range</b> as the port redirection mode, you will see two boxes on this field. Type a complete IP address in the first box (as the starting point) and the fourth digits in the second box (as the end point).
<b>Private Port</b>	Specify the private port number of the service offered by the internal host.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web configurator in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

#### System Maintenance >> Management

### 3.4.2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a

single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click **DMZ Host** to open the following page:

NAT >> DMZ Host Setup

DMZ Host Setup

WAN1

WAN2

WAN3

WAN 1

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check to enable the DMZ Host function.
<b>Private IP</b>	Enter the private IP address of the DMZ host, or click Choose PC to select one.
<b>Choose PC</b>	<p>Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.</p>  <p>When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click <b>OK</b> to save the setting.</p> 

After finishing all the settings here, please click **OK** to save the configuration.

### 3.4.3 Open Ports

**Open Ports** allows you to open a range of ports for the traffic of special applications.

Common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule and others), Internet Camera etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

Click **Open Ports** to open the following page:

**NAT >> Open Ports**

Open Ports Setup				<a href="#">Set to Factory Default</a>
Index	Comment	WAN Interface	Local IP Address	Status
<a href="#">1.</a>				X
<a href="#">2.</a>				X
<a href="#">3.</a>				X
<a href="#">4.</a>				X
<a href="#">5.</a>				X
<a href="#">6.</a>				X
<a href="#">7.</a>				X
<a href="#">8.</a>				X
<a href="#">9.</a>				X
<a href="#">10.</a>				X

<< [1-10](#) | [11-20](#) >> [Next](#) >>

**Note:** The configured ports in the [Management](#) and [SSL VPN](#) webUIs will be used by the router and not be sent to the local computer defined here.

Available settings are explained as follows:

Item	Description
<b>Index</b>	Indicate the relative number for the particular entry that you want to offer service in a local host. You should click the appropriate index number to edit or clear the corresponding entry.
<b>Comment</b>	Specify the name for the defined network service.
<b>WAN Interface</b>	Display the WAN interface used by such index.
<b>Aux. WAN IP</b>	Display the IP alias setting used by such index. If no IP alias setting exists, such field will not appear.
<b>Local IP Address</b>	Display the private IP address of the local host offering the service.
<b>Status</b>	Display the state for the corresponding entry. X or V is to represent the <b>Inactive</b> or <b>Active</b> state.

To add or edit port settings, click one index number on the page. The index entry setup page will pop up. In each index entry, you can specify **10** port ranges for diverse services.

2.	<input type="text" value="UDP"/>	<input type="text" value="4500"/>	<input type="text" value="4700"/>	7.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
3.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	8.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
4.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	9.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>
5.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	10.	<input type="text" value="-----"/>	<input type="text" value="0"/>	<input type="text" value="0"/>

Available settings are explained as follows:

Item	Description
<b>Enable Open Ports</b>	Check to enable this entry.
<b>Comment</b>	Make a name for the defined network application/service.
<b>WAN Interface</b>	Specify the WAN interface that will be used for this entry.
<b>WAN IP</b>	Specify the WAN IP address that will be used for this entry. This setting is available when WAN IP Alias is configured.
<b>Local Computer</b>	Enter the private IP address of the local host or click <b>Choose PC</b> to select one. <b>Choose PC</b> - Click this button and, subsequently, a window having a list of private IP addresses of local hosts will automatically pop up. Select the appropriate IP address of the local host in the list.
<b>Protocol</b>	Specify the transport layer protocol. It could be <b>TCP</b> , <b>UDP</b> , or <b>-----</b> (none) for selection.
<b>Start Port</b>	Specify the starting port number of the service offered by the local host.
<b>End Port</b>	Specify the ending port number of the service offered by the local host.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.4.4 Port Triggering

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

NAT >> Port Triggering

Port Triggering						<a href="#">Set to Factory Default</a>
Index	Comment	Triggering Protocol	Triggering Port	Incoming Protocol	Incoming Port	Status
<a href="#">1.</a>						X
<a href="#">2.</a>						X
<a href="#">3.</a>						X
<a href="#">4.</a>						X
<a href="#">5.</a>						X
<a href="#">6.</a>						X
<a href="#">7.</a>						X
<a href="#">8.</a>						X
<a href="#">9.</a>						X

Service	User Defined ▼
Comment	<input type="text"/>
Triggering Protocol	--- ▼
Triggering Port	<input type="text"/>
Incoming Protocol	--- ▼
Incoming Port	<input type="text"/>
<p><b>Note:</b> The Triggering Port and Incoming Port should be input like this : 123-456,777-789 (legal), 123-456,789 (legal), but 123-456-789 (illegal).</p>	
<div>OK Clear Cancel</div>	

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check to enable this entry.
<b>Service</b>	<p>Choose the <b>predefined</b> service to apply for such trigger profile.</p> 
<b>Comment</b>	Type the text to memorize the application of this rule.
<b>Triggering Protocol</b>	<p>Select the protocol (TCP, UDP or TCP/UDP) for such triggering profile.</p> 
<b>Triggering Port</b>	Type the port or port range for such trigger profile.
<b>Incoming Protocol</b>	When the triggering packets received, it is expected the incoming packets will use the selected protocol. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.

	<div> <div>---</div> <div>---</div> <div>TCP</div> <div>UDP</div> <div>TCP/UDP</div> </div>
<b>Incoming Port</b>	Type the port or port range for the incoming packets.

After finishing all the settings here, please click **OK** to save the configuration.

## 3.5 Firewall

### 3.5.1 Basics for Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet. Furthermore, it can filter out specific packets that trigger the router to build an unwanted outgoing connection.

#### Firewall Facilities

The users on the LAN are provided with secured protection by the following firewall facilities:

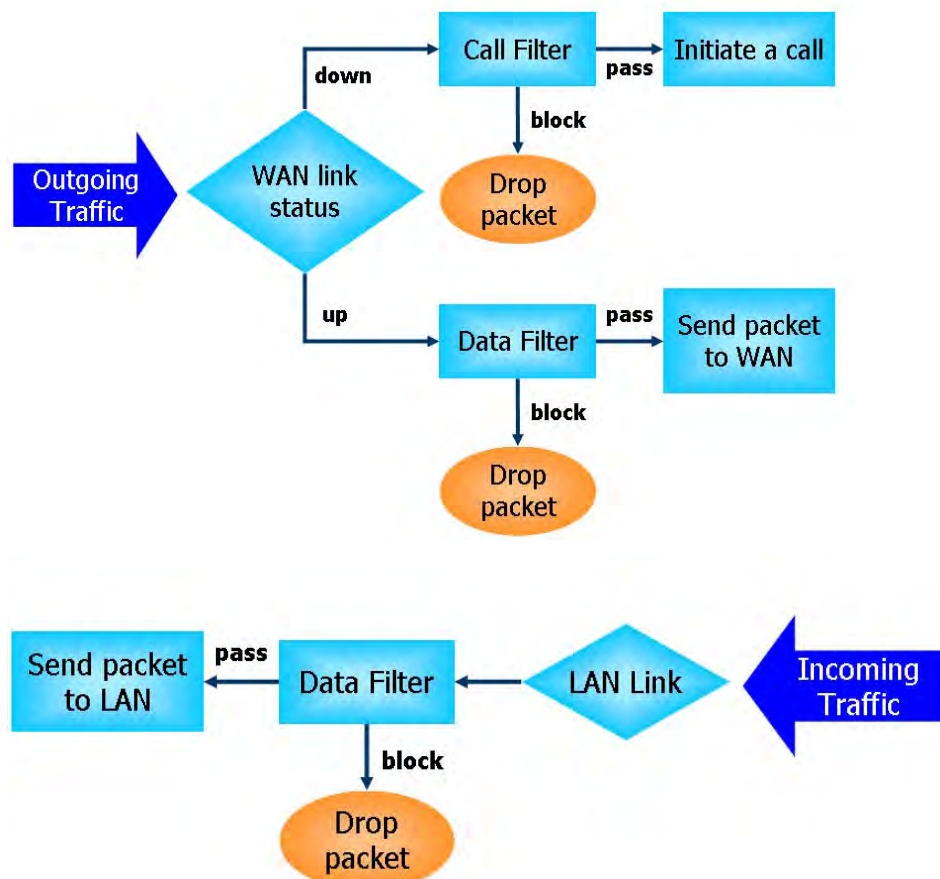

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

#### IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: **Call Filter** and **Data Filter**.

- **Call Filter** - When there is no existing Internet connection, **Call Filter** is applied to all traffic, all of which should be outgoing. It will check packets according to the filter rules. If legal, the packet will pass. Then the router shall “**initiate a call**” to build the Internet connection and send the packet to Internet.
- **Data Filter** - When there is an existing Internet connection, **Data Filter** is applied to incoming and outgoing traffic. It will check packets according to the filter rules. If legal, the packet will pass the router.

The following illustrations are flow charts explaining how router will treat incoming traffic and outgoing traffic respectively.

## Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not just examine the header information also monitor the state of the connection.

## Denial of Service (DoS) Defense

The **DoS Defense** functionality helps you to detect and mitigate the DoS attack. The attacks are usually categorized into two types, the flooding-type attacks and the vulnerability attacks. The flooding-type attacks will attempt to exhaust all your system's resource while the vulnerability attacks will try to paralyze the system by offending the vulnerabilities of the protocol or operation system.

The **DoS Defense** function enables the Vigor router to inspect every incoming packet based on the attack signature database. Any malicious packet that might duplicate itself to paralyze the host in the secure LAN will be strictly blocked and a Syslog message will be sent as warning, if you set up Syslog server.

Also the Vigor router monitors the traffic. Any abnormal traffic flow violating the pre-defined parameter, such as the number of thresholds, is identified as an attack and the Vigor router will activate its defense mechanism to mitigate in a real-time manner.

The below shows the attack types that DoS/DDoS defense function can detect:

1. SYN flood attack
9. SYN fragment

2. UDP flood attack
3. ICMP flood attack
4. Port Scan attack
5. IP options
6. Land attack
7. Smurf attack
8. Trace route
10. Fraggle attack
11. TCP flag scan
12. Tear drop attack
13. Ping of Death attack
14. ICMP fragment
15. Unassigned Numbers

Below shows the menu items for Firewall.

### 3.5.2 General Setup

General Setup allows you to adjust settings of IP Filter and common options. Here you can enable or disable the **Call Filter** or **Data Filter**. Under some circumstance, your filter set can be linked to work in a serial manner. So here you assign the **Start Filter Set** only. Also you can configure the **Log Flag** settings, **Apply IP filter to VPN incoming packets**, and **Accept incoming fragmented UDP packets**.

Click **Firewall** and click **General Setup** to open the general setup page.

#### General Setup Page

Such page allows you to enable / disable Call Filter and Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

General Setup

General Setup

Default Rule

Call Filter

☒ Enable
 ☐ Disable

Start Filter Set

Set#1

Data Filter

☒ Enable
 ☐ Disable

Start Filter Set

Set#2

☒ Accept large incoming fragmented UDP or ICMP packets ( for some games, ex. CS )
 ☒ Enable Strict Security Firewall

OK

Cancel

Available settings are explained as follows:

Item	Description
Call Filter	Check <b>Enable</b> to activate the Call Filter function. Assign a start filter set for the Call Filter.

<b>Data Filter</b>	Check <b>Enable</b> to activate the Data Filter function. Assign a start filter set for the Data Filter.
<b>Accept large incoming...</b>	Some on-line games (for example: Half Life) will use lots of fragmented UDP packets to transfer game data. Instinctively as a secure firewall, Vigor router will reject these fragmented packets to prevent attack unless you enable “ <b>Accept large incoming fragmented UDP or ICMP Packets</b> ”. By checking this box, you can play these kinds of on-line games. If security concern is in higher priority, you cannot enable “ <b>Accept large incoming fragmented UDP or ICMP Packets</b> ”.
<b>Enable Strict Security Firewall</b>	Check the box to enable such function. All the packets, while transmitting through Vigor router, will be filtered by firewall settings configured by Vigor router if such feature is enabled. If the firewall system does not have any response (pass or block) for these packets, such as no response coming from web content filter, then the router’s firewall will block the packets directly.

## Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter, AI/AV, AS, for data transmission via Vigor router.

[Firewall >> General Setup](#)

### General Setup

General Setup

Default Rule

**Actions for default rule:**

Application	Action/Profile	Syslog
<b>Filter</b>	Pass	<input type="checkbox"/>
<b>Sessions Control</b>	67 / 60000	<input type="checkbox"/>
<b>Quality of Service</b>	None	<input type="checkbox"/>
<b>Load-Balance policy</b>	Auto-Select	<input type="checkbox"/>
<b>User Management</b>	None	<input type="checkbox"/>
<b>APP Enforcement</b>	None	<input type="checkbox"/>
<b>URL Content Filter</b>	None	<input type="checkbox"/>
<b>Web Content Filter</b>	None	<input type="checkbox"/>

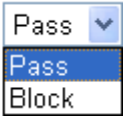

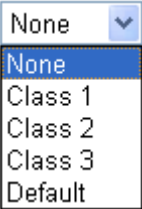

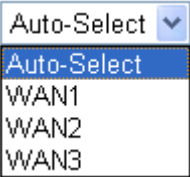

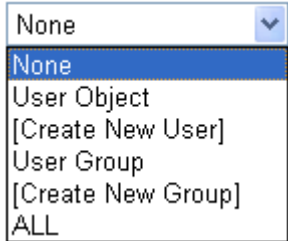

Advance Setting

Edit

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Filter</b>	<p>Select <b>Pass</b> or <b>Block</b> for the packets that do not match with the filter rules.</p> <p>Filter </p>
<b>Sessions Control</b>	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
<b>Quality of Service</b>	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p> <p></p>
<b>Load-Balance Policy</b>	<p>Choose the WAN interface for applying Load-Balance Policy.</p> <p></p>
<b>User Management</b>	<p>Such item is available only when <b>Rule-Based</b> is selected in User <b>Management&gt;&gt;General Setup</b>. The general firewall rule will be applied to the user/user group/all users specified here.</p> <p></p> <p><b>Note:</b> When there is no user profile or group profile existed, <b>Create New User</b> or <b>Create New Group</b> item will appear for you to click to create a new one.</p>

<b>APP Enforcement</b>	Select an <b>APP Enforcement</b> profile for global IM/P2P application blocking. If there is no profile for you to select, please choose <b>[Create New]</b> from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the <b>APP Enforcement</b> profile selected here. For detailed information, refer to the section of <b>APP Enforcement</b> profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>URL Content Filter</b>	Select one of the <b>URL Content Filter</b> profile settings (created in <b>CSM&gt;&gt; URL Content Filter</b> ) for applying with this router. Please set at least one profile for choosing in <b>CSM&gt;&gt; URL Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>URL Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>Web Content Filter</b>	Select one of the <b>Web Content Filter</b> profile settings (created in <b>CSM&gt;&gt; Web Content Filter</b> ) for applying with this router. Please set at least one profile for anti-virus in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>Web Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.

## Advance Setting

Click **Edit** to open the following window. However, it is **strongly recommended** to use the default settings here.

### Firewall >> General Setup

Advance Setting

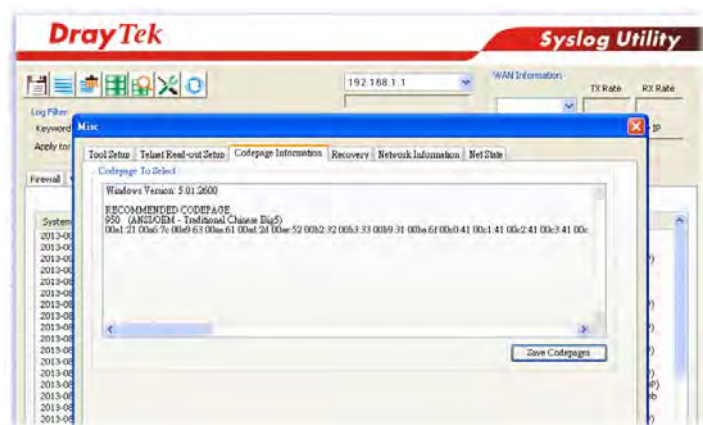

Codepage	ANSI(1252)-Latin I	
Window size:	65535	
Session timeout:	1440	Minute

OK

Close

**Codepage** - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.

If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.

**Window size** – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

**Session timeout** – Setting timeout for sessions can make the best utilization of network resources.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.5.3 Filter Setup

Click **Firewall** and click **Filter Setup** to open the setup page.

Firewall >> Filter Setup

Filter Setup		<a href="#">Set to Factory Default</a>	
Set	Comments	Set	Comments
<a href="#">1.</a>	Default Call Filter	<a href="#">7.</a>	
<a href="#">2.</a>	Default Data Filter	<a href="#">8.</a>	
<a href="#">3.</a>		<a href="#">9.</a>	
<a href="#">4.</a>		<a href="#">10.</a>	
<a href="#">5.</a>		<a href="#">11.</a>	
<a href="#">6.</a>		<a href="#">12.</a>	

To edit or add a filter, click on the set number to edit the individual set. The following page will be shown. Each filter set contains up to 7 rules. Click on the rule number button to edit each rule. Check **Active** to enable the rule.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments :

Filter Rule	Active	Comments	Move Up	Move Down

Advance Setting

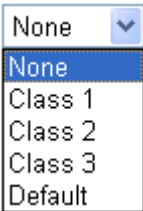

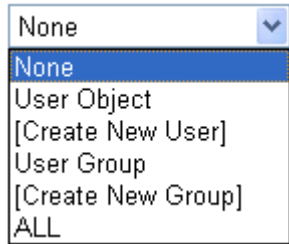

Available settings are explained as follows:

Item	Description
<b>Check to enable the Filter Rule</b>	Check this box to enable the filter rule.
<b>Comments</b>	Enter filter set comments/description. Maximum length is 14- character long.
<b>Index(1-15)</b>	Set PCs on LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in <b>Applications &gt;&gt; Schedule</b> setup. The default setting of this field is blank and the function will always work.
<b>Clear sessions when schedule ON</b>	Check this box to clear the sessions when the above schedule profiles are applied.

<b>Direction</b>	<p>Set the direction of packet flow. It is for <b>Data Filter</b> only. For the <b>Call Filter</b>, this setting is not available since <b>Call Filter</b> is only applied to outgoing traffic.</p>  <p><b>Note:</b> RT means routing domain for 2nd subnet or other LAN.</p>
<b>Source/Destination IP</b>	<p>Click <b>Edit</b> to access into the following dialog to choose the source/destination IP or IP ranges.</p>  <p>To set the IP address manually, please choose <b>Any Address/Single Address/Range Address/Subnet Address</b> as the Address Type and type them in this dialog. In addition, if you want to use the IP range from defined groups or objects, please choose <b>Group and Objects</b> as the Address Type.</p>  <p>From the <b>IP Group</b> drop down list, choose the one that you want to apply. Or use the <b>IP Object</b> drop down list to choose the object that you want.</p>

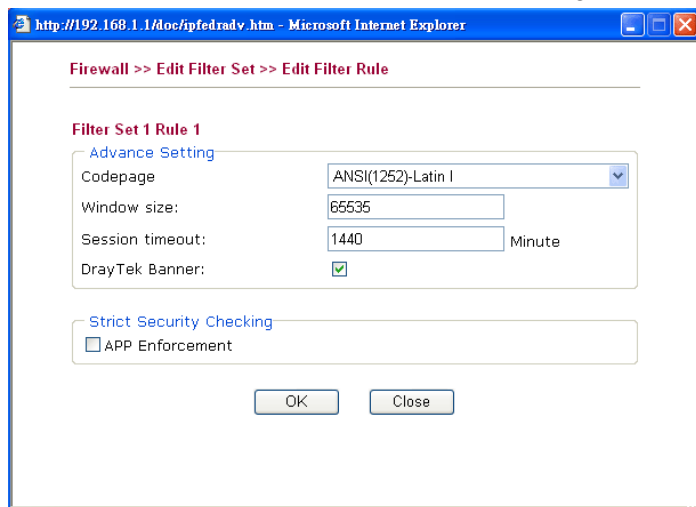

<p><b>Service Type</b></p>	<p>Click <b>Edit</b> to access into the following dialog to choose a suitable service type.</p>  <p>To set the service type manually, please choose <b>User defined</b> as the Service Type and type them in this dialog. In addition, if you want to use the service type from defined groups or objects, please choose <b>Group and Objects</b> as the Service Type.</p>  <p><b>Protocol</b> - Specify the protocol(s) which this filter rule will apply to.</p> <p><b>Source/Destination Port</b> –</p> <p>(=) – when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) – when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(&gt;) – the port number greater than this value is available.</p> <p>(&lt;) – the port number less than this value is available for this profile.</p> <p><b>Service Group/Object</b> - Use the drop down list to choose the one that you want.</p>
<p><b>Fragments</b></p>	<p>Specify the action for fragmented packets. And it is used for <b>Data Filter</b> only.</p> <p><b>Don't care</b> -No action will be taken towards fragmented packets.</p> <p><b>Unfragmented</b> -Apply the rule to unfragmented packets.</p> <p><b>Fragmented</b> - Apply the rule to fragmented packets.</p> <p><b>Too Short</b> - Apply the rule only to packets that are too short to contain a complete header.</p>

<b>Filter</b>	<p>Specifies the action to be taken when packets match the rule.</p> <p><b>Block Immediately</b> - Packets matching the rule will be dropped immediately.</p> <p><b>Pass Immediately</b> - Packets matching the rule will be passed immediately.</p> <p><b>Block If No Further Match</b> - A packet matching the rule, and that does not match further rules, will be dropped.</p> <p><b>Pass If No Further Match</b> - A packet matching the rule, and that does not match further rules, will be passed through.</p>
<b>Branch to other Filter Set</b>	<p>If the packet matches the filter rule, the next filter rule will branch to the specified filter set. Select next filter rule to branch from the drop-down menu. Be aware that the router will apply the specified filter rule for ever and will not return to previous filter rule any more.</p>
<b>Sessions Control</b>	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
<b>MAC Bind IP</b>	<p><b>Strict</b> - Make the MAC address and IP address settings configured in <b>IP Object</b> for <b>Source IP</b> and <b>Destination IP</b> be bound for applying such filter rule.</p> <p><b>No-Strict</b> - no limitation.</p>
<b>Quality of Service</b>	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p> 
<b>Load-Balance policy</b>	<p>Choose the WAN interface for applying Load-Balance Policy.</p>
<b>User Management</b>	<p>Such item is available only when <b>Rule-Based</b> is selected in User <b>Management&gt;&gt;General Setup</b>. The general firewall rule will be applied to the user/user group/all users specified here.</p>  <p><b>Note:</b> When there is no user profile or group profile existed, <b>Create New User</b> or <b>Create New Group</b> item will appear for you to click to create a new one.</p>

<b>APP Enforcement</b>	Select an <b>APP Enforcement</b> profile for global IM/P2P application blocking. If there is no profile for you to select, please choose <b>[Create New]</b> from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the <b>APP Enforcement</b> profile selected here. For detailed information, refer to the section of <b>APP Enforcement</b> profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>URL Content Filter</b>	Select one of the <b>URL Content Filter</b> profile settings (created in <b>CSM&gt;&gt; URL Content Filter</b> ) for applying with this router. Please set at least one profile for choosing in <b>CSM&gt;&gt; URL Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>URL Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>Web Content Filter</b>	Select one of the <b>Web Content Filter</b> profile settings (created in <b>CSM&gt;&gt; Web Content Filter</b> ) for applying with this router. Please set at least one profile for anti-virus in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>Web Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>URL Content Filter</b>	Select one of the <b>URL Content Filter</b> profile settings (created in <b>CSM&gt;&gt; URL Content Filter</b> ) for applying with this router. Please set at least one profile for choosing in <b>CSM&gt;&gt; URL Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>URL Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.
<b>Web Content Filter</b>	Select one of the <b>Web Content Filter</b> profile settings (created in <b>CSM&gt;&gt; Web Content Filter</b> ) for applying with this router. Please set at least one profile for anti-virus in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>Web Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.

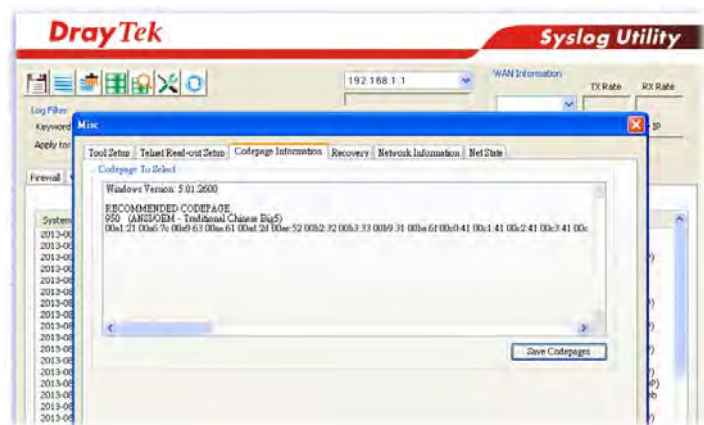

## Advance Setting

Click **Edit** to open the following window. However, it is **strongly recommended** to use the default settings here.

**Codepage** - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.

If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.

**Window size** – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

**Session timeout**–Setting timeout for sessions can make the best utilization of network resources. However, Queue timeout is configured for TCP protocol only; session timeout is configured for the data flow which matched with the firewall rule.

**DrayTek Banner** – Please uncheck this box and the following screen will not be shown for the unreachable web page. The default setting is Enabled.

## Example

As stated before, all the traffic will be separated and arbitrated using one of two IP filters: call filter or data filter. You may preset 12 call filters and data filters in **Filter Setup** and even link them in a serial manner. Each filter set is composed by 7 filter rules, which can be further defined. After that, in **General Setup** you may specify one set for call filter and one set for data filter to execute first.

The image displays four screenshots of the DrayTek Vigor2850 configuration interface, illustrating the setup of firewall filters. Red arrows indicate the flow of configuration steps.

**Firewall >> General Setup**

The **General Setup** window shows the **General Setup** tab. The **Call Filter** and **Data Filter** sections have **Enable** selected. The **Start Filter Set** dropdown for both is set to **Set#1**. The **Accept large incoming fragmented UDP or ICMP packets ( for some games, ex. CS )** checkbox is checked. The **Enable Strict Security Firewall** checkbox is also checked. The **OK** and **Cancel** buttons are at the bottom.

**Firewall >> Filter Setup**

The **Filter Setup** window shows a table of filter sets. The **Set** column lists 12 sets, with **Set#1** and **Set#2** highlighted. The **Comments** column shows **Default Call Filter** and **Default Data Filter**. The **Set to Factory Default** button is at the top right.

**Firewall >> Filter Setup >> Edit Filter Set**

The **Edit Filter Set** window shows a table of filter rules for **Filter Set 1**. The **Filter Rule** column lists 7 rules, with **Rule 1** highlighted. The **Active** column shows **Block NetBios**. The **Move Up** and **Move Down** buttons are at the bottom right.

**Firewall >> Edit Filter Set >> Edit Filter Rule**

The **Edit Filter Rule** window shows the configuration for **Filter Set 1 Rule 1**. The **Check to enable the Filter Rule** checkbox is checked. The **Comments** field is **Block NetBios**. The **Index(1-15) in Schedule Setup** field is empty. The **Direction** is **LAN/RT/VPN -> WAN**. The **Source IP** is **Any**. The **Destination IP** is **Any**. The **Service Type** is **TCP/UDP, Port: from 137-139 to undefined**. The **Fragments** are **Don't Care**. The **Action Profile** is **Pass if No Further Match**. The **Syslog** checkbox is checked. The **Advance Setting** button is at the bottom right.

### 3.5.4 DoS Defense

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the **DoS Defense** setup. The DoS Defense functionality is disabled for default.

Click **Firewall** and click **DoS Defense** to open the setup page.

**Firewall >> DoS defense Setup**

**DoS defense Setup**

☐ Enable DoS Defense

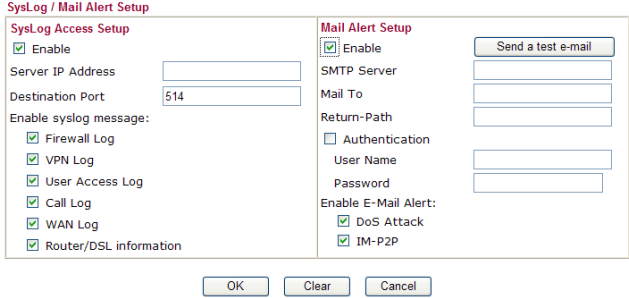

<input type="checkbox"/> Enable SYN flood defense	Threshold	<input type="text" value="2000"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable UDP flood defense	Threshold	<input type="text" value="2000"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable ICMP flood defense	Threshold	<input type="text" value="250"/>	packets / sec
	Timeout	<input type="text" value="10"/>	sec
<input type="checkbox"/> Enable Port Scan detection	Threshold	<input type="text" value="2000"/>	packets / sec
<input type="checkbox"/> Block IP options	<input type="checkbox"/> Block TCP flag scan		
<input type="checkbox"/> Block Land	<input type="checkbox"/> Block Tear Drop		
<input type="checkbox"/> Block Smurf	<input type="checkbox"/> Block Ping of Death		
<input type="checkbox"/> Block trace route	<input type="checkbox"/> Block ICMP fragment		
<input type="checkbox"/> Block SYN fragment	<input type="checkbox"/> Block Unassigned Numbers		
<input type="checkbox"/> Block Fraggle Attack			

Available settings are explained as follows:

Item	Description
<b>Enable Dos Defense</b>	Check the box to activate the DoS Defense Functionality.
<b>Select All</b>	Click this button to select all the items listed below.
<b>Enable SYN flood defense</b>	<p>Check the box to activate the SYN flood defense function. Once detecting the Threshold of the TCP SYN packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent TCP SYN packets for a period defined in Timeout. The goal for this is prevent the TCP SYN packets' attempt to exhaust the limited-resource of Vigor router.</p> <p>By default, the threshold and timeout values are set to 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p>
<b>Enable UDP flood defense</b>	Check the box to activate the UDP flood defense function. Once detecting the Threshold of the UDP packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent UDP packets for a period defined in Timeout.

	<p>The default setting for threshold and timeout are 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
<b>Enable ICMP flood defense</b>	<p>Check the box to activate the ICMP flood defense function. Similar to the UDP flood defense function, once if the Threshold of ICMP packets from Internet has exceeded the defined value, the router will discard the ICMP echo requests coming from the Internet.</p> <p>The default setting for threshold and timeout are 250 packets per second and 10 seconds, respectively. That means, when 250 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
<b>Enable PortScan detection</b>	<p>Port Scan attacks the Vigor router by sending lots of packets to many ports in an attempt to find ignorant services would respond. Check the box to activate the Port Scan detection. Whenever detecting this malicious exploration behavior by monitoring the port-scanning Threshold rate, the Vigor router will send out a warning.</p> <p>By default, the Vigor router sets the threshold as 2000 packets per second. That means, when 2000 packets per second received, they will be regarded as “attack event”.</p>
<b>Block IP options</b>	<p>Check the box to activate the Block IP options function. The Vigor router will ignore any IP packets with IP option field in the datagram header. The reason for limitation is IP option appears to be a vulnerability of the security for the LAN because it will carry significant information, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages...etc. An eavesdropper outside might learn the details of your private networks.</p>
<b>Block Land</b>	<p>Check the box to enforce the Vigor router to defense the Land attacks. The Land attack combines the SYN attack technology with IP spoofing. A Land attack occurs when an attacker sends spoofed SYN packets with the identical source and destination addresses, as well as the port number to victims.</p>
<b>Block Smurf</b>	<p>Check the box to activate the Block Smurf function. The Vigor router will ignore any broadcasting ICMP echo request.</p>
<b>Block trace router</b>	<p>Check the box to enforce the Vigor router not to forward any trace route packets.</p>
<b>Block SYN fragment</b>	<p>Check the box to activate the Block SYN fragment function. The Vigor router will drop any packets having SYN flag and more fragment bit set.</p>
<b>Block Fraggle Attack</b>	<p>Check the box to activate the Block fraggle Attack function. Any broadcast UDP packets received from the Internet is blocked.</p> <p>Activating the DoS/DDoS defense functionality might</p>

	block some legal packets. For example, when you activate the fraggle attack defense, all broadcast UDP packets coming from the Internet are blocked. Therefore, the RIP packets from the Internet might be dropped.
<b>Block TCP flag scan</b>	Check the box to activate the Block TCP flag scan function. Any TCP packet with anomaly flag setting is dropped. Those scanning activities include <i>no flag scan</i> , <i>FIN without ACK scan</i> , <i>SYN FINscan</i> , <i>Xmas scan</i> and <i>full Xmas scan</i> .
<b>Block Tear Drop</b>	Check the box to activate the Block Tear Drop function. Many machines may crash when receiving ICMP datagrams (packets) that exceed the maximum length. To avoid this type of attack, the Vigor router is designed to be capable of discarding any fragmented ICMP packets with a length greater than 1024 octets.
<b>Block Ping of Death</b>	Check the box to activate the Block Ping of Death function. This attack involves the perpetrator sending overlapping packets to the target hosts so that those target hosts will hang once they re-construct the packets. The Vigor routers will block any packets realizing this attacking activity.
<b>Block ICMP Fragment</b>	Check the box to activate the Block ICMP fragment function. Any ICMP packets with more fragment bit set are dropped.
<b>Block Unassigned Numbers</b>	Check the box to activate the Block Unknown Protocol function. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.
<b>Warning Messages</b>	<p>We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.</p> <p>All the warning messages related to <b>DoS Defense</b> will be sent to user and user can review it through Syslog daemon. Look for the keyword <b>DoS</b> in the message, followed by a name to indicate what kind of attacks is detected.</p> <p>System Maintenance &gt;&gt; SysLog / Mail Alert Setup</p> 

## 3.6 User Management

User Management is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password. Instead of managing with IP address/MAC address, User Management function manages hosts with user account. Network administrator can give different firewall policies or rules for different hosts with different User Management accounts. This is more flexible and convenient for network management. Not only offering the basic checking for Internet access, User Management also provides additional firewall rules, e.g. CSM checking for protecting hosts.

**Note:** Filter rules configured under Firewall usually are applied to the host (the one that the router installed) only. With user management, the rules can be applied to every user connected to the router with customized profiles.

**Note:** If **Transparency Mode** is selected in **Firewall>>General Setup**, User Management cannot be used any more. Please uncheck Transparency Mode first if you want to utilize user management to handle users in LAN, WAN or WLAN.

Firewall  
**User Management**  
▶ General Setup  
▶ User Profile  
▶ User Group  
▶ User Online Status  
Objects Setting

### 3.6.1 General Setup

General Setup can determine the standard (rule-based or user-based) for the users controlled by User Management. The mode (standard) selected here will influence the contents of the filter rule(s) applied to every user.

**User Management >> General Setup**

**General Setup**

Mode:

Web Authentication:

**Notice :**

1. User Management will refer to active rules in Data Filter as whitelists and blacklists in user-based firewall mode.
2. Users match the above lists will not be required for authentication.  
The firewall rules policy will still valid.
3. Otherwise, authentication required for users not matched the above lists.  
The firewall rules designated in the user profile's policy will still valid.

**Landing Page** (Max 255 characters) [Preview](#) | [Set to Factory Default](#) |

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

Available settings are explained as follows:

Item	Description
Mode	<p>There are two modes offered here for you to choose. Each mode will bring different filtering effect to the users involved.</p> <p><b>User-Based</b> - If you choose such mode, the router will apply the filter rules configured in <b>User Management&gt;&gt;User Profile</b> to the users.</p> <p><b>Rule-Based</b> -If you choose such mode, the router will apply the filter rules configured in <b>Firewall&gt;&gt;General Setup</b> and <b>Filter Rule</b> to the users.</p>
Web Authentication	Choose the protocol for web authentication.
Landing Page	Type the information to be displayed on the first web page when the LAN user accessing into Internet via such router.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.6.2 User Profile

This page allows you to set customized profiles (up to 200) which will be applied for users controlled under **User Management**. Simply open **User Management>>User Profile**.

[User Management >> User Profile](#)

Available settings are explained as follows:

Item	Description
<b>Enable this account</b>	Check this box to enable such user profile.
<b>User Name</b>	Type a name for such user profile (e.g., <i>LAN_User_Group_1</i> , <i>WLAN_User_Group_A</i> , <i>WLAN_User_Group_B</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the User Name specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router. However the accessing operation will be restricted with the conditions configured in this user profile.
<b>Password</b>	Type a password for such profile (e.g., <i>lug123</i> , <i>wug123</i> , <i>wug456</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the password specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router with the limitation configured in this user profile.
<b>Confirm Password</b>	Type the password again for confirmation.
<b>Idle Timeout</b>	If the user is idle over the limitation of the timer, the <b>network connection will be stopped for such user</b> . By default, the Idle Timeout is set to 10 minutes.
<b>Max User Login</b>	Such profile can be used by many users. You can set the limitation for the number of users accessing Internet with the conditions of such profile. The default setting is 0 which means no limitation in the number of users.
<b>Policy</b>	<p>It is available only when <b>User-Based</b> mode selected in <b>User Management&gt;&gt;General Setup</b>.</p>  <p><b>Default</b> – If you choose such item, the filter rules pre-configured in <b>Firewall</b> can be adopted for such user profile.</p> <p><b>Create New Policy</b> – If you choose such item, the following page will be popped up for you to define another filter rule as a new policy.</p>

	<p><b>Firewall &gt;&gt; Edit Filter Set &gt;&gt; Edit Filter Rule</b></p> <hr/> <p><b>Filter Set 1 Rule 2</b></p> <p>Comments: <input type="text"/></p> <p>Index(1-15) in <b>Schedule</b> Setup: <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <hr/> <p>Direction: <input type="text" value="LAN/RT/VPN -&gt; WAN"/></p> <p>Source IP: <input type="text" value="Any"/></p> <p>Destination IP: <input type="text" value="Any"/></p> <p>Service Type: <input type="text" value="Any"/></p> <p>Fragments: <input type="text" value="Don't Care"/></p> <p>For the detailed configuration, simply refer to <b>Firewall&gt;&gt;Filter Rule</b>. The firewall filter rules that are not selected in <b>Firewall&gt;&gt;General&gt;&gt;Default rule</b> can be available for use in <b>User Management&gt;&gt;User Profile</b>.</p>
<b>External Service Authentication</b>	<p>The router will authenticate the dial-in user by itself or by external service such as LDAP server or Radius server. If LDAP or Radius is selected here, it is not necessary to configure the password setting above.</p> <p><input type="text" value="None"/></p> <p>None LDAP Radius</p>
<b>Log</b>	<p>Time of login/log out, block/unblock for the user(s) can be sent to and displayed in Syslog. Please choose any one of the log items to take down relational records for the user(s).</p> <p><input type="text" value="None"/></p> <p>None Login Event All</p>
<b>Pop Browser Tracking Window</b>	<p>If such function is enabled, a pop up window will be displayed on the screen with time remaining for connection if Idle Timeout is set. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection.</p>
<b>Authentication</b>	<p>Any user (from LAN side or WLAN side) tries to connect to Internet via Vigor router must be authenticated by the router first. There are three ways offered by the router for the user to choose for authentication.</p> <p><b>Web</b> – If it is selected, the use can type the URL of the router from any browser. Then, a login window will be popped up and ask the user to type the user name and password for authentication. If succeed, a <b>Welcome Message</b> (configured in <b>User Management &gt;&gt; General Setup</b>) will be displayed. After authentication, the destination URL (if requested by the user) will be guided automatically by the router.</p> <p><b>Alert Tool</b> – If it is selected, the user can open Alert Tool and type the user name and password for authentication. A</p>

	<p>window with remaining time of connection for such user will be displayed. Next, the user can access Internet through any browser on Windows. Note that Alert Tool can be downloaded from DrayTek web site.</p> <p><b>Telnet</b> – If it is selected, the user can use Telnet command to perform the authentication job.</p>
<b>Landing Page</b>	<p>When a user tries to access into the web configurator of Vigor router series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in <b>User Management&gt;&gt;General Setup</b>.</p> <p>Check this box to enable such function.</p>
<b>Index (1-15) in Schedule Setup</b>	<p>You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>
<b>Enable Time Quota</b>	<p>Time quota means the total connection time allowed by the router for the user with such profile. Check the box to enable the function of time quota. The first box displays the remaining time of the network connection. The second box allows to type the number of time (unit is minute) which is available for the user (using such profile) to access Internet.</p> <p> – Click this box to set and increase the time quota for such profile.</p> <p> – Click this box to decrease the time quota for such profile.</p> <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p><b>Note:</b> A dialog will be popped up to notify how many time remained when a user accesses into Internet through Vigor router successfully.</p>  <p>When the time is up, all the connection jobs including network, IM, social media, facebook, and etc. will be terminated.</p> </div>
<b>Enable Data Quota</b>	<p>Data Quota means the total amount for data transmission allowed for the user. The unit is MB/GB.</p> <p> – Click this box to set and increase the data quota for such profile.</p>

	 – Click this box to decrease the data quota for such profile.
<b>Reset quota to default when scheduling time expired</b>	<p>Set default time quota and data quota for such profile. When the scheduling time is up, the router will use the default quota settings automatically.</p> <p><b>Enable</b> – Check it to use the default setting for time quota and data quota.</p> <p><b>Default Time Quota</b> – Type the value for the time manually.</p> <p><b>Default Data Quota</b> – Type the value for the data manually.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 3.6.3 User Group

This page allows you to bind several user profiles into one group. These groups will be used in **Firewall>>General Setup** as part of filter rules.

User Group Table:

| [Set to Factory Default](#) |

Index	Name	Index	Name
<a href="#">1.</a>		<a href="#">17.</a>	
<a href="#">2.</a>		<a href="#">18.</a>	
<a href="#">3.</a>		<a href="#">19.</a>	
<a href="#">4.</a>		<a href="#">20.</a>	
<a href="#">5.</a>		<a href="#">21.</a>	
<a href="#">6.</a>		<a href="#">22.</a>	
<a href="#">7.</a>		<a href="#">23.</a>	
<a href="#">8.</a>		<a href="#">24.</a>	
<a href="#">9.</a>		<a href="#">25.</a>	
<a href="#">10.</a>		<a href="#">26.</a>	
<a href="#">11.</a>		<a href="#">27.</a>	
<a href="#">12.</a>		<a href="#">28.</a>	
<a href="#">13.</a>		<a href="#">29.</a>	
<a href="#">14.</a>		<a href="#">30.</a>	
<a href="#">15.</a>		<a href="#">31.</a>	
<a href="#">16.</a>		<a href="#">32.</a>	

Please click any index number link to open the following page.

Available settings are explained as follows:

Item	Description
<b>Name</b>	Type a name for this user group.
<b>Available User Objects</b>	You can gather user profiles (objects) from <b>User Profile</b> page within one user group. All the available user objects that you have created will be shown in this box. Notice that user object, Admin and Dial-In User are factory settings. User defined profiles will be numbered with 3, 4, 5 and so on.
<b>Selected Keyword Objects</b>	Click  button to add the selected user objects in this box.

This page displays the user(s) connected to the router and refreshes the connection status in an interval of several seconds.

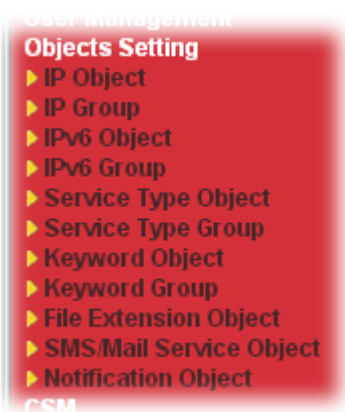

Total Number : 1

Available settings are explained as follows:

Item	Description
<b>Refresh Seconds</b>	<p>Use the drop down list to choose the time interval of refreshing data flow that will be done by the system automatically.</p> <p>Refresh Seconds: </p>
<b>Refresh</b>	Click this link to refresh this page manually.
<b>Index</b>	Display the number of the data flow.
<b>Active User</b>	Display the users which connect to Vigor router currently. You can click the link under the username to open the user profile setting page for that user.
<b>IP Address</b>	Display the IP address of the device.
<b>User</b>	Display the users which connect to Vigor router currently. You can click the link under the username to open the user profile setting page for that user.
<b>Last Login Time</b>	Display the login time that such user connects to the router last time.
<b>Expired Time</b>	Display the expired time of the network connection for the user.
<b>Idle Time</b>	Display the idle timeout setting for such profile.
<b>Action</b>	<p><b>Block</b> - can prevent specified user accessing into Internet.</p> <p><b>Unblock</b> – the user will be blocked.</p> <p><b>Logout</b> – the user will be logged out forcefully.</p>

## 3.7 Objects Settings

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group that can apply it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

### 3.7.1 IP Object

You can set up to 192 sets of IP Objects with different conditions.

Objects Setting >> IP Object

IP Object Profiles:		<a href="#">Set to Factory Default</a>	
Index	Name	Index	Name
<a href="#">1.</a>		<a href="#">17.</a>	
<a href="#">2.</a>		<a href="#">18.</a>

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for this profile.

Type a name for such profile and check all the items of file extension that will be processed in the router. Finally, click **OK** to save this profile.

### 3.7.10 SMS/Mail Service Object

#### SMS Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
1.		kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Index	Display the profile number that you can configure.
Profile	Display the name for such SMS profile.
SMS Provider	Display the service provider which offers SMS service.

To set a new profile, please do the steps listed below:

1. Click the **SMS Provider** tab, and click the number (e.g., #1) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server
Index	Profile Name
1.	
2.	
3.	
4.	
5.	

- The configuration page will be shown as follows:

Object Settings >> SMS / Mail Service Object

Profile Index: 1

Profile Name	<input type="text" value="Line_down"/>
Service Provider	<input type="text" value="kotsms.com.tw (TW)"/>
Username	<input type="text" value="line1"/>
Password	<input type="password" value="••••"/>
Quota	<input type="text" value="10"/>
Sending Interval	<input type="text" value="3"/> (seconds)

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for such SMS profile. The maximum length of the name you can set is 31 characters.
<b>Service Provider</b>	Use the drop down list to specify the service provider which offers SMS service.
<b>Username</b>	Type a user name that the sender can use to register to selected SMS provider. The maximum length of the name you can set is 31 characters.
<b>Password</b>	Type a password that the sender can use to register to selected SMS provider. The maximum length of the password you can set is 31 characters.
<b>Quota</b>	Type the number of the credit that you purchase from the service provider chosen above. Note that one credit equals to one SMS text message on the standard route.
<b>Sending Interval</b>	To avoid quota being exhausted soon, type time interval for sending the SMS.

- After finishing all the settings here, please click **OK** to save the configuration.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	<a href="#">Set to Factory Default</a>
Index	Profile Name	SMS Provider	
1.	Line_down	kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	

## Customized SMS Service

Vigor router offers several SMS service provider to offer the SMS service. However, if your service provider cannot be found from the service provider list, simply use Index 9 and Index 10 to make customized SMS service. The profile name for Index 9 and Index 10 are fixed.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server	Set to Factory Default	
Index	Profile Name	SMS Provider	
1.		kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

You can click the number (e.g., #9) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

Profile Index: 9

Profile Name	<input type="text" value="Custom 1"/>
Service Provider	<input type="text"/>
<div style="border: 1px solid #ccc; height: 40px; margin-top: 5px;"></div>	
<p>Please contact with your SMS provide to get the exact URL String  eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser###&amp;password=###txtPwd###&amp;msisdn=###txtDest###&amp;message=###txtMsg###</p>	
Username	<input type="text"/>
Password	<input type="text"/>
Quota	<input type="text" value="10"/>
Sending Interval	<input type="text" value="3"/> (seconds)

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Display the name of this profile. It cannot be modified.
<b>Service Provider</b>	Type the website of the service provider. Type the URL string in the box under the filed of Service Provider. You have to contact your SMS provider to obtain the exact URL string.
<b>Username</b>	Type a user name that the sender can use to register to selected SMS provider. The maximum length of the name you can set is 31 characters.

<b>Password</b>	Type a password that the sender can use to register to selected SMS provider. The maximum length of the password you can set is 31 characters.
<b>Quota</b>	Type the total number of the messages that the router will send out.
<b>Sending Interval</b>	Type the shortest time interval for the system to send SMS.

After finishing all the settings here, please click **OK** to save the configuration.

## Mail Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

[Object Settings >> SMS / Mail Service Object](#)

<input type="checkbox"/> Use SSL	
<input checked="" type="checkbox"/> <b>Authentication</b>	
Username	<input type="text" value="John"/>
Password	<input type="password" value="••••"/>
Sending Interval	<input type="text" value="0"/> (seconds)

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for such mail service profile. The maximum length of the name you can set is 31 characters.
<b>SMTP Server</b>	Type the IP address of the mail server. The maximum length of the name you can set is 63 characters.
<b>SMTP Port</b>	Type the port number for SMTP server.
<b>Sender Address</b>	Type the e-mail address of the sender.
<b>Use SSL</b>	Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.
<b>Authentication</b>	<p>The mail server must be authenticated with the correct username and password to have the right of sending message out. Check the box to enable the function.</p> <p><b>Username</b> – Type a name for authentication. The maximum length of the name you can set is 31 characters.</p> <p><b>Password</b> – Type a password for authentication. The maximum length of the password you can set is 31 characters.</p>

<b>Sending Interval</b>	Define the interval for the system to send the SMS out.
-------------------------	---

- After finishing all the settings here, please click **OK** to save the configuration.

**Object Settings >> SMS / Mail Service Object**

SMS Provider	Mail Server	<a href="#">Set to Factory Default</a>

## 3.8 CSM Profile

### Content Security Management (CSM)

CSM is an abbreviation of **Content Security Management** which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

### APP Enforcement Filter

As the popularity of all kinds of instant messenger application arises, communication cannot become much easier. Nevertheless, while some industry may leverage this as a great tool to connect with their customers, some industry may take reserve attitude in order to reduce employee misuse during office hour or prevent unknown security leak. It is similar situation for corporation towards peer-to-peer applications since file-sharing can be convenient but insecure at the same time. To address these needs, we provide CSM functionality.

### URL Content Filter

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

### Web Content Filter

We all know that the content on the Internet just like other types of media may be inappropriate sometimes. As a responsible parent or employer, you should protect those in your trust against the hazards. With Web filtering service of the Vigor router, you can protect your business from common primary threats, such as productivity, legal liability, network and security threats. For parents, you can protect your children from viewing adult websites or chat rooms.

Once you have activated your Web Filtering service in Vigor router and chosen the categories of website you wish to restrict, each URL address requested (e.g. www.bbc.co.uk) will be checked against our server database. This database is updated as frequent as daily by a global team of Internet researchers. The server will look up the URL and return a category to your router. Your Vigor router will then decide whether to allow access to this site according to the categories you have selected. Please note that this action will not introduce any delay in your Web surfing because each of multiple load balanced database servers can handle millions of requests for categorization.

<b>Note:</b> The priority of URL Content Filter is higher than Web Content Filter.
--

### 3.8.1 APP Enforcement Profile

You can define policy profiles for IM (Instant Messenger)/P2P (Peer to Peer)/Protocol/Misc application. This page allows you to set 32 profiles for different requirements. The APP Enforcement Profile will be applied in **Default Rule** of **Firewall>>General Setup** for filtering.

CSM >> APP Enforcement Profile

APP Enforcement Profile Table:

[Set to Factory Default](#)

Profile	Name	Profile	Name
<a href="#">1.</a>		<a href="#">17.</a>	
<a href="#">2.</a>		<a href="#">18.</a>	
<a href="#">3.</a>		<a href="#">19.</a>

### 3.8.2 URL Content Filter Profile

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

For example, if you add key words such as "sex", Vigor router will limit web access to web sites or web pages such as "www.sex.com", "www.backdoor.net/images/sex/p\_386.html". Or you may simply specify the full or partial URL such as "www.sex.com" or "sex.com".

Also the Vigor router will discard any request that tries to retrieve the malicious code.

Click **CSM** and click **URL Content Filter Profile** to open the profile setting page.

CSM >> URL Content Filter Profile

URL Content Filter Profile Table:

[Set to Factory Default](#)

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profiles.
Profile	Display the number of the profile which allows you to click to set different policy.
Name	Display the name of the URL Content Filter Profile.

<b>Administration Message</b>	<p>You can type the message manually for your necessity.</p> <p><b>Default Message</b> - You can type the message manually for your necessity or click this button to get the default message which will be displayed on the field of <b>Administration Message</b>.</p>
-------------------------------	--

You can set eight profiles as URL content filter. Simply click the index number under Profile to open the following web page.

CSM >> URL Content Filter Profile

**Profile Index: 1**

**Profile Name:**

**Priority:**  **Log:**

**1.URL Access Control**

☐ Enable URL Access Control ☐ Prevent web access from IP address

Action:  Group/Object Selections:

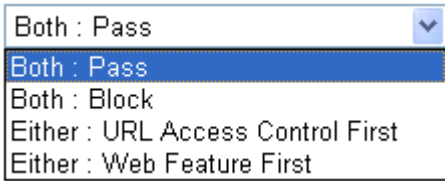

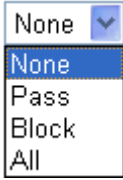

**2.Web Feature**

☐ Enable Restrict Web Feature

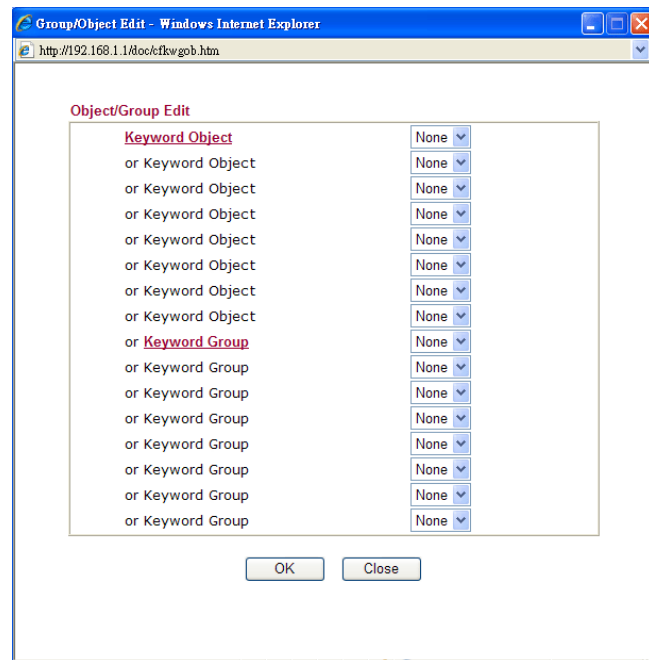

Action:  ☐ Cookie ☐ Proxy ☐ Upload **File Extension Profile:**

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for the CSM profile.
<b>Priority</b>	<p>It determines the action that this router will apply.</p> <p><b>Both: Pass</b> – The router will let all the packages that match with the conditions specified in URL Access Control and Web Feature below passing through. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p><b>Both:Block</b> –The router will block all the packages that match with the conditions specified in URL Access Control and Web Feature below. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p><b>Either: URL Access Control First</b> – When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for URL first, then Web feature second.</p> <p><b>Either: Web Feature First</b> –When all the packages matching with the conditions specified in URL Access</p>

	<p>Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for web feature first, then URL second.</p> 
<b>Log</b>	<p><b>None</b> – There is no log file will be recorded for this profile.  <b>Pass</b> – Only the log about Pass will be recorded in Syslog.  <b>Block</b> – Only the log about Block will be recorded in Syslog.  <b>All</b> – All the actions (Pass and Block) will be recorded in Syslog.</p> 
<b>URL Access Control</b>	<p><b>Enable URL Access Control</b> - Check the box to activate URL Access Control. Note that the priority for <b>URL Access Control</b> is higher than <b>Restrict Web Feature</b>. If the web content match the setting set in URL Access Control, the router will execute the action specified in this field and ignore the action specified under Restrict Web Feature.</p> <p><b>Prevent web access from IP address</b> - Check the box to deny any web surfing activity using IP address, such as http://202.6.3.2. The reason for this is to prevent someone dodges the URL Access Control. You must clear your browser cache first so that the URL content filtering facility operates properly on a web page that you visited before.</p> <p><b>Action</b> – This setting is available only when <b>Either : URL Access Control First</b> or <b>Either : Web Feature First</b> is selected. <b>Pass</b> - Allow accessing into the corresponding webpage with the keywords listed on the box below.  <b>Block</b> - Restrict accessing into the corresponding webpage with the keywords listed on the box below.  If the web pages do not match with the keyword set here, it will be processed with reverse action.</p> <p>Action:</p>  <p><b>Group/Object Selections</b> – The Vigor router provides several frames for users to define keywords and each frame supports multiple keywords. The keyword could be a noun, a partial noun, or a complete URL string. Multiple</p>

keywords within a frame are separated by space, comma, or semicolon. In addition, the maximal length of each frame is 32-character long. After specifying keywords, the Vigor router will decline the connection request to the website whose URL string matched to any user-defined keyword. It should be noticed that the more simplified the blocking keyword list is, the more efficiently the Vigor router performs.

## Web Feature

**Enable Restrict Web Feature** - Check this box to make the keyword being blocked or passed.

**Action** - This setting is available only when **Either: URL Access Control First** or **Either: Web Feature First** is selected. **Pass** allows accessing into the corresponding webpage with the keywords listed on the box below.

**Pass** - Allow accessing into the corresponding webpage with the keywords listed on the box below.

**Block** - Restrict accessing into the corresponding webpage with the keywords listed on the box below.

If the web pages do not match with the specified feature set here, it will be processed with reverse action.

**Cookie** - Check the box to filter out the cookie transmission from inside to outside world to protect the local user's privacy.

**Proxy** - Check the box to reject any proxy transmission. To control efficiently the limited-bandwidth usage, it will be of great value to provide the blocking mechanism that filters out the multimedia files downloading from web pages.

**Upload** - Check the box to block the file upload by way of web page.

**File Extension Profile** - Choose one of the profiles that you configured in **Object Setting>> File Extension Objects** previously for passing or blocking the file downloading.

	<b>File Extension Profile:</b> <div style="display: inline-block; border: 1px solid black; padding: 2px;"> None ▼ <div style="border: 1px solid black; margin-top: 2px; padding: 2px;"> None 1-default </div> </div>
--	--

After finishing all the settings, please click **OK** to save the configuration.

### 3.8.3 Web Content Filter Profile

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

Service Activation Wizard allows you to use trial version or update the license of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>.

However, if you use the **Web Content Filter Profile** page to activate WCF feature, it is necessary for you to access into the server (**MyVigor**) located on <http://myvigor.draytek.com>. Therefore, you need to register an account on <http://myvigor.draytek.com> for using corresponding service. Please refer to section of creating MyVigor account.

**Note:** If you have used **Service Activation Wizard** to activate WCF service, you can skip this section.

WCF adopts the mechanism developed and offered by certain service provider (e.g., DrayTek). No matter activating WCF feature or getting a new license for web content filter, you have to click **Activate** to satisfy your request. Be aware that service provider matching with Vigor router currently offers a period of time for trial version for users to experiment. If you want to purchase a formal edition, simply contact with the channel partner or your dealer.

Click **CSM** and click **Web Content Filter Profile** to open the profile setting page. The default setting for Setup Query Server /Setup Test Server is **auto-selected**. You can choose another server for your necessity by clicking **Find more** to open <http://myvigor.draytek.com> for searching another qualified and suitable one.

**Note 1:** Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by **CommTouch**. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

**Note 2:** CommTouch is merged by **Cyren**, and **GlobalView** services will be continued to deliver powerful cloud-based information security solutions! Refer to:

http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html

Cache : [L1 + L2 Cache](#)

<body><center><br><br><br><p>The requested Web page <br> from %SIP% <br>to %URL% <br>that is categorized with %CL% <br>has been blocked by %RNAME% Web Content Filter.<p>Please contact your system administrator for further information.</center></body>

Legend:

%SIP% - Source IP , %DIP% - Destination IP , %URL% - URL  
%CL% - Category , %RNAME% - Router Name

OK

Available settings are explained as follows:

Item	Description
<b>Activate</b>	Click it to access into MyVigor for activating WCF service.
<b>Setup Query Server</b>	It is recommended for you to use the default setting, auto-selected. You need to specify a server for categorize searching when you type URL in browser based on the web content filter profile.
<b>Setup Test Server</b>	It is recommended for you to use the default setting, auto-selected.
<b>Find more</b>	Click it to open <a href="http://myvigor.draytek.com">http://myvigor.draytek.com</a> for searching another qualified and suitable server.
<b>Test a site to verify whether it is categorized</b>	Click this link to do the verification.
<b>Set to Factory Default</b>	Click this link to retrieve the factory settings.
<b>Default Message</b>	You can type the message manually for your necessity or click this button to get the default message which will be displayed on the field of <b>Administration Message</b> .

<b>Cache</b>	<p><b>None</b> – the router will check the URL that the user wants to access via WCF precisely, however, the processing rate is normal. Such item can provide the most accurate URL matching.</p> <p><b>L1</b> – the router will check the URL that the user wants to access via WCF. If the URL has been accessed previously, it will be stored for a short time (about 1 second) in the router to be accessed quickly if required. Such item can provide accurate URL matching with faster rate.</p> <p><b>L2</b> – the router will check the URL that the user wants to access via WCF. If the data has been accessed previously, the IP addresses of source and destination IDs will be memorized for a short time (about 1 second) in the router. When the user tries to access the same destination ID, the router will check it by comparing the record stored. If it matches, the page will be retrieved quickly. Such item can provide URL matching with the fastest rate.</p> <p><b>L1+L2 Cache</b> – the router will check the URL with fast processing rate combining the feature of L1 and L2.</p>
--------------	---

Eight profiles are provided here as Web content filters. Simply click the index number under Profile to open the following web page. The items listed in Categories will be changed according to the different service providers. If you have and activate another web content filter license, the items will be changed simultaneously. All of the configuration made for web content filter will be deleted automatically. Therefore, please backup your data before you change the web content filter license.

After finishing all the settings, please click **OK** to save the configuration.

### 3.8.4 DNS Filter

The DNS Filter monitors DNS queries on UDP port 53 and will pass the DNS query information to the WCF to help with categorizing HTTPS URL's.

**Note:** For DNS filter must use the WCF service profile to filter the packets, therefore WCF license must be activated first. Otherwise, DNS filter does not have any effect on packets.

CSM >> DNS Filter

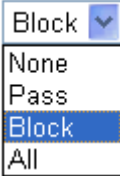

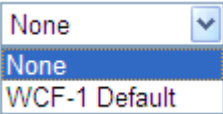

#### DNS Filter

<b>DNS Filter</b>	<input type="checkbox"/> Enable
<b>Syslog</b>	None ▼
<b>Service</b>	None ▼
<b>Cache Time(hour)</b>	1 ▼

OK Cancel

Available settings are explained as follows:

Item	Description
<b>DNS Filter</b>	Check Enable to enable such feature.

<b>Syslog</b>	<p>The filtering result can be recorded according to the setting selected for Syslog.</p> <p><b>None</b> – There is no log file will be recorded for this profile.</p> <p><b>Pass</b> – Only the log about Pass will be recorded in Syslog.</p> <p><b>Block</b> – Only the log about Block will be recorded in Syslog.</p> <p><b>All</b> – All the actions (Pass and Block) will be recorded in Syslog.</p> 
<b>Service</b>	<p>Set the filtering conditions. Specify one of the WCF profiles as Service.</p>  <p>Choose the WCF profiles to apply DNS filter.</p>
<b>Cache Time (hour)</b>	Set the time for DNS query.

After finishing all the settings, please click **OK** to save the configuration.

### 3.8.5 APPE Support List

Such page lists all the information (name, version and note) about IM, P2P, Protocol and others applications that Vigor router supports for APPE function.

#### CSM >> APPE Support List

This charts lists out the APP Enforcement supported by Vigor routers.  
Last update on 2013-09-18

IM	P2P	PROTOCOL	OTHERS
APP Type	APP Name	Version	Note
IM	AIM	5.9	
	AIM	6/7	Only block Login. If users have already logged in, AIM services can not be blocked.
	AliWW	2008	
	Ares	2.0.9	
	BaiduHi	37378	
	Fetion	2010	
	GaduGadu Protocol		
	Google Chat		
	ICQ	7	In ICQ6, if Videos are blocked, Voices will be blocked at the same time. In ICQ5 or former versions, Videos and Voices can be blocked separately.
	ICU2	8.0.6	
	Jabber Protocol/Google Talk		
	KC	2008	
	LINE	3.1.10.37	To block LINE for PC and mobile phone.
	Lava-Lava	2007	
	MSN	2011	

### 3.9 Bandwidth Management

Below shows the menu items for Bandwidth Management.

### 3.9.1 Sessions Limit

A PC with private IP address can access to the Internet via NAT router. The router will generate the records of NAT sessions for such connection. The P2P (Peer to Peer) applications (e.g., BitTorrent) always need many sessions for proccession and also they will occupy over resources which might result in important accesses impacted. To solve the problem, you can use limit session to limit the session proccession for specified Hosts.

In the **Bandwidth Management** menu, click **Sessions Limit** to open the web page.

[Bandwidth Management >> Sessions Limit](#)

**Sessions Limit**

☐ Enable ☒ Disable

Default Max Sessions:

**Limitation List**

Index	Start IP	End IP	Max Sessions
-------	----------	--------	--------------

**Specific Limitation**

Start IP:  End IP:

Maximum Sessions:

**Administration Message** (Max 256 characters)

You have reached the maximum number of permitted Internet sessions.<p>Please close one or more applications to allow further Internet access.<p>Contact your system administrator for further information.

**Time Schedule**

Index(1-15) in **Schedule** Setup: , , ,

**Note:** Action and Idle Timeout settings will be ignored.

To activate the function of limit session, simply click **Enable** and set the default session limit. Available settings are explained as follows:

Item	Description
<b>Session Limit</b>	<b>Enable</b> - Click this button to activate the function of limit session. <b>Disable</b> - Click this button to close the function of limit session. <b>Default session limit</b> - Defines the default session number used for each computer in LAN.
<b>Limitation List</b>	Displays a list of specific limitations that you set on this web page.

<b>Specific Limitation</b>	<p><b>Start IP</b>- Defines the start IP address for limit session.</p> <p><b>End IP</b> - Defines the end IP address for limit session.</p> <p><b>Maximum Sessions</b> - Defines the available session number for each host in the specific range of IP addresses. If you do not set the session number in this field, the system will use the default session limit for the specific limitation you set for each index.</p> <p><b>Add</b> - Adds the specific session limitation onto the list above.</p> <p><b>Edit</b> - Allows you to edit the settings for the selected limitation.</p> <p><b>Delete</b> - Remove the selected settings existing on the limitation list.</p>
<b>Administration Message</b>	<p>Type the words which will be displayed when reaches the maximum number of Internet sessions permitted.</p> <p>Click <b>Default Message</b> to display the default message on the screen.</p>
<b>Time Schedule</b>	<p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

### 3.9.2 Bandwidth Limit

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Limit Bandwidth to make the bandwidth usage more efficient.

In the **Bandwidth Management** menu, click **Bandwidth Limit** to open the web page.

[Bandwidth Management >> Bandwidth Limit](#)

#### Bandwidth Limit

☐ **Enable** ☐ IP Routed Subnet ☒ **Disable**

Default TX Limit:   Default RX Limit:

☐ Allow auto adjustment to make the best utilization of **available bandwidth**.

**Limitation List**

Index	Start IP	End IP	TX limit	RX limit	Shared
-------	----------	--------	----------	----------	--------

**Specific Limitation**

Start IP:  End IP:

☒ **Each** ☐ **Shared** TX Limit:   RX Limit:

☐ **Smart Bandwidth Limit**

For any LAN IP Not in Limitation List, when session number exceeds

TX Limit :   RX Limit :

**Note :** For TX/RX, a setting of "0" means unlimited bandwidth.

#### Time Schedule

Index(1-15) in [Schedule](#) Setup: , , ,

**Note:** Action and Idle Timeout settings will be ignored.

OK

To activate the function of limit bandwidth, simply click **Enable** and set the default upstream and downstream limit.

Available settings are explained as follows:

Item	Description
<b>Bandwidth Limit</b>	<b>Enable</b> - Click this button to activate the function of limit bandwidth. <b>IP Routed Subnet</b> - Check this box to apply the bandwidth limit to the second subnet specified in <b>LAN&gt;&gt;General Setup</b> . <b>Disable</b> - Click this button to close the function of limit bandwidth. <b>Default TX limit</b> - Define the default speed of the upstream

	<p>for each computer in LAN.</p> <p><b>Default RX limit</b> - Define the default speed of the downstream for each computer in LAN.</p> <p><b>Allow auto adjustment</b>...- Check this box to make the best utilization of available bandwidth.</p>
<b>Limitation List</b>	Display a list of specific limitations that you set on this web page.
<b>Specific Limitation</b>	<p><b>Start IP</b> - Define the start IP address for limit bandwidth.</p> <p><b>End IP</b> - Define the end IP address for limit bandwidth.</p> <p><b>Each /Shared</b> - Select <b>Each</b> to make each IP within the range of Start IP and End IP having the same speed defined in TX limit and RX limit fields; select <b>Shared</b> to make all the IPs within the range of Start IP and End IP share the speed defined in TX limit and RX limit fields.</p> <p><b>TX limit</b> - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>RX limit</b> - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>Add</b> - Add the specific speed limitation onto the list above.</p> <p><b>Edit</b> - Allow you to edit the settings for the selected limitation.</p> <p><b>Delete</b> - Remove the selected settings existing on the limitation list.</p>
<b>Smart Bandwidth Limit</b>	<p>Check this box to have the bandwidth limit determined by the system automatically.</p> <p><b>TX limit</b> - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>RX limit</b> - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p>
<b>Time Schedule</b>	<p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

### 3.9.3 Quality of Service

Deploying QoS (Quality of Service) management to guarantee that all applications receive the service levels required and sufficient bandwidth to meet performance expectations is indeed one important aspect of modern enterprise network.

One reason for QoS is that numerous TCP-based applications tend to continually increase their transmission rate and consume all available bandwidth, which is called TCP slow start. If other applications are not protected by QoS, it will detract much from their performance in the overcrowded network. This is especially essential to those are low tolerant of loss, delay or jitter (delay variation).

Another reason is due to congestions at network intersections where speeds of interconnected circuits mismatch or traffic aggregates, packets will queue up and traffic can be throttled back to a lower speed. If there's no defined priority to specify which packets should be discarded (or in another term "dropped") from an overflowing queue, packets of sensitive applications mentioned above might be the ones to drop off. How this will affect application performance?

There are two components within Primary configuration of QoS deployment:

- **Classification:** Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- **Scheduling:** Based on classification of service level to assign packets to queues and associated service types

The basic QoS implementation in Vigor routers is to classify and schedule packets based on the service type information in the IP header. For instance, to ensure the connection with the headquarter, a teleworker may enforce an index of QoS Control to reserve bandwidth for HTTPS connection while using lots of application at the same time.

One more larger-scale implementation of QoS network is to apply DSCP (Differentiated Service Code Point) and IP Precedence disciplines at Layer 3. Compared with legacy IP Precedence that uses Type of Service (ToS) field in the IP header to define 8 service classes, DSCP is a successor creating 64 classes possible with backward IP Precedence compatibility. In a QoS-enabled network, or Differentiated Service (DiffServ or DS) framework, a DS domain owner should sign a Service License Agreement (SLA) with other DS domain owners to define the service level provided toward traffic from different domains. Then each DS node in these domains will perform the priority treatment. This is called per-hop-behavior (PHB). The definition of PHB includes Expedited Forwarding (EF), Assured Forwarding (AF), and Best Effort (BE). AF defines the four classes of delivery (or forwarding) classes and three levels of drop precedence in each class.

Vigor routers as edge routers of DS domain shall check the marked DSCP value in the IP header of bypassing traffic, thus to allocate certain amount of resource execute appropriate policing, classification or scheduling. The core routers in the backbone will do the same checking before executing treatments in order to ensure service-level consistency throughout the whole QoS-enabled network.

However, each node may take different attitude toward packets with high priority marking since it may bind with the business deal of SLA among different DS domain owners. It's not easy to achieve deterministic and consistent high-priority QoS traffic throughout the whole network with merely Vigor router's effort.

In the **Bandwidth Management** menu, click **Quality of Service** to open the web page.

**Bandwidth Management >> Quality of Service**

**General Setup**

 SIP UDP Port:  (Default: 5060)
 

[OK](#)

Available settings are explained as follows:

Item	Description
<b>General Setup</b>	<p><b>Index</b> - Display the WAN interface number that you can edit.</p> <p><b>Status</b> - Display if the WAN interface is available for such function or not.</p> <p><b>Bandwidth</b> - Display the inbound and outbound bandwidth setting for the WAN interface.</p> <p><b>Direction</b> - Display which direction that such function will influence.</p> <p><b>Class 1/Class2/Class 3/Others</b> - Display the bandwidth percentage for each class.</p> <p><b>UDP Bandwidth Control</b> - Display the UDP bandwidth control is enabled or not.</p> <p><b>Online Statistics</b> - Display an online statistics for quality of service for your reference</p> <p><b>Setup</b> - Allow to configure general QoS setting for WAN interface.</p>
<b>Class Rule</b>	<p><b>Index</b> - Display the class number that you can edit.</p> <p><b>Name</b> - Display the name of the class.</p> <p><b>Rule</b> - Allow to configure detailed settings for the selected Class.</p> <p><b>Service Type</b> - Allow to configure detailed settings for the service type.</p>

Item	Description
<b>Enable the First Priority for VoIP SIP/RTP</b>	When this feature is enabled, the VoIP SIP/UDP packets will be sent with highest priority. <b>SIP UDP Port</b> – Set a port number used for SIP.

This page displays the QoS settings result of the WAN interface. Click the **Setup** link to access into next page for the general setup of WAN interface. As to class rule, simply click the **Edit** link to access into next for configuration.

You can configure general setup for the WAN interface, edit the Class Rule, and edit the Service Type for the Class Rule for your request.

## Online Statistics

Display an online statistics for quality of service for your reference.

[Bandwidth Management >> Quality of Service](#)

## General Setup for WAN Interface

When you click **Setup**, you can configure the bandwidth ratio for QoS of the WAN interface. There are four queues allowed for QoS control. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. Yet, the last one is reserved for the packets which are not suitable for the user-defined class rules.

## WAN2 General Setup

☒ Enable the QoS Control
 OUT v

WAN Inbound Bandwidth	10000	Kbps	
WAN Outbound Bandwidth	10000	Kbps	

Index	Class Name	Reserved_bandwidth	Ratio
Class 1		25	%
Class 2		25	%
Class 3		25	%
	Others	25	%

☐ Enable UDP Bandwidth Control  
☐ Outbound TCP ACK Prioritize

Limited\_bandwidth Ratio 25 %

OK

Clear

Cancel

Available settings are explained as follows:

Item	Description
<b>Enable the QoS Control</b>	<p>The factory default for this setting is checked.</p> <p>Please also define which traffic the QoS Control settings will apply to.</p> <p><b>IN-</b> apply to incoming traffic only.</p> <p><b>OUT-</b> apply to outgoing traffic only.</p> <p><b>BOTH-</b> apply to both incoming and outgoing traffic.</p> <p>Check this box and click <b>OK</b>, then click <b>Setup</b> link again. You will see the <b>Online Statistics</b> link appearing on this page.</p>
<b>WAN Inbound Bandwidth</b>	<p>It allows you to set the connecting rate of data input for WAN2/WAN3. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 1000kbps for this box. The default value is 10000kbps.</p>
<b>WAN Outbound Bandwidth</b>	<p>It allows you to set the connecting rate of data output for WAN2/WAN3. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 256kbps for this box. The default value is 10000kbps.</p>
<b>Reserved Bandwidth Ratio</b>	<p>It is reserved for the group index in the form of ratio of <b>reserved bandwidth to upstream speed</b> and <b>reserved bandwidth to downstream speed</b>.</p>
<b>Enable UDP Bandwidth Control</b>	<p>Check this and set the limited bandwidth ratio on the right field. This is a protection of TCP application traffic since UDP application traffic such as streaming video will exhaust lots of bandwidth.</p>

<b>Outbound TCP ACK Prioritize</b>	The difference in bandwidth between download and upload are great in ADSL2+ environment. For the download speed might be impacted by the uploading TCP ACK, you can check this box to push ACK of upload faster to speed the network traffic.
<b>Limited_bandwidth Ratio</b>	The ratio typed here is reserved for limited bandwidth of UDP application.

**Note:** The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

## Edit the Class Rule for QoS

The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. To add, edit or delete the class rule, please click the **Edit** link of that one.

Port Configuration	
Type	<input checked="" type="radio"/> Single <input type="radio"/> Range
Port Number	<input type="text" value="0"/> - <input type="text" value="0"/>

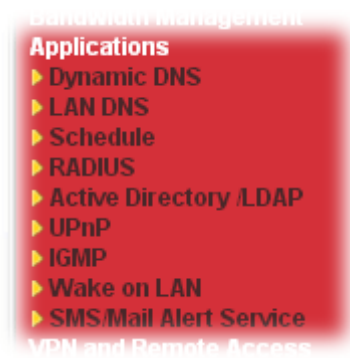

Available settings are explained as follows:

Item	Description
Service Name	Type in a new service for your request.
Service Type	Choose the type (TCP, UDP or TCP/UDP or other) for the new service.
Port Configuration	<b>Type</b> - Click <b>Single</b> or <b>Range</b> as the <b>Type</b> . If you select <b>Range</b> , you have to type in the starting port number and the end porting number on the boxes below. <b>Port Number</b> – Type in the starting port number and the end porting number here if you choose <b>Range</b> as the type.

By the way, you can set up to 10 service types. If you want to edit/delete an existed service type, please select the radio button of that one and click **Edit/Edit** for modification.

## 3.10 Applications

Below shows the menu items for Applications.

### 3.10.1 Dynamic DNS

The ISP often provides you with a dynamic IP address when you connect to the Internet via your ISP. It means that the public IP address assigned to your router changes each time you access the Internet. The Dynamic DNS feature lets you assign a domain name to a dynamic WAN IP address. It allows the router to update its online WAN IP address mappings on the specified Dynamic DNS server. Once the router is online, you will be able to use the registered domain name to access the router or internal virtual servers from the Internet. It is particularly helpful if you host a web server, FTP server, or other server behind the router.

Before you use the Dynamic DNS feature, you have to apply for free DDNS service to the DDNS service providers. The router provides up to three accounts from three different DDNS service providers. Basically, Vigor routers are compatible with the DDNS services supplied by most popular DDNS service providers such as **www.dyndns.org**, **www.no-ip.com**, **www.dtdns.com**, **www.changeip.com**, **www.dynamic-nameserver.com**. You should visit their websites to register your own domain name for the router.

### Enable the Function and Add a Dynamic DNS Account

1. Assume you have a registered domain name from the DDNS provider, say *hostname.dyndns.org*, and an account with username: *test* and password: *test*.
2. In the DDNS setup menu, check **Enable Dynamic DNS Setup**.

Applications >> Dynamic DNS Setup

Available settings are explained as follows:

Item	Description
<b>Enable Dynamic DNS Account</b>	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
<b>WAN Interface</b>	<p><b>WAN1/WAN2/WAN3 First</b> - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for such account. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.</p> <p><b>WAN1/WAN2/WAN3 Only</b> - While connecting, the router will use WAN1/WAN2/WAN3 as the only channel for such account.</p> <div> <span>WAN1 First</span> <ul style="list-style-type: none"> <li>WAN1 First</li> <li>WAN1 Only</li> <li>WAN2 First</li> <li>WAN2 Only</li> <li>WAN3 First</li> <li>WAN3 Only</li> </ul> </div>
<b>Service Provider</b>	Select the service provider for the DDNS account.
<b>Service Type</b>	Select a service type (Dynamic, Custom or Static). If you choose Custom, you can modify the domain that is chosen in the Domain Name field.
<b>Domain Name</b>	Type in one domain name that you applied previously. Use the drop down list to choose the desired domain.
<b>Login Name</b>	Type in the login name that you set for applying domain.
<b>Password</b>	Type in the password that you set for applying domain.
<b>Wildcard and Backup MX</b>	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.

<b>Mail Extender</b>	If the mail server is defined with another name, please type the name in this area. Such mail server will be used as backup mail exchange.
----------------------	--

- Click **OK** button to activate the settings. You will see your setting has been saved.

### Disable the Function and Clear all Dynamic DNS Accounts

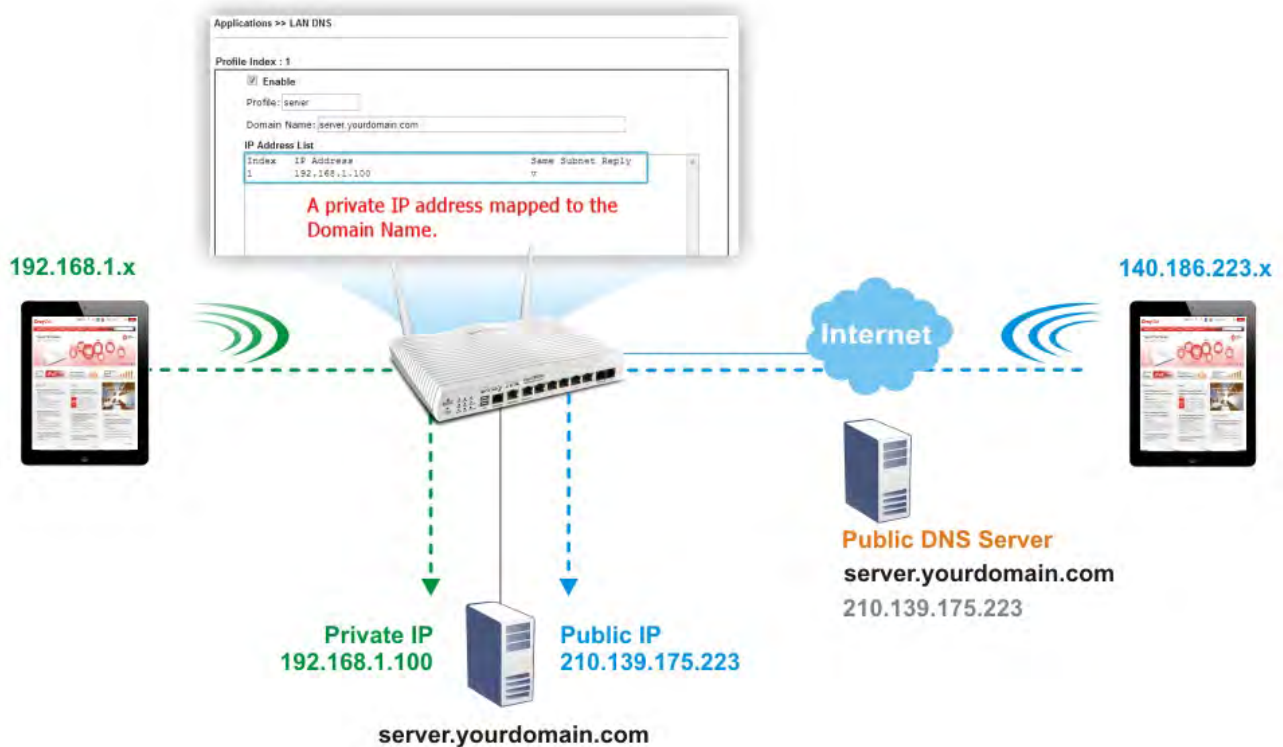

In the DDNS setup menu, uncheck **Enable Dynamic DNS Setup**, and push **Clear All** button to disable the function and clear all accounts from the router.

### Delete a Dynamic DNS Account

In the DDNS setup menu, click the **Index** number you want to delete and then push **Clear All** button to delete the account.

## 3.10.2 LAN DNS

LAN DNS is a simple version of DNS server. It is not necessary for the user to build another DNS server in LAN. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

Simply click **Application>>LAN DNS** to open the following page.

LAN DNS Resolution | [Set to Factory Default](#) |

Enable	Index	Profile	Domain Name
<input type="checkbox"/>	<a href="#">1.</a>		
<input type="checkbox"/>	<a href="#">2.</a>		
<input type="checkbox"/>	<a href="#">3.</a>		
<input type="checkbox"/>	<a href="#">4.</a>		
<input type="checkbox"/>	<a href="#">5.</a>		
<input type="checkbox"/>	<a href="#">6.</a>		
<input type="checkbox"/>	<a href="#">7.</a>		
<input type="checkbox"/>	<a href="#">8.</a>		
<input type="checkbox"/>	<a href="#">9.</a>		
<input type="checkbox"/>	<a href="#">10.</a>		

<< [1-10](#) | [11-20](#) >>

OK

Each item is explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles and recover to factory settings.
<b>Enable</b>	Check the box to enable the selected profile.
<b>Index</b>	Click the number below Index to access into the setting page.
<b>Profile</b>	Display the name of the LAN DNS profile.
<b>Domain Name</b>	Display the domain name of the LAN DNS profile.

You can set up to 20 LAN DNS profiles.

To create a LAN DNS profile:

1. Click any index, say Index No. 1.
2. The detailed settings with index 1 are shown below.

## Profile Index : 1

☒ **Enable**

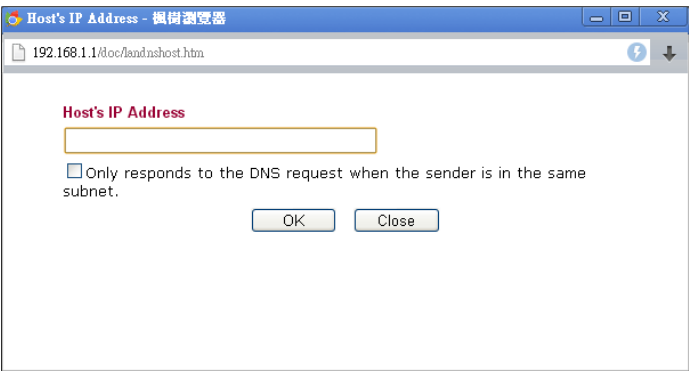

Profile:

Domain Name:

**IP Address List**

Index	IP Address	Same Subnet	Reply
1	172.16.3.8		

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable such profile.
<b>Profile</b>	Type a name for such profile.
<b>Domain Name</b>	Type the domain name for such profile.
<b>IP Address List</b>	<p>The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name.</p> <p><b>Add</b> – Click it to open a dialog to type the host's IP address.</p>  <ul style="list-style-type: none"> <li>● <b>Only responds to the DNS....</b> – Different LAN PCs can share the same domain name. However, you have to check this box to make the router identify &amp; respond the IP address for the DNS query coming from different LAN PC.</li> </ul> <p><b>Delete</b> – Click it to remove an existed IP address on the list.</p>

- Click **OK** button to save the settings.
- A new LAN DNS profile has been created.

## Applications >> LAN DNS

### LAN DNS Resolution

[Set to Factory Default](#)

Enable	Index	Profile	Domain Name
<input checked="" type="checkbox"/>	1.	MAIL	ms.draytek.com
<input type="checkbox"/>	2.		
<input type="checkbox"/>	3.		
<input type="checkbox"/>	4.		

### 3.10.3 Schedule

The Vigor router has a built-in real time clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

You have to set your time before set schedule. In **System Maintenance>> Time and Date** menu, press **Inquire Time** button to set the Vigor router's clock to current time of your PC. The clock will reset once if you power down or reset the router. There is another way to set up time. You can inquiry an NTP server (a time server) on the Internet to synchronize the router's clock. This method can only be applied when the WAN connection has been built up.

**Applications >> Schedule**

Schedule:		<a href="#">Set to Factory Default</a>	
Index	Status	Index	Status
<a href="#">1.</a>	x	<a href="#">9.</a>	x
<a href="#">2.</a>	x	<a href="#">10.</a>	x
<a href="#">3.</a>	x	<a href="#">11.</a>	x
<a href="#">4.</a>	x	<a href="#">12.</a>	x
<a href="#">5.</a>	x	<a href="#">13.</a>	x
<a href="#">6.</a>	x	<a href="#">14.</a>	x
<a href="#">7.</a>	x	<a href="#">15.</a>	x
<a href="#">8.</a>	x		

Status: v --- Active, x --- Inactive

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles and recover to factory settings.
<b>Index</b>	Click the number below Index to access into the setting page of schedule.
<b>Status</b>	Display if this schedule setting is active or inactive.

You can set up to 15 schedules. Then you can apply them to your **Internet Access** or **VPN and Remote Access >> LAN-to-LAN** settings.

To add a schedule, please click any index, say Index No. 1. The detailed settings of the call schedule with index 1 are shown below.

## Index No. 1

☒ Enable Schedule Setup

Start Date (yyyy-mm-dd) 2000-1-1

Start Time (hh:mm) 0:0

Duration Time (hh:mm) 0:0

Action Force On

Idle Timeout 0 minute(s). (max. 255, 0 for default)

How Often

☐ Once

☒ Weekdays

☐ Sun ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☐ Sat

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Enable Schedule Setup</b>	Check to enable the schedule.
<b>Start Date (yyyy-mm-dd)</b>	Specify the starting date of the schedule.
<b>Start Time (hh:mm)</b>	Specify the starting time of the schedule.
<b>Duration Time (hh:mm)</b>	Specify the duration (or period) for the schedule.
<b>Action</b>	<p>Specify which action Call Schedule should apply during the period of the schedule.</p> <p><b>Force On</b> -Force the connection to be always on.</p> <p><b>Force Down</b> -Force the connection to be always down.</p> <p><b>Enable Dial-On-Demand</b> -Specify the connection to be dial-on-demand and the value of idle timeout should be specified in <b>Idle Timeout</b> field.</p> <p><b>Disable Dial-On-Demand</b> -Specify the connection to be up when it has traffic on the line. Once there is no traffic over idle timeout, the connection will be down and never up again during the schedule.</p>
<b>Idle Timeout</b>	<p>Specify the duration (or period) for the schedule.</p> <p><b>How often</b> -Specify how often the schedule will be applied</p> <p><b>Once</b> -The schedule will be applied just once</p> <p><b>Weekdays</b> -Specify which days in one week should perform the schedule.</p>

### Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

Office

Hour:

(Force On)

Mon - Sun      9:00 am      to      6:00 pm

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

## 3.10.4 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Applications >> RADIUS

### RADIUS Setup

<input checked="" type="checkbox"/> Enable	
Server IP Address	<input type="text"/>
Destination Port	<input type="text" value="1812"/>
Shared Secret	<input type="text"/>
Confirm Shared Secret	<input type="text"/>

Available settings are explained as follows:

Item	Description
Enable	Check to enable RADIUS client feature.
Server IP Address	Enter the IP address of RADIUS server
Destination Port	The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.

<b>Shared Secret</b>	The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret.
<b>Confirm Shared Secret</b>	Re-type the Shared Secret for confirmation.

### 3.10.5 LDAP /Active Directory Setup

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform , inquire and modify the information within the directory, and acquire the data in the directory securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

#### General Setup

This page allows you to enable the function and specify general settings for LDAP server.

[Applications >> Active Directory /LDAP](#)

**Active Directory /LDAP**
[Set to Factory Default](#)

**General Setup**

**Active Directory / LDAP Profiles**

☒ Enable

Bind Type  
 Server Address  
 Destination Port  
☐ Use SSL  
  
 Regular DN  
 Regular Password

Simple Mode

389

OK

Cancel

**Note:** After finishing the configuration of the LDAP profiles, they will be listed in the page of [VPN and Remote Access >> PPP General Setup](#). If you want to use the profiles for VPN authentication, check the boxes under PPTP LDAP Profiles in [VPN and Remote Access >> PPP General Setup](#) first.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check to enable such function.
<b>Bind Type</b>	There are three types of bind type supported.

Vigor2850 Series User's Guide

234

**DrayTek**

	<div> Simple Mode ▾  Simple Mode  Anonymous  Regular Mode </div> <p><b>Simple Mode</b> – Just simply do the bind authentication without any search action.</p> <p><b>Anonymous</b> – Perform a search action first with Anonymous account then do the bind authentication.</p> <p><b>Regular Mode</b>– Mostly it is the same with anonymous mode. The different is that, the server will firstly check if you have the search authority.</p> <p>For the regular mode, you'll need to type in the <b>Regular DN</b> and <b>Regular Password</b>.</p>
<b>Server Address</b>	Enter the IP address of LDAP server.
<b>Destination Port</b>	Type a port number as the destination port for LDAP server.
<b>Use SSL</b>	Check the box to use the port number specified for SSL.
<b>Regular DN</b>	Type this setting if <b>Regular Mode</b> is selected as <b>Bind Type</b> .
<b>Regular Password</b>	Specify a password if <b>Regular Mode</b> is selected as <b>Bind Type</b> .

After finished the above settings, click **OK** button to save the settings.

## Profiles

You can configure eight AD/LDAP profiles. These profiles would be used with User Management for different purposes in management.

[Applications >> Active Directory /LDAP](#)

Active Directory /LDAP
| [Set to Factory Default](#)

General Setup

Active Directory / LDAP Profiles

Index	Name	Distinguished Name
<a href="#">1.</a>		
<a href="#">2.</a>		
<a href="#">3.</a>		
<a href="#">4.</a>		
<a href="#">5.</a>		
<a href="#">6.</a>		
<a href="#">7.</a>		
<a href="#">8.</a>		

**Note:** After finishing the configuration of the LDAP profiles, they will be listed in the page of [VPN and Remote Access >> PPP General Setup](#). If you want to use the profiles for VPN authentication, check the boxes under PPTP LDAP Profiles in [VPN and Remote Access >> PPP General Setup](#) first.

Click any index number link to open the following page.

## Index No. 1

Name	<input type="text"/>	
Common Name Identifier	<input type="text"/>	
Base Distinguished Name	<input type="text"/>	
Additional Filter	<input type="text"/>	
<p>Note: Please type in your additional filter for BaseDN search request.  For example,  1) For OpenLDAP: (gidNumber=500)  2) For AD: (msNPAllowDialin=TRUE)</p>		
Group Distinguished Name	<input type="text"/>	
<input type="button" value="OK"/> <input type="button" value="Cancel"/>		

Available settings are explained as follows:

Item	Description
<b>Name</b>	Type a name for such profile. The length of the use name is limited to 19 characters.
<b>Common Name Identifier</b>	Type or edit the common name identifier for the LDAP server. The common name identifier for most LDAP server is "cn".
<b>Base Distinguished Name / Group Distinguished Name</b>	Type or edit the distinguished name used to look up entries on the LDAP server.  Sometimes, you may forget the Distinguished Name since it's too long. Then you may click the  button to list all the account information on the AD/LDAP Server to assist you finish the setup.
<b>Additional Filter</b>	This is an optional setting.

After finished the above settings, click **OK** to save and exit this page. A new profile has been created.

### 3.10.6 UPnP

The **UPnP** (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router. It is more reliable than requiring a router to work out by itself which ports need to be opened. Further, the user does not have to manually set up port mappings or a DMZ. **UPnP is available on Windows XP** and the router provide the associated support for MSN Messenger to allow full use of the voice, video and messaging features.

Applications >> UPnP

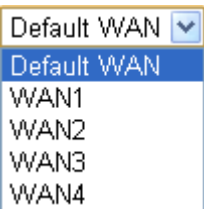

#### UPnP

<input checked="" type="checkbox"/> Enable UPnP Service	Default WAN ▾
<input type="checkbox"/> Enable Connection Control Service	
<input type="checkbox"/> Enable Connection Status Service	

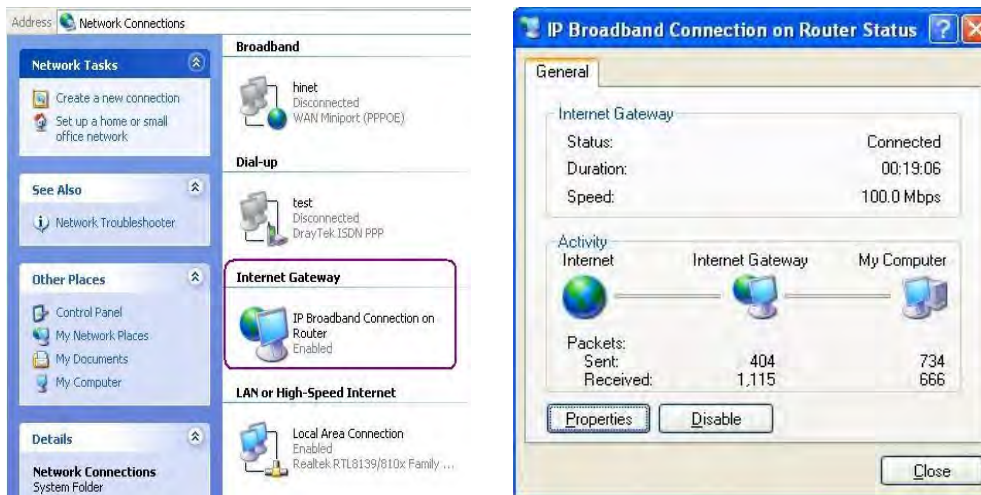

**Note:** To allow NAT pass-through to a UPnP-enabled client on the LAN, enable UPnP service above and ensure that the used connection service is also ticked.

OK Clear Cancel

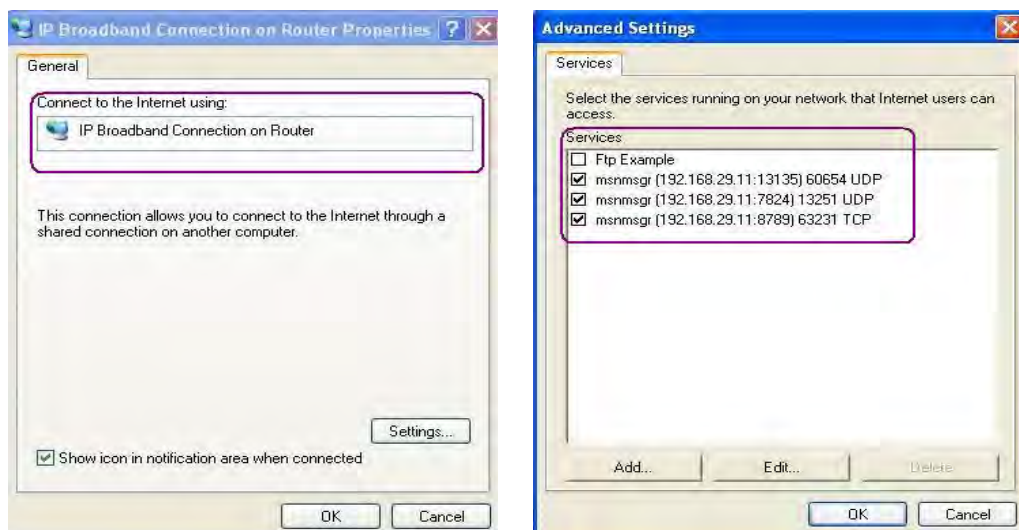

Available settings are explained as follows:

Item	Description
Enable UPNP Service	Accordingly, you can enable either the <b>Connection Control Service</b> or <b>Connection Status Service</b> .
Default WAN	It is used to specify the WAN interface for applying such function. 

After setting **Enable UPNP Service** setting, an icon of **IP Broadband Connection on Router** on Windows XP/Network Connections will appear. The connection status and control status will be able to be activated. The NAT Traversal of UPnP enables the multimedia features of your applications to operate. This has to manually set up port mappings or use other similar methods. The screenshots below show examples of this facility.

The UPnP facility on the router enables UPnP aware applications such as MSN Messenger to discover what are behind a NAT router. The application will also learn the external IP address and configure port mappings on the router. Subsequently, such a facility forwards packets from the external ports of the router to the internal ports used by the application.

The reminder as regards concern about Firewall and UPnP

### Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

### Security Considerations

Activating the UPnP function on your network may incur some security threats. You should consider carefully these risks before activating the UPnP function.

- Some Microsoft operating systems have found out the UPnP weaknesses and hence you need to ensure that you have applied the latest service packs and patches.
- Non-privileged users can control some router functions, including removing and adding port mappings.

The UPnP function dynamically adds port mappings on behalf of some UPnP-aware applications. When the applications terminate abnormally, these mappings may not be removed.

### 3.10.7 IGMP

IGMP is the abbreviation of *Internet Group Management Protocol*. It is a communication protocol which is mainly used for managing the membership of Internet Protocol multicast groups.

Applications >> IGMP

#### IGMP

☐ **Enable IGMP Proxy** WAN1 ▼  
IGMP Proxy is to act as a multicast proxy for hosts on the LAN side. Enable IGMP Proxy, if you will access any multicast group. But this function **take no affect when Bridge Mode is enabled**.  
☐ **Enable IGMP Snooping**  
Enable IGMP Snooping, multicast traffic is only forwarded to ports that have members of that group. Disable IGMP snooping, multicast traffic is treated in the same manner as broadcast traffic.

[Refresh](#)

Working Multicast Groups					
Index	Group ID	P1	P2	P3	P4

Available settings are explained as follows:

Item	Description
<b>Enable IGMP Proxy</b>	Check this box to enable this function. The application of multicast will be executed through WAN port. In addition, such function is available in NAT mode.
<b>Enable IGMP Snooping</b>	Check this box to enable this function. Multicast traffic will be forwarded to ports that have members of that group. Disabling IGMP snooping will make multicast traffic treated in the same manner as broadcast traffic.
<b>Refresh</b>	Click this link to renew the working multicast group status.
<b>Group ID</b>	This field displays the ID port for the multicast group. The available range for IGMP starts from 224.0.0.0 to 239.255.255.254.
<b>P1 to P4</b>	It indicates the LAN port used for the multicast group.

### 3.10.8 Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN (WOL)** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as “Enable” on the BIOS setting.

Application >> Wake on LAN

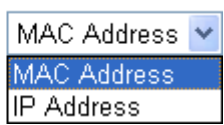

#### Wake on LAN

**Note:** Wake on LAN cooperate with **Bind IP to MAC** function, only binded PCs can wake up through IP.

Wake by:    
IP Address:   
MAC Address:  :  :  :  :  :

**Result**

Available settings are explained as follows:

Item	Description
Wake by	Two types provide for you to wake up the binded IP. If you choose Wake by MAC Address, you have to type the correct MAC address of the host in MAC Address boxes. If you choose Wake by IP Address, you have to choose the correct IP address.  Wake by: 
IP Address	The IP addresses that have been configured in <b>Firewall&gt;&gt;Bind IP to MAC</b> will be shown in this drop down list. Choose the IP address from the drop down list that you want to wake up.
MAC Address	Type any one of the MAC address of the bound PCs.
Wake Up	Click this button to wake up the selected IP. See the following figure. The result will be shown on the box.

## Wake on LAN

**Note:** Wake on LAN cooperate with [Bind IP to MAC](#) function, only binded PCs can wake up through IP.

Wake by: MAC Address ▼  
 IP Address: --- ▼  
 MAC Address: □ : □ : □ : □ : □ : □ Wake Up!

**Result**

Send command to client done.

### 3.10.9 SMS / Mail Alert Service

The function of SMS (Short Message Service)/Mail Alert is that Vigor router sends a message to user's mobile or e-mail box through specified service provider to assist the user knowing the real-time abnormal situations.

Vigor router allows you to set up to **10** SMS profiles which will be sent out according to different conditions.

#### SMS Provider

This page allows you to specify SMS provider, who will get the SMS, what the content is and when the SMS will be sent.

SMS Provider		Mail Server		Set to Factory Default	
Index	SMS Provider	Recipient	Notify Profile	Schedule(1-15)	
1 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
2 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
3 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
4 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
5 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
6 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
7 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
8 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
9 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>
10 <input type="checkbox"/>	1 - ??? <span>▼</span>	<input type="text"/>	1 - ??? <span>▼</span>	<input type="text"/>	<input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Index</b>	Check the box to enable such profile.
<b>SMS Provider</b>	Use the drop down list to choose SMS service provider. You can click <b>SMS Provider</b> link to define the SMS server.
<b>Recipient</b>	Type the name of the one who will receive the SMS.

<b>Notify</b>	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the <b>Notify Profile</b> link to define the content of the SMS.
<b>Schedule</b>	Type the schedule number that the SMS will be sent out. You can click the <b>Schedule(1-15)</b> link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

## Mail Server

This page allows you to specify Mail Server profile, who will get the notification e-mail, what the content is and when the message will be sent.

Application >> SMS / Mail Alert Service

SMS Provider		Mail Server		Set to Factory Default	
Index	Mail Service	Recipient	Notify Profile	Schedule(1-15)	
1 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
2 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
3 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
4 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
5 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
6 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
7 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
8 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
9 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		
10 <input type="checkbox"/>	1 - ??? ▾		1 - ??? ▾		

Available settings are explained as follows:

Item	Description
<b>Index</b>	Check the box to enable such profile.
<b>Mail Service</b>	Use the drop down list to choose mail service provider. You can click <b>Mail Service</b> link to define the mail server.
<b>Recipient</b>	Type the e-mail address of the one who will receive the notification message.
<b>Notify</b>	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the <b>Notify Profile</b> link to define the content of the mail message.
<b>Schedule</b>	Type the schedule number that the notification will be sent out. You can click the <b>Schedule(1-15)</b> link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

## 3.11 VPN and Remote Access

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

Below shows the menu items for VPN and Remote Access.

### 3.11.1 Remote Access Control

Enable the necessary VPN service as you need. If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port.

#### VPN and Remote Access >> Remote Access Control Setup

##### Remote Access Control Setup

<input checked="" type="checkbox"/>	Enable PPTP VPN Service
<input checked="" type="checkbox"/>	Enable IPSec VPN Service
<input checked="" type="checkbox"/>	Enable L2TP VPN Service
<input checked="" type="checkbox"/>	Enable SSL VPN Service
<input type="checkbox"/>	Enable ISDN Dial-In

**Note:** To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT [Open Ports](#) or [Port Redirection](#) is also configured.

OK Clear Cancel

### 3.11.2 PPP General Setup

This submenu only applies to PPP-related VPN connections, such as PPTP, L2TP, L2TP over IPSec.

VPN and Remote Access >> PPP General Setup

**PPP General Setup**  
**PPP/MP Protocol**  
Dial-In PPP Authentication PAP/CHAP/MS-CHAP/MS-CHAPv2  
Dial-In PPP Encryption(MPPE) Optional MPPE  
Mutual Authentication (PAP) ☐ Yes ☒ No  
Username   
Password   
**IP Address Assignment for Dial-In Users**  
(When DHCP Disable set)  
Assigned IP start  
LAN 1 192.168.1.200  
LAN 2 192.168.2.200  
LAN 3 192.168.3.200  
LAN 4 192.168.4.200

**LDAP Server Profiles for PPP Authentication**  
**PPTP LDAP Profile**  
Note: Please select 'PAP Only' in 'Dial-In PPP Authentication', if you want to use AD/LDAP for PPP Authentication!!

OK

Available settings are explained as follows:

Item	Description
<b>Dial-In PPP Authentication</b>	<p><b>PAP Only</b> - elect this option to force the router to authenticate dial-in users with the PAP protocol.</p> <p><b>PAP/CHAP/MS-CHAP/MS-CHAPv2</b> - Selecting this option means the router will attempt to authenticate dial-in users with the CHAP protocol first. If the dial-in user does not support this protocol, it will fall back to use the PAP protocol for authentication.</p>
<b>Dial-In PPP Encryption (MPPE)</b>	<p><b>Optional MPPE</b> - This option represents that the MPPE encryption method will be optionally employed in the router for the remote dial-in user. If the remote dial-in user does not support the MPPE encryption algorithm, the router will transmit “no MPPE encrypted packets”. Otherwise, the MPPE encryption scheme will be used to encrypt the data.</p> <div><div>Optional MPPE</div><div>Optional MPPE Require MPPE(40/128 bit) Maximum MPPE(128 bit)</div></div> <p><b>Require MPPE (40/128bits)</b> - Selecting this option will force the router to encrypt packets by using the MPPE encryption algorithm. In addition, the remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data.</p> <p><b>Maximum MPPE</b> - This option indicates that the router will use the MPPE encryption scheme with maximum bits (128-bit) to encrypt the data.</p>

<b>Mutual Authentication (PAP)</b>	The Mutual Authentication function is mainly used to communicate with other routers or clients who need bi-directional authentication in order to provide stronger security, for example, Cisco routers. So you should enable this function when your peer router requires mutual authentication. You should further specify the <b>User Name</b> and <b>Password</b> of the mutual authentication peer.
<b>Assigned IP Start</b>	Enter a start IP address for the dial-in PPP connection. You should choose an IP address from the local private network. For example, if the local private network is 192.168.1.0/255.255.255.0, you could choose 192.168.1.200 as the Start IP Address. You can configure up to four start IP addresses for LAN.
<b>LDAP Server Profiles for PPP Authentication</b>	Configured LDAP profiles will be listed under such item. Simply check the one you want to enable the PPP authentication by LDAP server profiles. However, if there is no profile listed, simply click the link of <b>PPTP LDAP Profile</b> to create/add some new LDAP profiles you want.

### 3.11.3 IPSec General Setup

In **IPSec General Setup**, there are two major parts of configuration.

There are two phases of IPSec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPSec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPSec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPSec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

Authentication Header (AH) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

Encapsulating Security Payload (ESP) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

**VPN IKE/IPsec General Setup**

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

<b>IKE Authentication Method</b>	
<b>Certificate for Dial-in</b>	None ▼
<b>Pre-Shared Key</b>	
Pre-Shared Key	<input type="text"/>
Confirm Pre-Shared Key	<input type="text"/>
<b>IPsec Security Method</b>	
<input checked="" type="checkbox"/> Medium (AH)	Data will be authentic, but will not be encrypted.
High (ESP)	<input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES
Data will be encrypted and authentic.	

Available settings are explained as follows:

Item	Description
<b>IKE Authentication Method</b>	<p>This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, <b>Certificate (X.509)</b> and <b>Pre-Shared Key</b>.</p> <p><b>Certificate for Dial-in</b> –Choose one of the local certificates from the drop down list.</p> <p><b>Pre-Shared Key</b>- Specify a key for IKE authentication.</p> <p><b>Confirm Pre-Shared Key</b>- Retype the characters to confirm the pre-shared key.</p> <p><b>Note:</b> Any packets from the remote dial-in user which does not match the rule defined in <b>VPN and Remote Access&gt;&gt;Remote Dial-In User</b> will be applied with the method specified here.</p>
<b>IPSec Security Method</b>	<p><b>Medium</b> - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p><b>High</b> - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 3.11.4 IPSec Peer Identity

To use digital certificate for peer authentication in either LAN-to-LAN connection or Remote User Dial-In connection, here you may edit a table of peer certificate for selection. As shown below, the router provides **32** entries of digital certificates for peer dial-in users.

VPN and Remote Access >> IPSec Peer Identity

X509 Peer ID Accounts:

[Set to Factory Default](#)

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Click it to clear all indexes.
<b>Index</b>	Click the number below Index to access into the setting page of IPSec Peer Identity.
<b>Name</b>	Display the profile name of that index.

Click each index to edit one peer digital certificate. There are three security levels of digital signature authentication: Fill each necessary field to authenticate the remote peer. The following explanation will guide you to fill all the necessary fields.

## Profile Index : 1

<b>Profile Name</b> <input type="text" value="one"/>	
<input checked="" type="checkbox"/> Enable this account	
<input type="radio"/> Accept Any Peer ID	
<input checked="" type="radio"/> Accept Subject Alternative Name	
Type	<input type="text" value="IP Address"/>
IP	<input type="text"/>
<input type="radio"/> Accept Subject Name	
Country (C)	<input type="text"/>
State (ST)	<input type="text"/>
Location (L)	<input type="text"/>
Organization (O)	<input type="text"/>
Organization Unit (OU)	<input type="text"/>
Common Name (CN)	<input type="text"/>
Email (E)	<input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type the name of the profile.
<b>Enable this account</b>	Check it to enable such account profile.
<b>Accept Any Peer ID</b>	Click to accept any peer regardless of its identity.
<b>Accept Subject Alternative Name</b>	Click to check one specific field of digital signature to accept the peer with matching value. The field can be <b>IP Address</b> , <b>Domain</b> , or <b>E-mail Address</b> . The box under the Type will appear according to the type you select and ask you to fill in corresponding setting.
<b>Accept Subject Name</b>	Click to check the specific fields of digital signature to accept the peer with matching value. The field includes <b>Country (C)</b> , <b>State (ST)</b> , <b>Location (L)</b> , <b>Organization (O)</b> , <b>Organization Unit (OU)</b> , <b>Common Name (CN)</b> , and <b>Email (E)</b> .

After finishing all the settings here, please click **OK** to save the configuration.

### 3.11.5 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection. You may set parameters including specified connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router provides 32 access accounts for dial-in users. Besides, you can extend the user accounts to the RADIUS server through the built-in RADIUS client function. The following figure shows the summary table.

VPN and Remote Access >> Remote Dial-in User

Remote Access User Accounts:				<a href="#">Set to Factory Default</a>			
Index	User	Active	Status	Index	User	Active	Status
<a href="#">1.</a>	???	<input type="checkbox"/>	---	<a href="#">17.</a>	???	<input type="checkbox"/>	---

Cancel

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Click to clear all indexes.
<b>Index</b>	Click the number below Index to access into the setting page of Remote Dial-in User.
<b>User</b>	Display the username for the specific dial-in user of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
<b>Active</b>	Check the box to activate such profile.
<b>Status</b>	Display the access state of the specific dial-in user. The symbol V and X represent the specific dial-in user to be active and inactive, respectively.

Click each index to edit one remote user profile. **Each Dial-In Type requires you to fill the different corresponding fields on the right.** If the fields gray out, it means you may leave it untouched. The following explanation will guide you to fill all the necessary fields.

## Index No. 11

<b>User account and Authentication</b> <input type="checkbox"/> Enable this account Idle Timeout <input type="text" value="300"/> second(s)		Username <input type="text" value="???"/> Password <input type="password"/> Authentication Type <input type="text" value="Local User Database"/>
<b>Allowed Dial-In Type</b> <input checked="" type="checkbox"/> ISDN <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> IPsec Tunnel <input checked="" type="checkbox"/> L2TP with IPsec Policy <input type="text" value="None"/>		<input type="checkbox"/> Enable Mobile One-Time Passwords(mOTP) PIN Code <input type="text"/> Secret <input type="password"/>
<input type="checkbox"/> Specify Remote Node Remote Client IP <input type="text"/> or Peer ID <input type="text"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block (for some IGMP,IP-Camera,DHCP Relay..etc.)		<b>IKE Authentication Method</b> <input checked="" type="checkbox"/> Pre-Shared Key IKE Pre-Shared Key <input type="text"/> <input type="checkbox"/> Digital Signature(X.509) <input type="text" value="None"/>
<b>Subnet</b> <input type="text" value="LAN 1"/> <input type="checkbox"/> Assign Static IP Address <input type="text" value="0.0.0.0"/>		<b>IPsec Security Method</b> <input checked="" type="checkbox"/> Medium(AH) High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES Local ID (optional) <input type="text"/>
		<b>Callback Function</b> <input type="checkbox"/> Check to enable Callback function <input type="checkbox"/> Specify the callback number Callback Number <input type="text"/> <input checked="" type="checkbox"/> Check to enable Callback Budget Control Callback Budget <input type="text" value="30"/> minute(s)

Available settings are explained as follows:

Item	Description
<b>User account and Authentication</b>	<p><b>Enable this account</b> - Check the box to enable this function.</p> <p><b>Idle Timeout</b>- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p>
<b>Allowed Dial-In Type</b>	<p><b>PPTP</b> - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p><b>IPsec Tunnel</b> - Allow the remote dial-in user to make an IPsec VPN connection through Internet.</p> <p><b>L2TP with IPsec Policy</b> - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below:</p> <ul style="list-style-type: none"> <li>● <b>None</b> - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection.</li> </ul>

	<ul style="list-style-type: none"> <li>● <b>Nice to Have</b> - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.</li> <li>● <b>Must</b> -Specify the IPSec policy to be definitely applied on the L2TP connection.</li> </ul> <p><b>Specify Remote Node</b> -You can specify the IP address of the remote dial-in user, ISDN number or peer ID (used in IKE aggressive mode).</p> <p>Uncheck the checkbox means the connection type you select above will apply the authentication methods and security methods in the <b>general settings</b>.</p> <p><b>Netbios Naming Packet</b> -</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.</li> <li>● <b>Block</b> – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.</li> </ul> <p><b>Multicast via VPN</b> - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click this button to let multicast packets pass through the router.</li> <li>● <b>Block</b> – This is default setting. Click this button to let multicast packets be blocked by the router.</li> </ul>
<b>Subnet</b>	<p>Chose one of the subnet selections for such VPN profile.</p> <p><b>Assign Static IP Address</b> – Allows you to specify certain IP address as a subnet.</p> <p><b>User Name</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>Enable Mobile One-Time Passwords (mOTP)</b> - Check this box to make the authentication with mOTP function.</p> <p><b>PIN Code</b> – Type the code for authentication (e.g, 1234).</p> <p><b>Secret</b> – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
<b>IKE Authentication Method</b>	<p>This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <p><b>Pre-Shared Key</b> - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p><b>Digital Signature (X.509)</b> – Check the box of Digital Signature to invoke this function and Select one predefined</p>

	Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b> .
<b>IPSec Security Method</b>	<p>This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p><b>Medium-Authentication Header (AH)</b> means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p><b>High-Encapsulating Security Payload (ESP)</b> means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p><b>Local ID</b> - Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>
<b>Callback Function</b>	<p>The callback function provides a callback service only for the <b>ISDN</b> LAN-to-LAN connection (this feature is useful for “i” model only). The remote user will be charged the connection fee by the telecom.</p> <p><b>Check to enable Callback function</b>-Enables the callback function.</p> <p><b>Specify the callback number</b> - The option is for extra security. Once enabled, the router will ONLY call back to the specified <b>Callback Number</b>.</p> <p><b>Check to enable Callback budget Control</b>- By default, the callback function has limitation of callback period. Once the callback budget is exhausted, the function will be disabled automatically.</p> <p><b>Callback Budget</b> - Specify the time budget for the dial-in user. The budget will be decreased automatically per callback connection. The default value 0 means no limitation of callback period.</p>

### 3.11.6 LAN to LAN

Here you can manage LAN-to-LAN connections by maintaining a table of connection profiles. You may set parameters including specified connection direction (dial-in or dial-out), connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router supports up to 32 VPN tunnels simultaneously. The following figure shows the summary table.

The following figure shows the summary table according to the item (All/Trunk) selected for View.

VPN and Remote Access >> LAN to LAN 

LAN-to-LAN Profiles: | [Set to Factory Default](#) |

<a href="#">16.</a>	???	<input type="checkbox"/>	---	<a href="#">32.</a>	???	<input type="checkbox"/>	---

Available settings are explained as follows:

Item	Description
<b>View</b>	<b>All</b> – Click it to display the LAN to LAN profiles. <b>Trunk</b> – Click it to display the Trunk profiles.
<b>Set to Factory Default</b>	Click to clear all indexes.
<b>Name</b>	Indicate the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
<b>Active</b>	V – means the profile has been enabled. X – means the profile has not been enabled.
<b>Status</b>	Indicate the status of individual profiles. The symbol V and X represent the profile to be active and inactive, respectively.

To edit each profile:

- Click each index to edit each profile and you will get the following page. Each LAN-to-LAN profile includes 4 subgroups. If the fields gray out, it means you may leave it untouched. The following explanations will guide you to fill all the necessary fields.

For the web page is too long, we divide the page into several sections for explanation.

**VPN and Remote Access >> LAN to LAN**

**Profile Index : 1**

**1. Common Settings**

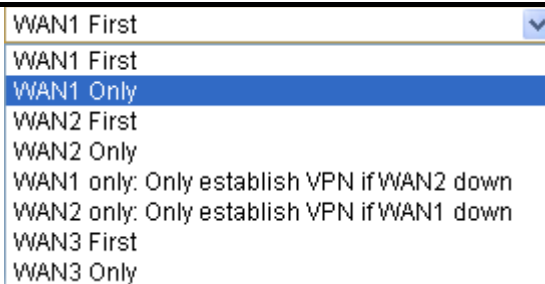

Profile Name <input type="text" value="???"/> <input type="checkbox"/> Enable this profile VPN Dial-Out Through <input type="text" value="WAN1 First"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block Multicast via VPN <input type="radio"/> Pass <input checked="" type="radio"/> Block (for some IGMP,IP-Camera,DHCP Relay..etc.)	Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in <input type="checkbox"/> Always on Idle Timeout <input type="text" value="300"/> second(s) <input type="checkbox"/> Enable PING to keep alive PING to the IP <input type="text"/>
--	---

**2. Dial-Out Settings**

<b>Type of Server I am calling</b> <input type="radio"/> PPTP <input type="radio"/> IPsec Tunnel <input type="radio"/> L2TP with IPsec Policy <input type="text" value="None"/>	Username <input type="text" value="???"/> Password(Max 15 char) <input type="text"/> PPP Authentication <input type="text" value="PAP/CHAP/MS-CHAP/MS-CHAPv2"/> VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off <b>IKE Authentication Method</b> <input checked="" type="radio"/> Pre-Shared Key IKE Pre-Shared Key <input type="text"/> <input type="radio"/> Digital Signature(X.509) Peer ID <input type="text" value="None"/> Local ID <input checked="" type="radio"/> Alternative Subject Name First <input type="radio"/> Subject Name First Local Certificate <input type="text" value="None"/> <b>IPsec Security Method</b> <input checked="" type="radio"/> Medium(AH) <input type="radio"/> High(ESP) <input type="text" value="DES without Authentication"/> <input type="button" value="Advanced"/> Index(1-15) in <b>Schedule</b> Setup: <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>
--	--

Available settings are explained as follows:

Item	Description
<b>Common Settings</b>	<p><b>Profile Name</b> – Specify a name for the profile of the LAN-to-LAN connection.</p> <p><b>Enable this profile</b> - Check here to activate this profile.</p> <p><b>VPN Dial-Out Through</b> - Use the drop down menu to choose a proper WAN interface for this profile. This setting is useful for dial-out only.</p>

- **WAN1 First/ WAN2 First/ WAN3 First** - While connecting, the router will use WAN1/WAN2/WAN3 as the first channel for VPN connection. If WAN1/WAN2/WAN3 fails, the router will use another WAN interface instead.
- **WAN1 Only /WAN2 Only/WAN 3 Only** - While connecting, the router will use WAN1/WAN2/WAN3 as the only channel for VPN connection.
- **WAN1 Only: Only establish VPN if WAN2 down** - If WAN2 failed, the router will use WAN1 for VPN connection.
- **WAN2 Only: Only establish VPN if WAN1 down** - If WAN1 failed, the router will use WAN2 for VPN connection.

#### Netbios Naming Packet

- **Pass** – click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
- **Block** – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.

**Multicast via VPN** - Some programs might send multicast packets via VPN connection.

- **Pass** – Click this button to let multicast packets pass through the router.
- **Block** – This is default setting. Click this button to let multicast packets be blocked by the router.

**Call Direction** - Specify the allowed call direction of this LAN-to-LAN profile.

- **Both**-initiator/responder
- **Dial-Out**- initiator only
- **Dial-In**- responder only.

**Always On**-Check to enable router always keep VPN connection.

**Idle Timeout**: The default value is 300 seconds. If the connection has been idled over the value, the router will drop the connection.

**Enable PING to keep alive** - This function is to help the router to determine the status of IPSec VPN connection, especially useful in the case of abnormal VPN IPSec tunnel disruption. For details, please refer to the note below.

	<p>Check to enable the transmission of PING packets to a specified IP address.</p> <p><b>Enable PING to keep alive</b> is used to handle abnormal IPSec VPN connection disruption. It will help to provide the state of a VPN connection for router's judgment of redial. Normally, if any one of VPN peers wants to disconnect the connection, it should follow a serial of packet exchange procedure to inform each other. However, if the remote peer disconnect without notice, Vigor router will by no where to know this situation. To resolve this dilemma, by continuously sending PING packets to the remote host, the Vigor router can know the true existence of this VPN connection and react accordingly. This is independent of DPD (dead peer detection).</p> <p><b>PING to the IP</b> - Enter the IP address of the remote host that located at the other-end of the VPN tunnel.</p>
<b>Dial-Out Settings</b>	<p><b>Type of Server I am calling - PPTP</b> - Build a PPTP VPN connection to the server through the Internet. You should set the identity like User Name and Password below for the authentication of remote server.</p> <p><b>IPSec Tunnel</b> - Build an IPSec VPN connection to the server through Internet.</p> <p><b>L2TP with IPSec Policy</b> - Build a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p> <ul style="list-style-type: none"> <li>● <b>None:</b> Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>● <b>Nice to Have:</b> Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-out VPN connection becomes one pure L2TP connection.</li> </ul> <p><b>Must:</b> Specify the IPSec policy to be definitely applied on the L2TP connection.</p> <p><b>User Name</b> - This field is applicable when you select, PPTP or L2TP with or without IPSec policy above.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>PPP Authentication</b> - This field is applicable when you select, PPTP or L2TP with or without IPSec policy above. PAP/CHAP is the most common selection due to wild compatibility.</p> <p><b>VJ compression</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. VJ Compression is used for TCP/IP protocol header compression. Normally set to <b>Yes</b> to improve bandwidth utilization.</p> <p><b>IKE Authentication Method</b> - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy.</p> <ul style="list-style-type: none"> <li>● <b>Pre-Shared Key</b> - Input 1-63 characters as pre-shared key.</li> </ul>

- **Digital Signature (X.509)** - Select one predefined Profiles set in the **VPN and Remote Access >>IPSec Peer Identity**.

**IPSec Security Method** - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy.

- **Medium AH (Authentication Header)** means data will be authenticated, but not be encrypted. By default, this option is active.
- **High (ESP-Encapsulating Security Payload)**- means payload (data) will be encrypted and authenticated. Select from below:
- **DES without Authentication** -Use DES encryption algorithm and not apply any authentication scheme.
- **DES with Authentication**-Use DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
- **3DES without Authentication**-Use triple DES encryption algorithm and not apply any authentication scheme.
- **3DES with Authentication**-Use triple DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
- **AES without Authentication**-Use AES encryption algorithm and not apply any authentication scheme.
- **AES with Authentication**-Use AES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.

**Advanced** - Specify mode, proposal and key life of each IKE phase, Gateway, etc.

The window of advance setup is shown as below:

**IKE phase 1 mode** -Select from **Main** mode and **Aggressive** mode. The ultimate outcome is to exchange security proposals to create a protected secure channel. **Main** mode is more secure than **Aggressive** mode since more exchanges are done in a secure channel to set up the IPSec session. However, the **Aggressive** mode is faster. The default value in Vigor router is Main mode.

- **IKE phase 1 proposal**-To propose the local available authentication schemes and encryption algorithms to the VPN peers, and get its feedback to find a match. Two combinations are available for Aggressive mode and nine for **Main** mode. We suggest you select the combination that covers the most schemes.
- **IKE phase 2 proposal**-To propose the local available

	<p>algorithms to the VPN peers, and get its feedback to find a match. Three combinations are available for both modes. We suggest you select the combination that covers the most algorithms.</p> <ul style="list-style-type: none"> <li>● <b>IKE phase 1 key lifetime</b>-For security reason, the lifetime of key should be defined. The default value is 28800 seconds. You may specify a value in between 900 and 86400 seconds.</li> <li>● <b>IKE phase 2 key lifetime</b>-For security reason, the lifetime of key should be defined. The default value is 3600 seconds. You may specify a value in between 600 and 86400 seconds.</li> <li>● <b>Perfect Forward Secret (PFS)</b>-The IKE Phase 1 key will be reused to avoid the computation complexity in phase 2. The default value is inactive this function.</li> </ul> <p><b>Local ID</b>-In <b>Aggressive</b> mode, Local ID is on behalf of the IP address while identity authenticating with remote VPN server. The length of the ID is limited to 47 characters.</p> <p><b>Callback Function (CBCP) - (for s models only)</b> The callback function provides a callback service as a part of PPP suite only for the ISDN dial-in user. The router owner will be charged the connection fee by the telecom.</p> <p><b>Require Remote to Callback</b>-Enable this to let the router to require the remote peer to callback for the connection afterwards.</p> <p><b>Provide ISDN Number to Remote</b>-In the case that the remote peer requires the Vigor router to callback, the local ISDN number will be provided to the remote peer. Check here to allow the Vigor</p>

---	---

Available settings are explained as follows:

Item	Description
<b>Dial-In Settings</b>	<p><b>Allowed Dial-In Type</b> - Determine the dial-in connection with different types.</p> <ul style="list-style-type: none"> <li>● <b>PPTP</b> - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</li> <li>● <b>IPSec Tunnel</b>- Allow the remote dial-in user to trigger an IPSec VPN connection through Internet.</li> <li>● <b>L2TP with IPSec Policy</b> - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:           <ul style="list-style-type: none"> <li>■ <b>None</b> - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>■ <b>Nice to Have</b> - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.</li> <li>■ <b>Must</b> - Specify the IPSec policy to be definitely</li> </ul> </li> </ul>

	<p>applied on the L2TP connection.</p> <p><b>Specify Remote VPN Gateway</b> - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.</p> <p>If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p><b>User Name</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>VJ Compression</b> - VJ Compression is used for TCP/IP protocol header compression. This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>IKE Authentication Method</b> - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <ul style="list-style-type: none"> <li>● <b>Pre-Shared Key</b> - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</li> <li>● <b>Digital Signature (X.509)</b> - Check the box of Digital Signature to invoke this function and select one predefined Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b>. <ul style="list-style-type: none"> <li>■ <b>Local ID</b> - Specify which one will be inspected first.</li> <li>■ <b>Alternative Subject Name First</b> - The alternative subject name (configured in <b>Certificate Management&gt;&gt;Local Certificate</b>) will be inspected first.</li> <li>■ <b>Subject Name First</b> - The subject name (configured in <b>Certificate Management&gt;&gt;Local Certificate</b>) will be inspected first.</li> </ul> </li> </ul> <p><b>IPSec Security Method</b> - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node.</p> <ul style="list-style-type: none"> <li>● <b>Medium-</b> Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</li> <li>● <b>High-</b> Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</li> </ul>
--	---

	<p>The callback function provides a callback service only for the <b>ISDN</b> LAN-to-LAN connection (this feature is useful for “i” model only). The remote user will be charged the connection fee by the telecom.</p> <p><b>Enable Callback Function</b>-Enables the callback function.</p> <p><b>Use the Following Number to Callback</b>- Check it to use the following parameters for Callback Function.</p> <p><b>Callback Number</b> - The option is for extra security. Once enabled, the router will <b>ONLY</b> call back to the specified Callback Number.</p> <p><b>Callback Budget</b> - Specify the time budget for the dial-in user. The budget will be decreased automatically per callback connection. The default value 0 means no limitation of callback period.</p>
<b>GRE over IPSec Settings</b>	<p><b>Enable IPSec Dial-Out function GRE over IPSec</b>: Check this box to verify data and transmit data in encryption with GRE over IPSec packet after configuring IPSec Dial-Out setting. Both ends must match for each other by setting same virtual IP address for communication.</p> <p><b>Logical Traffic</b>: Such technique comes from RFC2890. Define logical traffic for data transmission between both sides of VPN tunnel by using the characteristic of GRE. Even hacker can decipher IPSec encryption, he/she still cannot ask LAN site to do data transmission with any information. Such function can ensure the data transmitted on VPN tunnel is really sent out from both sides. This is an optional function. However, if one side wants to use it, the peer must enable it, too.</p> <p><b>My GRE IP</b>: Type the virtual IP for router itself for verified by peer.</p> <p><b>Peer GRE IP</b>: Type the virtual IP of peer host for verified by router.</p>
<b>TCP/IP Network Settings</b>	<p><b>My WAN IP</b> –This field is only applicable when you select PPTP or L2TP with or without IPSec policy above. The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p><b>Remote Gateway IP</b> - This field is only applicable when you select PPTP or L2TP with or without IPSec policy above. The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p><b>Remote Network IP/ Remote Network Mask</b> - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the</p>

VPN connection. For IPSec, this is the destination clients IDs of phase 2 quick mode.

**Local Network IP / Local Network Mask** - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required.

**More** - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.

**RIP Direction** - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.

**From first subnet to remote network, you have to do** - If the remote network only allows you to dial in with single IP, please choose **NAT**, otherwise choose **Route**.

**Change default route to this VPN tunnel** - Check this box to change the default route with this VPN tunnel.

2. After finishing all the settings here, please click **OK** to save the configuration.

### 3.11.7 VPN TRUNK Management

VPN trunk includes four features - VPN Backup, VPN load balance, GRE over IPSec, and Binding tunnel policy.

#### Features of VPN TRUNK – VPN Backup Mechanism

VPN TRUNK Management is a backup mechanism which can set multiple VPN tunnels as backup tunnel. It can assure the network connection not to be cut off due to network environment blocked by any reason.

- VPN TRUNK-VPN Backup mechanism can judge abnormal situation for the environment of VPN server and correct it to complete the backup of VPN Tunnel in real-time.
- VPN TRUNK-VPN Backup mechanism is compliant with all WAN modes (single/multi)
- Dial-out connection types contain IPSec, PPTP, L2TP, L2TP over IPSec and ISDN (depends on hardware specification)
- The web page is simple to understand and easy to configure

- Fully compliant with VPN Server LAN Sit Single/Multi Network
- Mail Alert support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Syslog support, please refer to **System Maintenance >> SysLog / Mail Alert** for detailed configuration
- Specific ERD (Environment Recovery Detection) mechanism which can be operated by using Telnet command

VPN TRUNK-VPN Backup mechanism profile will be activated when initial connection of single VPN tunnel is off-line. Before setting VPN TRUNK -VPN Backup mechanism backup profile, please configure at least two sets of LAN-to-LAN profiles (with fully configured dial-out settings) first, otherwise you will not have selections for grouping Member1 and Member2.

### **Features of VPN TRUNK – VPN Load Balance Mechanism**

VPN Load Balance Mechanism can set multiple VPN tunnels for using as traffic load balance tunnel. It can assist users to do effective load sharing for multiple VPN tunnels according to real line bandwidth. Moreover, it offers three types of algorithms for load balancing and binding tunnel policy mechanism to let the administrator manage the network more flexibly.

- Three types of load sharing algorithm offered, Round Robin, Weighted Round Robin and Fastest
- Binding Tunnel Policy mechanism allows users to encrypt the data in transmission or specified service function in transmission and define specified VPN Tunnel for having effective bandwidth management
- Dial-out connection types contain IPSec, PPTP, L2TP, L2TP over IPSec and GRE over IPSec
- The web page is simple to understand and easy to configure
- The TCP Session transmitted by using VPN TRUNK-VPN Load Balance mechanism will not be lost due to one of VPN Tunnels disconnected. Users do not need to reconnect with setting TCP/UDP Service Port again. The VPN Load Balance function can keep the transmission for internal data on tunnel stably

Available settings are explained as follows:

Item	Description
<b>Backup Profile List</b>	<p><b>Set to Factory Default</b> - Click to clear all VPN TRUNK-VPN Backup mechanism profile.</p> <p><b>No</b> – The order of VPN TRUNK-VPN Backup mechanism profile.</p> <p><b>Status</b> - “v” means such profile is enabled; “x” means such profile is disabled.</p> <p><b>Name</b> - Display the name of VPN TRUNK-VPN Backup mechanism profile.</p> <p><b>Member1</b> - Display the dial-out profile selected from the Member1 drop down list below.</p> <p><b>Active</b> - “Yes” means normal condition. ”No” means the state might be disabled or that profile currently is set with Dial-in mode (for call direction) in LAN-to-LAN.</p> <p><b>Type</b> - Display the connection type for that profile, such as</p>

	<p>IPSec, PPTP, L2TP, L2TP over IPSec (NICE), L2TP over IPSec(MUST) and so on.</p> <p><b>Member2</b> - Display the dial-out profile selected from the Member2 drop down list below.</p> <p><b>Advanced</b> – This button is available only when LAN to LAN profile (or more) is created.</p>  <p>Detailed information for this dialog, see later section - <b>Advanced Load Balance and Backup</b>.</p>
<p><b>Load Balance Profile List</b></p>	<p><b>Set to Factory Default</b> - Click to clear all VPN TRUNK-VPN Load Balance mechanism profile.</p> <p><b>No</b> - The order of VPN TRUNK-VPN Load Balance mechanism profile.</p> <p><b>Status</b> - “v” means such profile is enabled; ”x” means such profile is disabled.</p> <p><b>Name</b> - Display the name of VPN TRUNK-VPN Load Balance mechanism profile.</p> <p><b>Member1</b> - Display the dial-out profile selected from the Member1 drop down list below.</p> <p><b>Active</b> - “Yes” means normal condition. ”No” means the state might be disabled or that profile currently is set with Dial-in mode (for call direction) in LAN-to-LAN.</p> <p><b>Type</b> - Display the connection type for that profile, such as IPSec, PPTP, L2TP, L2TP over IPSec (NICE), L2TP over IPSec(MUST) and so on.</p> <p><b>Member2</b> - Display the dial-out profile selected from the Member2 drop down list below.</p> <p><b>Advanced</b> – This button is only available when there is one or more profiles created in this page.</p>

Detailed information for this dialog, see later section - **Advanced Load Balance and Backup.**

## General Setup

**Status-** After choosing one of the profile listed above, please click **Enable** to activate this profile. If you click **Disable**, the selected or current used VPN TRUNK-Backup/Load Balance mechanism profile will not have any effect for VPN tunnel.

**Profile Name-** Type a name for VPN TRUNK profile. Each profile can group two VPN connections set in LAN-to-LAN. The saved VPN profiles in LAN-to-LAN will be shown on Member1 and Member2 fields.

**Member 1/Member2** - Display the selection for LAN-to-LAN dial-out profiles (configured in **VPN and Remote Access >> LAN-to-LAN**) for you to choose for grouping under certain VPN TRUNK-VPN Backup/Load Balance mechanism profile.

- **No** - Index number of LAN-to-LAN dial-out profile.
- **Name** - Profile name of LAN-to-LAN dial-out profile.
- **Connection Type** - Connection type of LAN-to-LAN dial-out profile.
- **VPN ServerIP (Private Network)** - VPN Server IP of LAN-to-LAN dial-out profiles.

**Active Mode** - Display available mode for you to choose. Choose **Backup** or **Load Balance** for your router.

**Add** - Add and save new profile to the backup profile list. The corresponding members (LAN-to-LAN profiles) grouped in such new VPN TRUNK – VPN Backup mechanism profile will be locked. The profiles in LAN-to-LAN will be displayed in red. VPN TRUNK – VPN Load Balance mechanism profile will be locked. The profiles in LAN-to-LAN will be displayed in blue.

**Edit** - Click this button to save the changes to the **Status**

	(Enable or Disable), profile name, member1 or member2. <b>Delete</b> - Click this button to delete the selected VPN TRUNK profile. The corresponding members (LAN-to-LAN profiles) grouped in the deleted VPN TRUNK profile will be released and that profiles in LAN-to-LAN will be displayed in black.
--	---

### Time for activating VPN TRUNK – VPN Backup mechanism profile

VPN TRUNK – VPN Backup mechanism will be activated automatically after the initial connection of single VPN Tunnel off-line. The content in Member1/2 within VPN TRUNK – VPN Backup mechanism backup profile is similar to dial-out profile configured in LAN-to-LAN web page. VPN TRUNK – VPN Backup mechanism backup profile will process and handle everything unless it is off-line once it is activated.

### Time for activating VPN TRUNK – VPN Load Balance mechanism profile

After finishing the connection for one tunnel, the other tunnel will dial out automatically within two seconds. Therefore, you can choose any one of members under VPN Load Balance for dialing out.

### Time for activating VPN TRUNK –Dial-out when VPN Load Balance Disconnected

For there is one Tunnel created and connected successfully, to keep the load balance effect between two tunnels, auto-dial will be executed within two seconds.

To close two tunnels of load balance after connecting, please click **Disable** for **Status** in **General Setup** field.

### How can you set a VPN TRUNK-VPN Backup/Load Balance mechanism profile?

1. First of all, go to **VPN and Remote Access>>LAN-to-LAN**. Set two or more LAN-to-LAN profiles first that will be used for Member1 and Member2. If you do not set enough LAN-to-LAN profiles, you cannot operate VPN TRUNK – VPN Backup /Load Balance mechanism profile management well.
2. Access into **VPN and Remote Access>>VPN TRUNK Management**.
3. Set one group of VPN TRUNK – VPN Backup/Load Balance mechanism backup profile by choosing **Enable** radio button; type a name for such profile (e.g., 071023); choose one of the LAN-to-LAN profiles from Member1 drop down list; choose one of the LAN-to-LAN profiles from Member2 drop down list; and click **Add** at last.

No.	<Name>	<Connection-Type>	<VPN ServerIP(Private Network)>
1	To-A PlaceIPSec		192.168.2.25(20.20.20.0)
2	To-B Site IPSec		192.168.2.26(20.20.21.0)

4. Take a look for LAN-to-LAN profiles. Index 1 is chosen as Member1; index 2 is chosen as Member2. For such reason, LAN-to-LAN profiles of 1 and 2 will be expressed in red to indicate that they are fixed. If you delete the VPN TRUNK – VPN Backup/Load

Balance mechanism profile, the selected LAN-to-LAN profiles will be released and expressed in black.

**VPN and Remote Access >> LAN to LAN**

## Advanced Load Balance and Backup

After setting profiles for load balance, you can choose any one of them and click Advance for more detailed configuration. The windows for advanced load balance and backup are different. Refer to the following explanation:

### Advanced Load Balance

Available settings are explained as follows:

Item	Description
Profile Name	List the load balance profile name.
Load Balance Algorithm	<p><b>Round Robin</b> – Based on packet base, both tunnels will send the packet alternatively. Such method can reach the balance of packet transmission with fixed rate.</p> <p><b>Weighted Round Robin</b> –Such method can reach the balance of packet transmission with flexible rate. It can be divided into Auto Weighted and According to Speed Ratio. <b>Auto Weighted</b> can detect the device speed (10Mbps/100Mbps) and switch with fixed value ratio (3:7) for packet transmission. If the transmission rate for packets on both sides of the tunnels is the same, the value of Auto Weighted should be 5.5. <b>According to Speed Ratio</b> allows user to adjust suitable rate manually. There are 100 groups of rate ratio for Member1:Member2 (range from 1:99 to</p>

	99:1).
<b>VPN Load Balance Policy</b>	<p>Below shows the algorithm for Load Balance.</p> <p><b>Edit</b> – Click this radio button for assign a blank table for configuring Binding Tunnel.</p> <p><b>Insert after</b> – Click this radio button to adding a new binding tunnel table.</p> <p><b>Tunnel Bind Table Index</b>- 128 Binding tunnel tables are provided by this device. Specify the number of the tunnel for such Load Balance profile.</p> <p><b>Active</b> – In-active/Delete can delete this binding tunnel table. Active can activate this binding tunnel table.</p> <p><b>Binding Dial Out Index</b> – Specify connection type for transmission by choosing the index (LAN to LAN Profile Index) for such binding tunnel table.</p> <p><b>Scr IP Start /End</b>– Specify source IP addresses as starting point and ending point.</p> <p><b>Dest IP Start/End</b> – Specify destination IP addresses as starting point and ending point.</p> <p><b>Dest Port Start /End</b>– Specify destination service port as starting point and ending point.</p> <p><b>Protocol</b> – <b>Any</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here, such binding tunnel table can be established for TCP Service Port/UDP Service Port/ICMP/IGMP specified here.</p> <p><b>TCP</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and TCP Service Port also fits the number here, such binding tunnel table can be established. <b>UDP</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and UDP Service Port also fits the number here, such binding tunnel table can be established. <b>TCP/UPD</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and TCP/UDP Service Port also fits the number here, such binding tunnel table can be established. <b>ICMP</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and ICMP Service Port also fits the number here, such binding tunnel table can be established. <b>IGMP</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here and IGMP Service Port also fits the number here, such binding tunnel table can be established. <b>Other</b> means when the source IP, destination IP, destination port and fragment conditions match with the settings specified here with different TCP Service Port/UDP Service Port/ICMP/IGMP, such binding tunnel table can be established.</p>
<b>Detail Information</b>	This field will display detailed information for Binding Tunnel Policy. Below shows a successful binding tunnel

policy for load balance:

**VPN Load Balance - Binding Tunnel Policy**

☒ Create ☐ After insert

## 3.12 Certificate Management

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

Any entity wants to utilize digital certificates should first request a certificate issued by a CA server. It should also retrieve certificates of other trusted CA servers so it can authenticate the peer with certificates issued by those trusted CA servers.

Here you can manage generate and manage the local digital certificates, and set trusted CA certificates. Remember to adjust the time of Vigor router before using the certificate so that you can get the correct valid period of certificate.

Below shows the menu items for Certificate Management.

### 3.12.1 Local Certificate

Certificate Management >> Local Certificate

#### X509 Local Certificate Configuration

Name	Subject	Status	Modify	
---	---	---	<a href="#">View</a>	<a href="#">Delete</a>
---	---	---	<a href="#">View</a>	<a href="#">Delete</a>
---	---	---	<a href="#">View</a>	<a href="#">Delete</a>

[GENERATE](#) [IMPORT](#) [REFRESH](#)

Available settings are explained as follows:

Item	Description
<b>Generate</b>	Click this button to open <b>Generate Certificate Request</b> window. Type in all the information that the window requests. Then click <b>Generate</b> again.
<b>Import</b>	Click this button to import a saved file as the certification information.
<b>Refresh</b>	Click this button to refresh the information listed below.
<b>View</b>	Click this button to view the detailed settings for certificate request.
<b>Delete</b>	Click this button to delete selected name with certification information.

## GENERATE

Click this button to open **Generate Certificate Signing Request** window. Type in all the information that the window request such as certificate name (used for identifying different certificate), subject alternative name type and relational settings for subject name. Then click **GENERATE** again.

[Certificate Management >> Local Certificate](#)

### Generate Certificate Signing Request

<b>Certificate Name</b>	<input type="text"/>
<b>Subject Alternative Name</b>	
Type	IP Address <input type="button" value="v"/>
IP	<input type="text"/>
<b>Subject Name</b>	
Country (C)	<input type="text"/>
State (ST)	<input type="text"/>
Location (L)	<input type="text"/>
Organization (O)	<input type="text"/>
Organization Unit (OU)	<input type="text"/>
Common Name (CN)	<input type="text"/>
Email (E)	<input type="text"/>
<b>Key Type</b>	RSA <input type="button" value="v"/>
<b>Key Size</b>	1024 Bit <input type="button" value="v"/>

**Note:** Please be noted that “Common Name” must be configured with router’s WAN IP or domain name.

After clicking **Generate**, the generated information will be displayed on the window below:

**Certificate Management >> Local Certificate**

**X509 Local Certificate Configuration**

Name	Subject	Status	Modify	
server	/C=TW/ST=Hsinchu/L=Hsinchu/O...	Requesting	<a href="#">View</a>	<a href="#">Delete</a>
---	---	---	<a href="#">View</a>	<a href="#">Delete</a>
---	---	---	<a href="#">View</a>	<a href="#">Delete</a>

[GENERATE](#)

[IMPORT](#)

[REFRESH](#)

## IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as “Local Certificate”. If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

**Certificate Management >> Local Certificate**

**Import X509 Local Certificate**

**Upload Local Certificate**  
Select a local certificate file.  
Certificate file: [選擇檔案](#) 未選擇檔案  
Click [Import](#) to upload the local certificate.  
[Import](#) [Cancel](#)

**Upload PKCS12 Certificate**  
Select a PKCS12 file.  
PKCS12 file: [選擇檔案](#) 未選擇檔案  
Password:   
Click [Import](#) to upload the PKCS12 file.  
[Import](#) [Cancel](#)

**Upload Certificate and Private Key**  
Select a certificate file and a matchable Private Key.  
Certificate file: [選擇檔案](#) 未選擇檔案  
Key file: [選擇檔案](#) 未選擇檔案  
Password:   
Click [Import](#) to upload the local certificate and private key.  
[Import](#) [Cancel](#)

Available settings are explained as follows:

Item	Description
<b>Upload Local Certificate</b>	It allows users to import the certificate which is generated by vigor router and signed by CA server. If you have done well in certificate generation, the Status of the certificate will be shown as “OK”.

	<div><div>Import X509 Local Certificate</div><div><div>Congratulation!</div><div>Local Certificate has been imported successfully.</div><div>Please click <button>Back</button> to view the certificate.</div></div></div> <div><div>X509 Local Certificate Configuration</div><table><thead><tr><th>Name</th><th>Subject</th><th>Status</th><th colspan="2">Modify</th></tr></thead><tbody><tr><td>draytekdemo</td><td>/O=Draytek/OU=Draytek Sales/...</td><td>OK</td><td><button>View</button></td><td><button>Delete</button></td></tr><tr><td>---</td><td>---</td><td>---</td><td><button>View</button></td><td><button>Delete</button></td></tr><tr><td>---</td><td>---</td><td>---</td><td><button>View</button></td><td><button>Delete</button></td></tr></tbody></table><div><div>GENERATE</div><div>IMPORT</div><div>REFRESH</div></div></div>	Name	Subject	Status	Modify		draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	<button>View</button>	<button>Delete</button>	---	---	---	<button>View</button>	<button>Delete</button>	---	---	---	<button>View</button>	<button>Delete</button>
Name	Subject	Status	Modify																		
draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	<button>View</button>	<button>Delete</button>																	
---	---	---	<button>View</button>	<button>Delete</button>																	
---	---	---	<button>View</button>	<button>Delete</button>																	
Upload PKCS12 Certificate	<p>It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords.</p> <p><b>Note:</b> PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options.</p>																				
Upload Certificate and Private Key	<p>It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted.</p>																				

## REFRESH

Click this button to refresh the information listed below.

## View

Click this button to view the detailed settings for certificate request.

**Note:** You have to copy the certificate request information from above window. Next, access your CA server and enter the page of certificate request, copy the information into

it and submit a request. A new certificate will be issued to you by the CA server. You can save it.

## Delete

Click this button to remove the selected certificate.

### 3.12.2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate.

Certificate Management >> Trusted CA Certificate

#### X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify	
Trusted CA-1	---	---	<a href="#">View</a>	<a href="#">Delete</a>
Trusted CA-2	---	---	<a href="#">View</a>	<a href="#">Delete</a>
Trusted CA-3	---	---	<a href="#">View</a>	<a href="#">Delete</a>

[IMPORT](#)

[REFRESH](#)

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window. Use **Browse...** to find out the saved text file. Then click **Import**. The one you imported will be listed on the Trusted CA Certificate window. Then click **Import** to use the pre-saved file.

Certificate Management >> Trusted CA Certificate

#### Import X509 Trusted CA Certificate

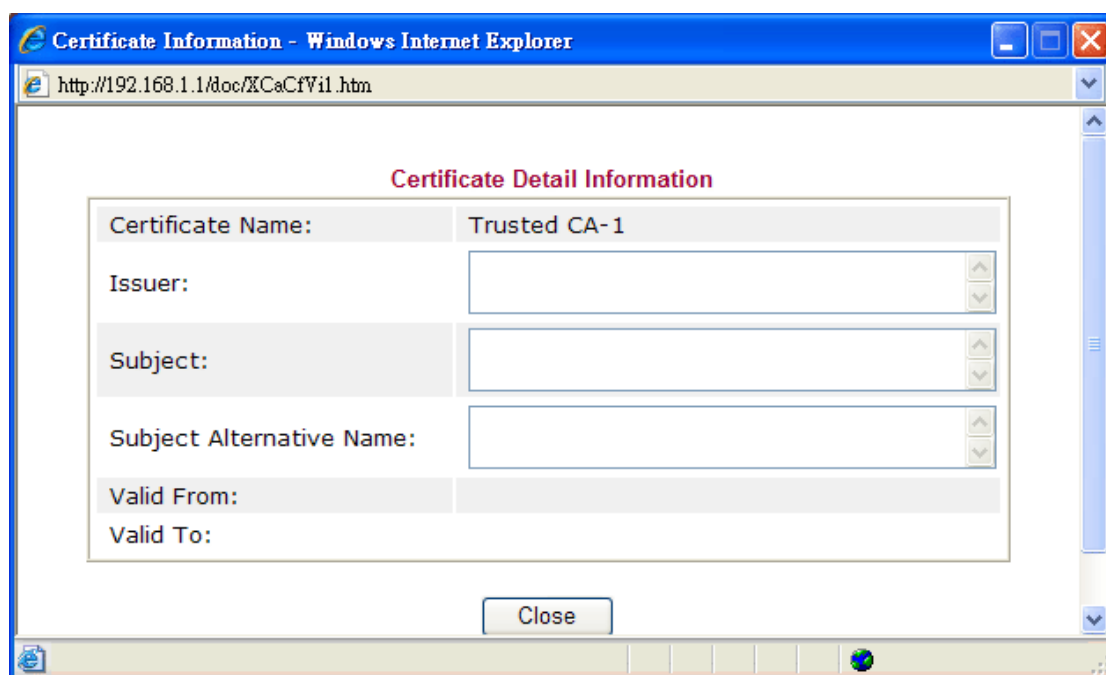

Select a trusted CA certificate file.

[Browse...](#)

Click [Import](#) to upload the certification.

[Import](#) [Cancel](#)

For viewing each trusted CA certificate, click **View** to open the certificate detail information window. If you want to delete a CA certificate, choose the one and click **Delete** to remove all the certificate information.

### 3.12.3 Certificate Backup

Local certificate and Trusted CA certificate for this router can be saved within one file. Please click **Backup** on the following screen to save them. If you want to set encryption password for these certificates, please type characters in both fields of **Encrypt password** and **Retype password**.

Also, you can use **Restore** to retrieve these two settings to the router whenever you want.

Certificate Management >> Certificate Backup

#### Certificate Backup / Restoration

##### Backup

Encrypt password:

Confirm password:

Click  to download certificates to your local PC as a file.

##### Restoration

Select a backup file to restore.

Decrypt password:

Click  to upload the file.

### 3.13 VoIP

**Note:** This function is used for “V” models.

Voice over IP network (VoIP) enables you to use your broadband Internet connection to make toll quality voice calls over the Internet.

There are many different call signaling protocols, methods by which VoIP devices can talk to each other. The most popular protocols are SIP, MGCP, Megaco and H.323. These protocols are not all compatible with each other (except via a soft-switch server).

The Vigor V models support the SIP protocol as this is an ideal and convenient deployment for the ITSP (Internet Telephony Service Provider) and softphone and is widely supported. SIP is an end-to-end, signaling protocol that establishes user presence and mobility in VoIP structure. Every one who wants to talk using his/her SIP Uniform Resource Identifier, “SIP Address”. The standard format of SIP URI is

**sip: user:password @ host: port**

Some fields may be optional in different use. In general, “host” refers to a domain. The “userinfo” includes the user field, the password field and the @ sign following them. This is very similar to a URL so some may call it “SIP URL”. SIP supports peer-to-peer direct calling and also calling via a SIP proxy server (a role similar to the gatekeeper in H.323 networks), while the MGCP protocol uses client-server architecture, the calling scenario being very similar to the current PSTN/ISDN network.

After a call is setup, the voice streams transmit via RTP (Real-Time Transport Protocol). Different codecs (methods to compress and encode the voice) can be embedded into RTP packets. Vigor V models provide various codecs, including G.711 A/μ-law, G.723, G.726 and G.729 A & B. Each codec uses a different bandwidth and hence provides different levels of voice quality. The more bandwidth a codec uses the better the voice quality, however the codec used must be appropriate for your Internet bandwidth.

Usually there will be two types of calling scenario, as illustrated below:

- **Calling via SIP Servers**

First, the Vigor V models of yours will have to register to a SIP Registrar by sending registration messages to validate. Then, both parties' SIP proxies will forward the sequence of messages to caller to establish the session.

If you both register to the same SIP Registrar, then it will be illustrated as below:

The major benefit of this mode is that you don't have to memorize your friend's IP address, which might change very frequently if it's dynamic. Instead of that, you will only have to use **dial plan** or directly dial your friend's **account name** if you are with the same SIP Registrar.

- **Peer-to-Peer**

Before calling, you have to know your friend's IP Address. The Vigor VoIP Routers will build connection between each other.

- Our Vigor V models firstly apply efficient codecs designed to make the best use of available bandwidth, but Vigor V models also equip with automatic QoS assurance. QoS Assurance assists to assign high priority to voice traffic via Internet. You will always have the required inbound and outbound bandwidth that is prioritized exclusively for Voice traffic over Internet but you just get your data a little slower and it is tolerable for data traffic.

### 3.13.1 DialPlan

This page allows you to set phone book and digit map for the VoIP function. Click the **Phone Book** and **Digit Map** links on the page to access into next pages for dialplan settings.

VoIP >> DialPlan Setup

#### DialPlan Configuration

<a href="#">Phone Book</a>
<a href="#">Digit Map</a>
<a href="#">Call Barring</a>
<a href="#">Regional</a>
<a href="#">PSTN Setup</a>

#### Secure Phone configuration

<input checked="" type="checkbox"/> Enable Secure Phone (ZRTP+SRTP)
<input checked="" type="checkbox"/> Enable SAS Voice Prompt

OK

Available settings are explained as follows:

Item	Description
Enable Secure Phone	It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.
Enable SAS Voice Prompt	If it is enabled, SAS prompt will be heard for both ends every time. If it is disabled, no SAS prompt will be heard any more.

### Application for Secure Phone

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** and **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will send SAS voice prompt to A and vigor router B will send the SAS voice prompt to B.
2. Then the RTP traffic is secured until the call ends.
3. If vigor router A wants to call vigor router B again next time, both A and B will not hear any voice prompt again even checking **Enable SAS Voice Prompt** on web UI. It means only the first call between them will have voice prompt.

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** but not **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will **NOT** send SAS voice prompt to vigor router A and vigor router B will NOT send the SAS voice prompt to vigor router B.
2. Even no voice prompt, but the RTP traffic is still secured until the call ends.

**Note:** If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

## Phone Book

In this section, you can set your VoIP contacts in the “phonebook”. It can help you to make calls quickly and easily by using “speed-dial” **Phone Number**. There are total 60 index entries in the phonebook for you to store all your friends and family members’ SIP addresses. **Loop through** and **Backup Phone Number** will be displayed if you are using Vigor2850Vn for setting the phone book.

VoIP >> DialPlan Setup

### Phone Book

Index	Phone number	Display Name	SIP URL	Dial Out Account	Loop through	Backup Phone Number	Secure Phone	Status
<a href="#">1.</a>				Default	None		None	x
<a href="#">2.</a>				Default	None		None	x
<a href="#">3.</a>				Default	None		None	x

Clear

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click this to enable this entry.
<b>Phone Number</b>	The speed-dial number of this index. This can be any number you choose, using digits <b>0-9</b> and <b>*</b> .

<b>Display Name</b>	The Caller-ID that you want to be displayed on your friend's screen. This let your friend can easily know who's calling without memorizing lots of SIP URL Address.
<b>SIP URL</b>	Enter your friend's SIP Address.
<b>Dial Out Account</b>	Choose one of the SIP accounts for this profile to dial out. It is useful for both sides (caller and callee) that registered to different SIP Registrar servers. If caller and callee do not use the same SIP server, sometimes, the VoIP phone call connection may not succeed. By using the specified dial out account, the successful connection can be assured.
<b>Loop through</b>	Choose PSTN to enable loop through function. 
<b>Backup Phone Number</b>	When the VoIP phone is obstructs or the Internet breaks down for some reasons, the backup phone will be dialed out to replace the VoIP phone number. At this time, the phone call will be changed from VoIP phone into PSTN call according to the loop through direction chosen. Note that, during the phone switch, the blare of phone will appear for a short time. And when the VoIP phone is switched into the PSTN phone, the telecom co. might charge you for the connection fee. Please type in backup phone number (PSTN number/ISDN number) for this VoIP phone setting.
<b>Secure Phone</b>	<b>ZRTP+SRTP</b> - It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.

**Note:** If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

## Digit Map

For the convenience of user, this page allows users to edit prefix number for the SIP account with adding number, stripping number or replacing number. It is used to help user having a quick and easy way to dial out through VoIP interface.

### VoIP >> DialPlan Setup

#### Digit Map Setup

#	Enable	Match Prefix	Mode	OP Number	Min Len	Max Len	Route	Move Up	Move Down
1	<input checked="" type="checkbox"/>	03	Replace	8863	7	8	PSTN		Down
2	<input checked="" type="checkbox"/>	886	Strip	886	9	10	PSTN	UP	Down
3	<input type="checkbox"/>		None		0	0	PSTN	UP	Down
4	<input type="checkbox"/>		None		0	0	PSTN	UP	Down
5	<input type="checkbox"/>		None		0	0	PSTN	UP	Down

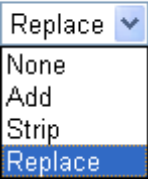

18	<input type="checkbox"/>		None		0	0	PSTN	UP	Down
19	<input type="checkbox"/>		None		0	0	PSTN	UP	Down
20	<input type="checkbox"/>		None		0	0	PSTN	UP	

**Note:**

1. The length for Min Len and Max Len fields should be between 0~25.
2. Wildcard '?' is supported.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to invoke this setting.
<b>Match Prefix</b>	It is used to match with the number you dialed and can be modified with the <b>OP Number</b> by the mode (add, strip or replace).
<b>Mode</b>	<p><b>None</b> - No action.</p> <p><b>Add</b> - When you choose this mode, the OP number will be added with the prefix number for calling out through the specific VoIP interface.</p> <p><b>Strip</b> - When you choose this mode, the OP number will be deleted by the prefix number for calling out through the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the OP number of 886 will be deleted completely for the prefix number is set with 886.</p> <p><b>Replace</b> - When you choose this mode, the OP number will be replaced by the prefix number for calling out through the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the prefix number of 03 will be replaced by 8863. For example: dial number of "031111111" will be changed to "8863111111" and sent to SIP server.</p> <p>Mode</p> 
<b>OP Number</b>	The front number you type here is the first part of the account number that you want to execute special function (according to the chosen mode) by using the prefix number.
<b>Min Len</b>	Set the minimal length of the dial number for applying the prefix number settings. Take the above picture (Prefix Table Setup web page) as an example, if the dial number is between 7 and 9, that number can apply the prefix number settings here.
<b>Max Len</b>	Set the maximum length of the dial number for applying the prefix number settings.
<b>Route</b>	Choose the one that you want to enable the prefix number

	settings from the saved SIP accounts. Please set up one SIP account first to make this interface available. This item will be changed according to the port settings configured in <b>VoIP&gt;&gt; Phone Settings</b> .
<b>Move UP /Move Down</b>	Click the link to move the selected entry up or down.

## Call Barring

Call barring is used to block phone calls coming from the one that is not welcomed.

[VoIP >> DialPlan Setup](#)

Call Barring Setup

Available settings are explained as follows:

Item	Description
<b>Enable Regional</b>	Check this box to enable this function.
<b>Last Call Return [Miss]</b>	Sometimes, people might miss some phone calls. Please dial number typed in this field to know where the last phone call comes from and call back to that one.
<b>Last Call Return [In]</b>	You have finished an incoming phone call, however you want to call back again for some reason. Please dial number typed in this field to call back to that one.

<b>Last Call Return [Out]</b>	Dial the number typed in this field to call the previous outgoing phone call again.
<b>Call Forward [All][Act]</b>	Dial the number typed in this field to forward all the incoming calls to the specified place.
<b>Call Forward [Deact]</b>	Dial the number typed in this field to release the call forward function.
<b>Call Forward [Busy][Act]</b>	Dial the number typed in this field to forward all the incoming calls to the specified place while the phone is busy.
<b>Call Forward [No Ans][Act]</b>	Dial the number typed in this field to forward all the incoming calls to the specified place while there is no answer of the connected phone.
<b>Do Not Disturb [Act]</b>	Dial the number typed in this field to invoke the function of DND.
<b>Do Not Distrub [Deact]</b>	Dial the number typed in this field to release the DND function.
<b>Hide caller ID [Act]</b>	Dial the number typed in this field to make your phone number (ID) not displayed on the display panel of remote end.
<b>Hide caller ID [Deact]</b>	Dial the number typed in this field to release this function.
<b>Call Waiting [Act]</b>	Dial the number typed in this field to make all the incoming calls waiting for your answer.
<b>Call Waiting [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Anonymous[Act]</b>	Dial the number typed in this field to block all the incoming calls with unknown ID.
<b>Block Anonymous[Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Unknown Domain [Act]</b>	Dial the number typed in this field to block all the incoming calls from unknown domain.
<b>Block Unknown Domain [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block IP Calls [Act]</b>	Dial the number typed in this filed to block all the incoming calls from IP address.
<b>Block IP Calls [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Last Calls [Act]</b>	Dial the number typed in this field to block the last incoming phone call.

## PSTN Setup

Some emergency phone (e.g., 911) or special phone cannot be dialed out by using VoIP and can be called out through PSTN line only. To solve this problem, this page allows you to set five sets of PSTN number for dialing without passing through Internet. Please type the number in the field of **phone number for PSTN relay**.

VoIP >> PSTN Setup

Default phone number for PSTN relay

Enable	phone number for PSTN relay
<input type="checkbox"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>

OK Cancel

Then, check the **Enable** box to make the PSTN number available for dial whenever you need.

### 3.13.2 SIP Accounts

In this section, you set up your own SIP settings. When you apply for an account, your SIP service provider will give you an **Account Name** or user name, **SIP Registrar**, **Proxy**, and **Domain name**. (The last three might be the same in some case). Then you can tell your folks your SIP Address as in **Account Name@ Domain name**

As Vigor VoIP Router is turned on, it will first register with Registrar using AuthorizationUser@Domain/Realm. After that, your call will be bypassed by SIP Proxy to the destination using AccountName@Domain/Realm as identity.

**Note:** Selection items for **Ring Port** will differ according to the router you have.

**SIP Accounts List** Refresh

Index	Profile	Domain/Realm	Proxy	Account Name	Codec	Ring Port	Status
<a href="#">1</a>				---	G.729A/B	<input type="checkbox"/> Phone1 <input type="checkbox"/> Phone2	-

R: success registered on SIP server  
-: fail to register on SIP server

**NAT Traversal Setting**

STUN Server:	<input type="text"/>
External IP:	<input type="text"/>
SIP PING Interval:	<input type="text" value="150"/> sec

Available settings are explained as follows:

Item	Description
<b>Index</b>	Click this link to access into next page for setting SIP account.
<b>Profile</b>	Display the profile name of the account.
<b>Domain/Realm</b>	Display the domain name or IP address of the SIP registrar server.
<b>Proxy</b>	Display the domain name or IP address of the SIP proxy server.
<b>Account Name</b>	Display the account name of SIP address before @.
<b>Codec</b>	Display the codec type for the account.
<b>Ring Port</b>	Specify which port will ring when receiving a phone call. Set Phone, ISDN1-S0 or ISDN-TE as the default ring port for the SIP account. If you choose Phone or ISDN1-S0, the ISDN2-TE selection will be dimmed, vice versa. There are ten internal lines with numbers (30 – 39) offered for <b>ISDN-S0</b> . You can specify any one of them as ring port for specified SIP account. By the way, ISDN-S0 can be used by mapping with MSN numbers.
<b>Status</b>	Show the status for the corresponding SIP account. <b>R</b> means such account is registered on SIP server successfully. – means the account is failed to register on SIP server.
<b>STUN Server</b>	Type in the IP address or domain of the STUN server.
<b>External IP</b>	Type in the gateway IP address.

<b>SIP PING interval</b>	The default value is 150 (sec). It is useful for a Nortel server NAT Traversal Support.
--------------------------	---

Click any index link to access into the following page for configuring SIP account.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Assign a name for this profile for identifying. You can type similar name with the domain. For example, if the domain name is <i>draytel.org</i> , then you might set <i>draytel-1</i> in this field.
<b>Register via</b>	If you want to make VoIP call without register personal information, please choose <b>None</b> and check the box to achieve the goal. Some SIP server allows user to use VoIP function without registering. For such server, please check the box of <b>Call without Registration</b> . Choosing <b>Auto</b> is recommended. The system will select a proper way for your VoIP call.

	
<b>SIP Port</b>	Set the port number for sending/receiving SIP message for building a session. The default value is <b>5060</b> . Your peer must set the same value in his/her Registrar.
<b>Domain/Realm</b>	Set the domain name or IP address of the SIP Registrar server.
<b>Proxy</b>	Set domain name or IP address of SIP proxy server. By the time you can type <b>:port number</b> after the domain name to specify that port as the destination of data transmission (e.g., <b>nat.draytel.org:5065</b> )
<b>Act as Outbound Proxy</b>	Check this box to make the proxy acting as outbound proxy.
<b>Display Name</b>	The caller-ID that you want to be displayed on your friend's screen.
<b>Account Number/Name</b>	Enter your account name of SIP Address, e.g. every text before @.
<b>Authentication ID</b>	Check the box to invoke this function and enter the name or number used for SIP Authorization with SIP Registrar. If this setting value is the same as Account Name, it is not necessary for you to check the box and set any value in this field.
<b>Password</b>	The password provided to you when you registered with a SIP service.
<b>Expiry Time</b>	The time duration that your SIP Registrar server keeps your registration record. Before the time expires, the router will send another register request to SIP Registrar again.
<b>NAT Traversal Support</b>	<p>If the router (e.g., broadband router) you use connects to internet by other device, you have to set this function for your necessity.</p> <p>NAT Traversal Support </p> <p><b>None</b> – Disable this function.</p> <p><b>Stun</b> – Choose this option if there is Stun server provided for your router.</p> <p><b>Manual</b> – Choose this option if you want to specify an external IP address as the NAT transversal support.</p> <p><b>Nortel</b> – If the soft-switch that you use supports Nortel</p>

	<p>solution, you can choose this option.</p>
<b>Call Forwarding</b>	<p>There are four options for you to choose. <b>Disable</b> is to close call forwarding function. <b>Always</b> means all the incoming calls will be forwarded into SIP URL without any reason. <b>Busy</b> means the incoming calls will be forwarded into SIP URL only when the local system is busy. <b>No Answer</b> means if the incoming calls do not receive any response, they will be forwarded to the SIP URL by the time out.</p>  <p><b>SIP URL</b> – Type in the SIP URL (e.g., aaa@draytel.org or abc@iptel.org) as the site for call forwarded.</p> <p><b>Time Out</b> – Set the time out for the call forwarding. The default setting is 30 sec.</p>
<b>Ring Port</b>	<p>Set Phone 1 and/or Phone 2 as the default ring port(s) for this SIP account.</p>
<b>Ring Pattern</b>	<p>Choose a ring tone type for the VoIP phone call.</p> <p>Ring Pattern </p>
<b>Prefer Codec</b>	<p>Select one of five codecs as the default for your VoIP calls. The codec used for each call will be negotiated with the peer party before each session, and so may not be your default choice. The default codec is G.729A/B; it occupies little bandwidth while maintaining good voice quality.</p> <p>If your upstream speed is only 64Kbps, do not use G.711 codec. It is better for you to have at least 256Kbps upstream if you would like to use G.711.</p> <p>Prefer Codec </p> <p><b>Single Codec</b> – If the box is checked, only the selected Codec will be applied.</p>
<b>Packet Size</b>	<p>The amount of data contained in a single packet. The default value is 20 ms, which means the data packet will contain 20 ms voice information.</p>

	Packet Size <div>           20ms ▾            10ms            20ms            30ms            40ms            50ms            60ms         </div>
<b>Voice Active Detector</b>	<p>This function can detect if the voice on both sides is active or not. If not, the router will do something to save the bandwidth for other using. Click On to invoke this function; click off to close the function.</p> <p>Voice Active Detector           <div>             Off ▾              Off              On           </div> </p>

### 3.13.3 Phone Settings

This page allows user to set phone settings for Phone 1 and Phone 2 respectively. However, it changes slightly according to different model you have.

#### VoIP >> Phone Settings

Index	Port	Call Feature	Tone	Gain (Mic/Speaker)	Default SIP Account	DTMF Relay
<u>1</u>	Phone1	CW,CT,	User Defined	5/5		OutBand
<u>2</u>	Phone2	CW,CT,	User Defined	5/5		OutBand

--	--

OK Cancel Advanced

Available settings are explained as follows:

Item	Description
<b>Hotline</b>	Check the box to enable it. Type in the SIP URL in the field for dialing automatically when you pick up the phone set.
<b>Session Timer</b>	Check the box to enable the function. In the limited time that you set in this field, if there is no response, the

	connecting call will be closed automatically.
<b>T.38 Fax Function</b>	Check the box to enable T.38 fax function. <b>Error Correction Mode</b> – choose a mode for error correction.
<b>DND (Do Not Disturb) mode</b>	Set a period of peace time without disturbing by VoIP phone call. During the period, the one who dial in will listen busy tone, yet the local user will not listen any ring tone. <b>Index (1-15) in Schedule</b> - Enter the index of schedule profiles to control when the phone will ring and when will not according to the preconfigured schedules. Refer to section <b>Application &gt;&gt;Schedule</b> for detailed configuration. <b>Index (1-60) in Phone Book</b> - Enter the index of phone book profiles. Refer to section <b>DialPlan – Phone Book</b> for detailed configuration.
<b>CLIR (hide caller ID)</b>	Check this box to hide the caller ID on the display panel of the phone set.
<b>Call Waiting</b>	Check this box to invoke this function. A notice sound will appear to tell the user new phone call is waiting for your response. Click hook flash to pick up the waiting phone call.
<b>Call Transfer</b>	Check this box to invoke this function. Click hook flash to initiate another phone call. When the phone call connection succeeds, hang up the phone. The other two sides can communicate, then.
<b>Default SIP Account</b>	You can set SIP accounts (up to six groups) on SIP Account page. Use the drop down list to choose one of the profile names for the accounts as the default one for this phone setting. <b>Play dial tone only when account registered</b> - Check this box to invoke the function.

In addition, you can press the **Advanced** button to configure tone settings, volume gain, MISC and DTMF mode. **Advanced** setting is provided for fitting the telecommunication custom for the local area of the router installed. Wrong tone settings might cause inconvenience for users. To set the sound pattern of the phone set, simply choose a proper region to let the system find out the preset tone settings and caller ID type automatically. Or you can adjust tone settings manually if you choose User Defined. TOn1, TOff1, TOn2 and TOff2 mean the cadence of the tone pattern. TOn1 and TOn2 represent sound-on; TOff1 and TOff2 represent the sound-off.

## Advance Settings &gt;&gt; Phone 1

Tone Settings		Caller ID Type: FSK_ETSI					
	Low Freq (Hz)	High Freq (Hz)	T on 1 (msec)	T off 1 (msec)	T on 2 (msec)	T off 2 (msec)	
Dial tone	350	440	0	0	0	0	
Ringing tone	400	450	400	200	400	2000	
Busy tone	400	0	375	375	0	0	
Congestion tone	0	0	0	0	0	0	

<b>Volume Gain</b>		<b>DTMF</b>	
Mic Gain(1-10)	5	DTMF Mode	InBand
Speaker Gain(1-10)	5	Payload Type (RFC2833) (96 - 127)	101

<b>MISC</b>

Ring Frequency (10 - 50HZ)	25

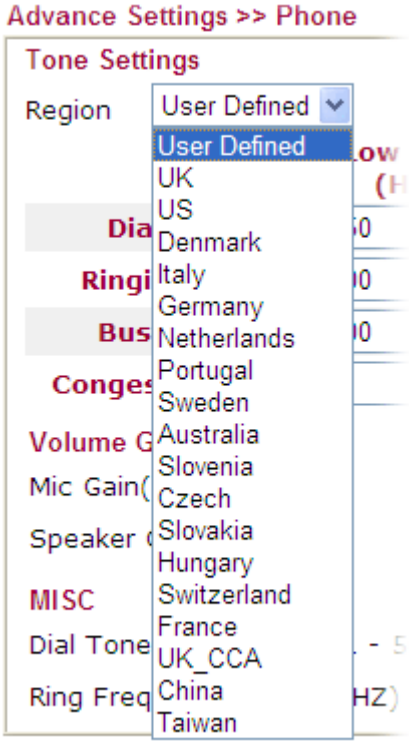

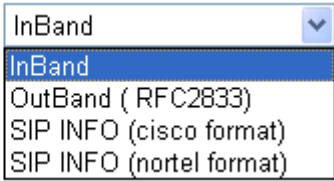

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Region</b>	Select the proper region which you are located. The common settings of <b>Caller ID Type</b> , <b>Dial tone</b> , <b>Ringing tone</b> , <b>Busy tone</b> and <b>Congestion tone</b> will be shown automatically on the page. If you cannot find out a suitable one, please choose <b>User Defined</b> and fill out the corresponding values for dial tone, ringing tone, busy tone, congestion tone by yourself for VoIP phone.

	<p><b>Advance Settings &gt;&gt; Phone</b></p>  <p>Also, you can specify each field for your necessity. It is recommended for you to use the default settings for VoIP communication.</p>
<b>Volume Gain</b>	<p><b>Mic Gain (1-10)/Speaker Gain (1-10)</b> - Adjust the volume of microphone and speaker by entering number from 1- 10. The larger of the number, the louder the volume is.</p>
<b>MISC</b>	<p><b>Dial Tone Power Level</b> - This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting.</p> <p><b>Ring Frequency</b> - This setting is used to drive the frequency of the ring tone. It is recommended for you to use the default setting.</p> <p><b>Call Waiting Tone Power Level</b> - This setting is used to adjust the loudness of the call waiting tone. The smaller the number is, the louder the tone is. It is recommended for you to use the default setting.</p>
<b>DTMF</b>	<p><b>DTMF Mode</b> – There are four DTMF modes for you to choose.</p>  <ul style="list-style-type: none"> <li>● <b>InBand</b> - Choose this one then the Vigor will send the DTMF tone as audio directly when you press the keypad on the phone.</li> </ul>

	<ul style="list-style-type: none"> <li>● <b>OutBand</b> - Choose this one then the Vigor will capture the keypad number you pressed and transform it to digital form then send to the other side; the receiver will generate the tone according to the digital form it receive. This function is very useful when the network traffic congestion occurs and it still can remain the accuracy of DTMF tone.</li> <li>● <b>SIP INFO</b>- Choose this one then the Vigor will capture the DTMF tone and transfer it into SIP form. Then it will be sent to the remote end with SIP message.</li> </ul> <p><b>Payload Type (rfc2833)</b> - Choose a number from 96 to 127, the default value was 101. This setting is available for the OutBand (RFC2833) mode.</p>
--	---

### 3.13.4 Status

From this page, you can find codec, connection and other important call status for each port.

<b>Out Calls</b>	Accumulation for the times of out call.
<b>Miss Calls</b>	Accumulation for the times of missing call.
<b>Speaker Gain</b>	The volume of present call.
<b>Log</b>	Display logs of VoIP calls.

## 3.14 ISDN

### 3.14.1 Basic Concept

**Note:** This function is used for “i” model.

ISDN means integrated services digital network that is an international communications standard for sending voice, video, and data over digital telephone lines or normal telephone wires.

Below shows the menu items for ISDN.

### 3.14.2 General Settings

This web page allows you to enable ISDN function.

ISDN >> General Setup

#### ISDN Setup

ISDN Port	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	Blocked MSN numbers for the router 1. <input type="text"/> 2. <input type="text"/> 3. <input type="text"/> 4. <input type="text"/> 5. <input type="text"/>
Country Code	<input type="text" value="International"/>	
D-Channel Mode		
ISDN	<input type="radio"/> Point-to-Point <input checked="" type="radio"/> Point-to-Multipoint	
Own Number	<input type="text"/>	
<p>"Own Number" means that the router will tell the remote end the ISDN number when it's placing an outgoing call.</p>		
<b>Index</b>	<b>MSN numbers for the router</b>

OK

Cancel

Available settings are explained as follows:

Item	Description
ISDN Port	Click <b>Enable</b> to open the ISDN port and <b>Disable</b> to close it.
Country Code	For proper operation on your local ISDN network, you should choose the correct country code.
D-Channel Mode	It allows you to configure ISDN layer2 protocol as: <b>Point-to-Point</b> - Configure ISDN port to use static TEI (Terminal Endpoint Identifier). <b>Point-to-Multipoint</b> - Configure ISDN port to use Dynamic TEI.
Own Number	Enter your ISDN number that you got from ISDN service provider (To have such number, you have offer your request from ISDN service provider first). Every outgoing call will carry the number to the receiver.
Blocked MSN Numbers for the router	Enter the specified MSN number into the fields to prevent the router from dialing the specific MSN number.
MSN Numbers for the	MSN Numbers mean that the router is able to accept only number-matched incoming calls. In addition, local ISDN

<b>Router</b>	<p>network provider should support MSN services. The router provides ten fields for MSN numbers. Note that MSN service must be acquired from your local telecom operators. By default, MSN function is disabled. If you leave the fields blank, all incoming calls will be accepted without number matching.</p> <p><b>1-10 fields</b> – Fill in the portion that is different with the own number.</p> <p>For example, the own number is <b>1234567</b> and MSN numbers are <b>1234550</b>, <b>1234517</b> and <b>1234582</b> respectively. You can type in <b>1234567</b> in the field of own number. Fill in <b>50</b>, <b>17</b> and <b>67</b> on the fields of 1, 2 and 3 one by one without typing 12345.</p>
---------------	---

### 3.14.3 Dial to a Single/Dual ISPs

Select **Dialing to a Single ISP** if you access the Internet via a single ISP.

ISDN >> **Dialing to a Single ISP**

**Single ISP**

<p><b>ISP Access Setup</b></p> <p>ISP Name <input type="text"/></p> <p>Dial Number <input type="text"/></p> <p>Username <input type="text"/></p> <p>Password <input type="text"/></p> <p><input type="checkbox"/> Require ISP callback (CBCP)</p> <p>Index(1-15) in <b>Schedule</b> Setup:</p> <p>=&gt; <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p>	<p><b>PPP/MP Setup</b></p> <p>Link Type <input type="text" value="Dialup BOD"/></p> <p>PPP Authentication <input type="text" value="PAP or CHAP"/></p> <p>Idle Timeout <input type="text" value="180"/> second(s)</p> <p><b>IP Address Assignment Method (IPCP)</b></p> <p>Fixed IP <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)</p> <p>Fixed IP Address <input type="text"/></p>
--	---

OK

Available settings are explained as follows:

Item	Description
<b>ISP Access Setup</b>	<p><b>ISP Name</b> - Enter your ISP name such as Seednet, Hinet and so on.</p> <p><b>Dial Number</b> -Enter the ISDN access number provided by your ISP.</p> <p><b>Username</b> - Enter the username provided by your ISP.</p> <p><b>Password</b> - Enter the password provided by your ISP.</p> <p><b>Require ISP Callback (CBCP)</b> -If your ISP supports the callback function, check this box to activate the Callback Control Protocol during the PPP negotiation.</p> <p><b>Scheduler (1-15)</b> - Enter the index of schedule profiles to control the Internet access according to the preconfigured schedules. Refer to section <b>Applications&gt;&gt;Schedule</b> for detailed configuration.</p>
<b>PPP/MP Setup</b>	<p><b>Link Type</b> – There are three link types provided here for different purpose. <b>Link Disable</b> disables the ISDN</p>

	<p>dial-out function. <b>Dialup 64Kbps</b> allows you to use one ISDN B channel for Internet access. <b>Dialup 128Kbps</b> allows you to use both ISDN B channels for Internet access. <b>Dialup BOD</b> (for detailed information of configuration, please refer to section <b>3.13.4</b>) stands for bandwidth-on-demand. The router will use only one B channel in low traffic situations. Once the single B channel bandwidth is fully used, the other B channel will be activated automatically through the dialup. For more detailed BOD parameter settings, please refer to the section of <b>Call Control</b>.</p> <p><b>PPP Authentication</b> - PAP only allows you to configure the PPP session to use the PAP protocol to negotiate the username and password with the ISP. <b>PAP or CHAP</b> is to configure the PPP session to use the PAP or CHAP protocols to negotiate the username and password with the ISP.</p> <p><b>Idle Timeout</b> - Idle timeout means the router will be disconnect after being idle for a preset amount of time. The default is 180 seconds. If you set the time to 0, the ISDN connection to the ISP will always remain on.</p>
<b>IP Address Assignment Method (IPCP)</b>	<p>In most environments, you should not change these settings as most ISPs provide a dynamic IP address for the router when it connects to the ISP. If your ISP provides a fixed IP address, check <b>Yes</b> and enter the IP address in the field of <b>Fixed IP Address</b>.</p>

Select **Dialing to Dual ISPs** if you have more than one ISP. You will be able to dial to both ISPs at the same time. This is mainly for those ISPs that do not support Multiple-Link PPP (ML-PPP). In such cases, dialing to two ISPs can increase the bandwidth utilization of the ISDN channels to 128kbps data speed.

#### ISDN >> Dialing to Dual ISPs

### 3.14.4 Call Control

Some applications require that the router (only for the ISDN models) be remotely activated, or be able to dial up to the ISP via the ISDN interface. Vigor routers provide this feature by allowing user to make a phone call to the router and then ask it to dial up to the ISP.

Accordingly, a teleworker can access the remote network to retrieve resources. Of course, a fixed IP address is required for WAN connection and some internal network resource has to be exposed for remote users, such as FTP, WWW.

#### ISDN >> Call Control

##### Call Control Setup

Dial Retry	<input type="text" value="0"/> times	Remote Activation	<input type="text"/>
Dial Delay Interval	<input type="text" value="0"/> second(s)		

##### PPP/MP Dial-Out Setup

<b>Basic Setup</b>		<b>Bandwidth On Demand (BOD) Setup</b>	
Link Type	<input type="text" value="Dialup BOD"/>	High Water Mark	<input type="text" value="7000"/> cps
PPP Authentication	<input type="text" value="PAP or CHAP"/>	High Water Time	<input type="text" value="30"/> second(s)
TCP Header Compression	<input type="text" value="None"/>	Low Water Mark	<input type="text" value="6000"/> cps
Idle Timeout	<input type="text" value="180"/> second(s)	Low Water Time	<input type="text" value="30"/> second(s)

OK

Available settings are explained as follows:

Item	Description
Call Control Setup	<p><b>Dial Retry</b> - It specifies the dial retry counts per triggered packet. A triggered packet is the packet whose destination is outside the local network. The default setting is no dial retry. If set to 5, for each triggered packet, the router will dial 5 times until it is connected to the ISP or remote access router.</p> <p><b>Dial Delay Interval</b> - It specifies the interval between dialup retries. By default, the interval is 0 second.</p> <p><b>Remote Activation</b> – It can help users who would like to access the server which is off the Internet in the head office. To remotely make the server to be available on the Internet, i.e. make the router in the head office activating its Internet access either by dialing-up or starting broadband connection, users can make a regular phone call (the number is set in the Remote Activation field) to the router as signaling it for activation. The phone call will be soon disconnected once the router is on line.</p> <p>Note that <b>Dialing to a Single ISP</b> should be pre-configured properly.</p>
Basic Setup	<p><b>Link Type</b> - Because ISDN has two B channels (64Kbps/per channel), you can specify whether you would like to have single B channel, two B channels or BOD (Bandwidth on Demand). Four options are available: Link Disable, Dialup 64Kbps, Dialup 128Kbps, Dialup BOD.</p>

	<div>Link Type</div> <div> Dialup BOD  Link Disable  Dialup 64Kbps  Dialup 128Kbps  Dialup BOD </div> <p><b>PPP Authentication</b> - It specifies the PPP authentication method for PPP/MP connections. Normally you can set it to PAP/CHAP for better compatibility.</p> <p><b>TCP Header Compression - VJ Compression:</b> It is used for TCP/IP protocol header compression. Normally it is set to Yes to improve bandwidth utilization.</p> <p><b>Idle Timeout</b> - Because our ISDN link type is <b>Dial On Demand</b>, the connection will be initiated only when needed.</p>
<b>Bandwidth-On-Demand (BOD) Setup</b>	<p>Bandwidth-On-Demand is for Multiple-Link PPP (ML-PPP or MP). The parameters are only applied when you set the <b>Link Type</b> to <b>Dialup BOD</b>. The ISDN usually use one B channel to access the Internet or remote network when you choose the Dialup BOD link type. The router will use the parameters here to decide on when you activate/drop the additional B channel. Note that <b>cps</b> (characters-per-second) measures the total link utilization.</p> <p><b>High Water Mark and High Water Time</b> - These parameters specify the situation in which the second channel will be activated. With the first connected channel, if its utilization exceeds the High Water Mark and such a channel is being used over the High Water Time, the additional channel will be activated. Thus, the total link speed will be 128kbps (two B channels).</p> <p><b>Low Water Mark and Low Water Time</b> - These parameters specify the situation in which the second channel will be dropped. In terms of the two B channels, if their utilization is under the Low Water Mark and these two channels are being used over the High Water Time, the additional channel will be dropped. As a result, the total link speed will be 64kbps (one B channel).</p>

## 3.15 Wireless LAN

This function is used for “n” models only.

### 3.15.1 Basic Concepts

Over recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches or is capable of reaching virtually every location on the surface of the earth. Hundreds of millions of people exchange information every day via wireless communication products. The Vigor “n” model, a.k.a. Vigor wireless router, is designed for maximum flexibility and efficiency of a small office/home. Any authorized staff can bring a built-in WLAN client PDA or notebook into a meeting room for conference without laying a lot of LAN cable or drilling holes everywhere. Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

The Vigor wireless routers are equipped with a wireless LAN interface compliant with the standard IEEE 802.11n draft 2 protocol. To boost its performance further, the Vigor Router is also loaded with advanced wireless technology to lift up data rate up to 300 Mbps\*. Hence, you can finally smoothly enjoy stream music and video.

**Note:** \* The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The **General Settings** will set up the information of this wireless network, including its SSID as identification, located channel etc.

### Multiple SSIDs

Vigor router supports four SSID settings for wireless connections. Each SSID can be defined with different name and download/upload rate for selecting by stations connected to the router wirelessly.

## Security Overview

**Real-time Hardware Encryption:** Vigor Router is equipped with a hardware AES encryption engine so it can apply the highest protection to your data without influencing user experience.

**Complete Security Standard Selection:** To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key is used for encryption during data transmission. WPA applies Temporal Key Integrity Protocol (TKIP) for data encryption while WPA2 applies AES. The WPA-Enterprise combines not only encryption but also authentication.

Since WEP has been proved vulnerable, you may consider using WPA for the most secure connection. You should select the appropriate security mechanism according to your needs. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

**Separate the Wireless and the Wired LAN- WLAN Isolation** enables you to isolate your wireless LAN from wired LAN for either quarantine or limit access reasons. To isolate means neither of the parties can access each other. To elaborate an example for business use, you may set up a wireless LAN for visitors only so they can connect to Internet without hassle of the confidential information leakage. For a more flexible deployment, you may add filters of MAC addresses to isolate users' access from wired LAN.

**Manage Wireless Stations - Station List** will display all the station in your wireless network and the status of their connection.

Below shows the menu items for Wireless LAN.

### 3.15.2 General Setup

By clicking the **General Settings**, a new web page will appear so that you could configure the SSID and the wireless channel. Please refer to the following figure for more information.

#### Wireless LAN >> General Setup

##### General Setting ( IEEE 802.11 )

☒ Enable Wireless LAN

Mode : Mixed(11b+11g+11n)

Channel: Channel 6, 2437MHz

	Enable	Hide SSID	SSID	Isolate Member	Isolate VPN
1	<input type="checkbox"/>	<input type="checkbox"/>	DrayTek	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>

**Note:**  
 Enabling the Isolate Member configuration will forbid the wireless clients associated to the same SSID from connecting to each other.

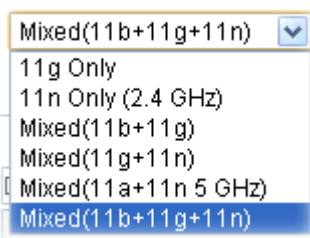

The isolate VPN configuration will isolate the wireless traffic from VPN connections and thus, wireless clients will not be able to access the VPN network under this setting.

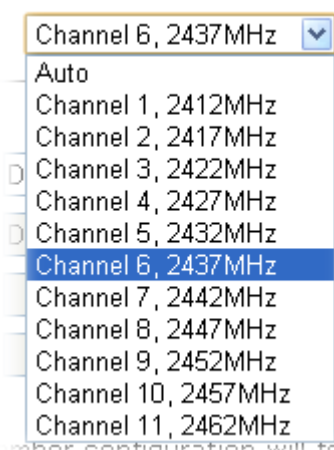

Associated **Schedule** Profiles: , , ,

**Note:**  
 Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored. Valid settings are profile indexes 1 to 15.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable Wireless LAN</b>	Check the box to enable wireless function.
<b>Mode</b>	<p>At present, the router can connect to 11n Only, 11g Only, Mixed (11b+11g), Mixed (11a+11n), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mixed (11b+11g+11n) mode.</p>  <p>In which, 802.11b/g operates on 2.4G band, 802.11a operates on 5G band, and 802.11n operates on either 2.4G or 5G band.</p>
<b>Channel</b>	Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system

	<p>determine for you.</p> 
<b>Hide SSID</b>	<p>Check it to prevent from wireless sniffing and make it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless utility, the user may only see the information except SSID or just cannot see any thing about Vigor wireless router while site surveying. The system allows you to set four sets of SSID for different usage. In default, the first set of SSID will be enabled. You can hide it for your necessity.</p>
<b>SSID</b>	<p>Means the identification of the wireless LAN. SSID can be any text numbers or various special characters. The default SSID is "DrayTek". We suggest you to change it.</p>
<b>Isolate</b>	<p><b>VPN</b> – Check this box to make the wireless clients (stations) with different VPN not accessing for each other.</p> <p><b>Member</b> –Check this box to make the wireless clients (stations) with the same SSID not accessing for each other.</p>
<b>Index(1-15)</b>	<p>Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in <b>Applications &gt;&gt; Schedule</b> setup. The default setting of this field is blank and the function will always work.</p>

### 3.15.3 Security

This page allows you to set security with different modes for SSID 1, 2, 3 and 4 respectively. After configuring the correct settings, please click **OK** to save and invoke it.

The default security mode is **Mixed (WPA+WPA2)/PSK**. Default Pre-Shared Key (PSK) is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

By clicking the **Security Settings**, a new web page will appear so that you could configure the settings of WPA and WEP.

#### Wireless LAN >> Security Settings

SSID 1	SSID 2	SSID 3	SSID 4
<p>Mode: <span>Disable</span></p> <p><u>WPA</u></p> <p>Encryption Mode: TKIP for WPA/AES for WPA2</p> <p>Pre-Shared Key(PSK): <span>*****</span></p> <p>Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x", for example "cfgs01a2..." or "0x655abcd....".</p> <p><u>WEP</u></p> <p>Encryption Mode: <span>64-Bit</span></p> <p><input checked="" type="radio"/> Key 1 : <span>*****</span></p> <p><input type="radio"/> Key 2 : <span>*****</span></p> <p><input type="radio"/> Key 3 : <span>*****</span></p> <p><input type="radio"/> Key 4 : <span>*****</span></p> <p><b>Note:</b></p> <p>Please configure the <b>RADIUS Server</b> if 802.1x is used.</p> <p>For 64 bit WEP key configurations, please insert 5 ASCII characters or 10 Hexadecimal digits leading by "0x". Examples are "AB312" or "0x4142333132".</p> <p>For 128 bit WEP key configurations, please insert 13 ASCII characters or 26 Hexadecimal digits leading by "0x".</p> <p><span>OK</span> <span>Cancel</span></p>			

Available settings are explained as follows:

Item	Description
Mode	There are several modes provided for you to choose.

**Note:** You should also set **RADIUS Server** simultaneously if 802.1x mode is selected.

**Disable** - Turn off the encryption mechanism.

**WEP**-Accepts only WEP clients and the encryption key should be entered in WEP Key.

**WEP/802.1x Only** - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

**WPA/802.1x Only**- Accepts only WPA clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

**WPA2/802.1x Only**- Accepts only WPA2 clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

**Mixed (WPA+WPA2/802.1x only)** - Accepts WPA and WPA2 clients simultaneously and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.

**WPA/PSK**-Accepts only WPA clients and the encryption key should be entered in PSK.

**WPA2/PSK**-Accepts only WPA2 clients and the encryption key should be entered in PSK.

**Mixed (WPA+ WPA2)/PSK** - Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.

<b>WPA</b>	<p>The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p><b>Pre-Shared Key (PSK)</b> - Either <b>8~63</b> ASCII characters, such as 012345678..(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>WEP</b>	<p><b>64-Bit</b> - For 64 bits WEP key, either <b>5</b> ASCII characters, such as 12345 (or 10 hexadecimal digitals leading by 0x, such as 0x4142434445.)</p> <p><b>128-Bit</b> - For 128 bits WEP key, either <b>13</b> ASCII</p>

	<p>characters, such as ABCDEFGHIJKLM (or 26 hexadecimal digits leading by 0x, such as 0x414243444546474849A4B4C4D).</p> <p>Encryption Mode: <span style="border: 1px solid black; padding: 2px;">64-Bit ▼ 64-Bit 128-Bit</span></p> <p>All wireless devices must support the same WEP encryption bit size and have the same key. <b>Four keys</b> can be entered here, but only one key can be selected at a time. The keys can be entered in ASCII or Hexadecimal. Check the key you wish to use.</p>
--	--

After finishing all the settings here, please click **OK** to save the configuration.

### 3.15.4 Access Control

In the **Access Control**, the router may restrict wireless access to certain wireless clients only by locking their MAC address into a black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only let them be able to connect by inserting their MAC addresses into a white list.

In the **Access Control** web page, users may configure the **white/black** list modes used by each SSID and the MAC addresses applied to their lists.

#### Wireless LAN >> Access Control

##### Access Control

Enable Mac Address Filter		<input type="checkbox"/> SSID 1	<span style="border: 1px solid gray; padding: 2px;">White List ▼</span>	<input type="checkbox"/> SSID 2	<span style="border: 1px solid gray; padding: 2px;">White List ▼</span>
		<input type="checkbox"/> SSID 3	<span style="border: 1px solid gray; padding: 2px;">White List ▼</span>	<input type="checkbox"/> SSID 4	<span style="border: 1px solid gray; padding: 2px;">White List ▼</span>

Index	Attribute	MAC Address	Apply SSID

Client's MAC Address :   :   :   :   :   :  

Apply SSID : ☐ SSID 1 ☐ SSID 2 ☐ SSID 3 ☐ SSID 4

Attribute : ☐ s: Isolate the station from LAN

Available settings are explained as follows:

Item	Description
<b>Enable Mac Address Filter</b>	Select to enable the MAC Address filter for wireless LAN identified with SSID 1 to 4 respectively. All the clients (expressed by MAC addresses) listed in the box can be grouped under different wireless LAN. For example, they

	can be grouped under SSID 1 and SSID 2 at the same time if you check SSID 1 and SSID 2.
<b>MAC Address Filter</b>	Display all MAC addresses that are edited before.
<b>Client's MAC Address</b>	Manually enter the MAC address of wireless client.
<b>Apply SSID</b>	After entering the client's MAC address, check the box of the SSIDs desired to insert this MAC address into their access control list.
<b>Attribute</b>	<b>s: Isolate the station from LAN</b> - select to isolate the wireless connection of the wireless client of the MAC address from LAN.
<b>Add</b>	Add a new MAC address into the list.
<b>Delete</b>	Delete the selected MAC address in the list.
<b>Edit</b>	Edit the selected MAC address in the list.
<b>Cancel</b>	Give up the access control set up.
<b>OK</b>	Click it to save the access control list.
<b>Clear All</b>	Clean all entries in the MAC address list.

### 3.15.5 WPS

**WPS (Wi-Fi Protected Setup)** provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

**Note:** Such function is available for the wireless station with WPS supported.

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the *Start PBC* button or using *PIN Code*.

- On the side of Vigor 2850 series which served as an AP, press **WPS** button once on the front panel of the router or click **Start PBC** on web configuration interface. On the side of a station with network card installed, press **Start PBC** button of network card.

- If you want to use PIN code, you have to know the PIN code specified in wireless client. Then provide the PIN code of the wireless client you wish to connect to the vigor router.

For WPS is supported in WPA-PSK or WPA2-PSK mode, if you do not choose such mode in **Wireless LAN>>Security**, you will see the following message box.

Please click **OK** and go back **Wireless LAN>>Security** to choose WPA-PSK or WPA2-PSK mode and access WPS again.

Below shows **Wireless LAN>>WPS** web page.

**Wireless LAN >> WPS (Wi-Fi Protected Setup)**

☒ Enable WPS ⓘ

**Wi-Fi Protected Setup Information**

WPS Status	Configured
SSID	DrayTek
Authentication Mode	Disable

**Device Configure**

Configure via Push Button	<input type="button" value="Start PBC"/>
Configure via Client PinCode	<input type="text"/> <input type="button" value="Start PIN"/>

Status: The Authentication Mode is NOT WPA/WPA2 PSK!!

**Note:** WPS can help your wireless client automatically connect to the Access point.  
ⓘ: WPS is Disabled.  
ⓘ: WPS is Enabled.  
ⓘ: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
Enable WPS	Check this box to enable WPS setting.
WPS Status	Display related system information for WPS. If the wireless security (encryption) function of the router is properly configured, you can see 'Configured' message here.
SSID	Display the SSID1 of the router. WPS is supported by SSID1 only.
Authentication Mode	Display current authentication mode of the router. Only WPA2/PSK and WPA/PSK support WPS.
Configure via Push Button	Click <b>Start PBC</b> to invoke Push-Button style WPS setup procedure. The router will wait for WPS requests from wireless clients about two minutes. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)
Configure via Client PinCode	Please input the PIN code specified in wireless client you wish to connect, and click <b>Start PIN</b> button. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)

### 3.15.6 WDS

WDS means Wireless Distribution System. It is a protocol for connecting two access points (AP) wirelessly. Usually, it can be used for the following application:

- Provide bridge traffic between two LANs through the air.
- Extend the coverage range of a WLAN.

To meet the above requirement, two WDS modes are implemented in Vigor router. One is **Bridge**, the other is **Repeater**. Below shows the function of WDS-bridge interface:

The application for the WDS-Repeater mode is depicted as below:

The major difference between these two modes is that: while in **Repeater** mode, the packets received from one peer AP can be repeated to another peer AP through WDS links. Yet in

**Bridge** mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following examples, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 **CANNOT** communicate with hosts connected to Bridge 3 through Bridge 2.

Click **WDS** from **Wireless LAN** menu. The following page will be shown.

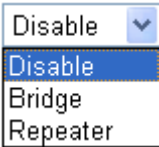

Wireless LAN >> WDS Settings

WDS Settings

<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>																																																			
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>																																																			

OK
Cancel

Available settings are explained as follows:

Item	Description
Mode	<p>Choose the mode for WDS setting. <b>Disable</b> mode will not invoke any WDS setting. <b>Bridge</b> mode is designed to fulfill the first type of application. <b>Repeater</b> mode is for the second one.</p> 
Security	<p>There are three types for security, <b>Disable</b>, <b>WEP</b> and <b>Pre-shared key</b>. The setting you choose here will make the following WEP or Pre-shared key field valid or not. Choose one of the types for the router.</p>
WEP	<p>Check this box to use the same key set in <b>Security Settings</b> page. If you did not set any key in <b>Security Settings</b> page, this check box will be dimmed.</p>
Pre-shared Key	<p><b>Type</b> – There are some types for you to choose. <b>WPA</b> and <b>WPA2</b> are used for WDS devices (e.g. 2850n wireless router, you can set the encryption mode as WPA or WPA2 to establish your WDS system between AP and the router.</p> <p><b>Key</b> - Type 8 ~ 63 ASCII characters or 64 hexadecimal digits leading by "0x".</p>
Bridge	<p>If you choose Bridge as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Yet please disable the unused link to get better performance. If you want to invoke the peer MAC address, remember to check <b>Enable</b> box in the front of the MAC address after typing.</p>
Repeater	<p>If you choose Repeater as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Similarly, if you want to invoke the peer MAC address, remember to check <b>Enable</b> box in the front of the MAC address after typing.</p>
Access Point Function	<p>Click <b>Enable</b> to make this router serving as an access point; click <b>Disable</b> to cancel this function.</p>
Status	<p>It allows user to send "hello" message to peers. Yet, it is valid only when the peer also supports this function.</p>

### 3.15.7 Advanced Setting

This page allows users to set advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

#### Wireless LAN >> Advanced Setting

##### HT Physical Mode

Operation Mode	<input checked="" type="radio"/> Mixed Mode	<input type="radio"/> Green Field
Channel Bandwidth	<input type="radio"/> 20	<input checked="" type="radio"/> 20/40
Guard Interval	<input type="radio"/> long	<input checked="" type="radio"/> auto
Aggregation MSDU(A-MSDU)	<input type="radio"/> Disable	<input checked="" type="radio"/> Enable
Long Preamble	<input checked="" type="radio"/> Disable	<input type="radio"/> Enable
Packet-OVERDRIVE™ TX Burst	<input checked="" type="radio"/> Disable	<input type="radio"/> Enable

OK

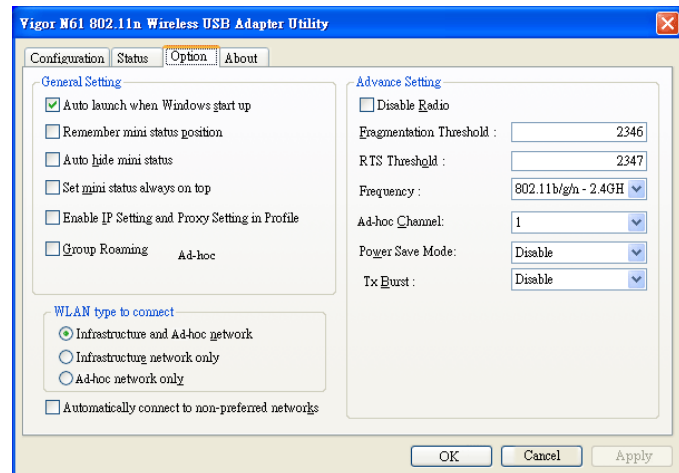

Available settings are explained as follows:

Item	Description
<b>Operation Mode</b>	<p><b>Mixed Mode</b> – the router can transmit data with the ways supported in both 802.11a/b/g and 802.11n standards. However, the entire wireless transmission will be slowed down if 802.11g or 802.11b wireless client is connected.</p> <p><b>Green Field</b> – to get the highest throughput, please choose such mode. Such mode can make the data transmission happening between 11n systems only. In addition, it does not have protection mechanism to avoid the conflict with neighboring devices of 802.11a/b/g.</p>
<b>Channel Bandwidth</b>	<p><b>20-</b> the router will use 20Mhz for data transmission and receiving between the AP and the stations.</p> <p><b>20/40</b> – the router will use 20Mhz or 40Mhz for data transmission and receiving according to the station capability. Such channel can increase the performance for data transit.</p>
<b>Guard Interval</b>	<p>It is to assure the safety of propagation delays and reflections for the sensitive digital data. If you choose <b>auto</b> as guard interval, the AP router will choose short guard interval (increasing the wireless performance) or long guard interval for data transmit based on the station capability.</p>
<b>Long Preamble</b>	<p>This option is to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. Click <b>Enable</b> to use <b>Long Preamble</b> if needed to communicate with this kind of devices.</p>
<b>Packet-OVERDRIVE</b>	<p>This feature can enhance the performance in data transmission about 40%* more (by checking <b>Tx Burst</b>). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. That is, the wireless client must support this feature and</p>

invoke the function, too.

**Note:** Vigor N61 wireless adapter supports this function. Therefore, you can use and install it into your PC for matching with Packet-OVERDRIVE (refer to the following picture of Vigor N61 wireless utility window, choose **Enable** for **TxBURST** on the tab of **Option**).

Tx Burst : Disable  
Disable  
Enable

**Note:** \* means the real transmission rate depends on the environment of the network.

After finishing all the settings here, please click **OK** to save the configuration.

### 3.15.8 WMM Configuration

WMM is an abbreviation of Wi-Fi Multimedia. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs). The categories are designed with specific types of traffic, voice, video, best effort and low priority data. There are four accessing categories - AC\_BE , AC\_BK, AC\_VI and AC\_VO for WMM.

APSD (automatic power-save delivery) is an enhancement over the power-save mechanisms supported by Wi-Fi networks. It allows devices to take more time in sleeping state and consume less power to improve the performance by minimizing transmission latency.

Wireless LAN >> WMM Configuration

**WMM Configuration** | [Set to Factory Default](#)

WMM Capable ☒ Enable ☐ Disable

APSD Capable ☐ Enable ☒ Disable

**WMM Parameters of Access Point**

	Aifsn	CWMin	CWMax	Txop	ACM	AckPolicy
AC_BE	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="6"/>	<input type="text" value="0"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_BK	<input type="text" value="7"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_VI	<input type="text" value="1"/>	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="94"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_VO	<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="47"/>	<input type="checkbox"/>	<input type="checkbox"/>

**WMM Parameters of Station**

	Aifsn	CWMin	CWMax	Txop	ACM
AC_BE	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>
AC_BK	<input type="text" value="7"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>
AC_VI	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="94"/>	<input type="checkbox"/>
AC_VO	<input type="text" value="2"/>	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="47"/>	<input type="checkbox"/>

OK

Available settings are explained as follows:

Item	Description
WMM Capable	To apply WMM parameters for wireless data transmission, please click the <b>Enable</b> radio button.
APSD Capable	The default setting is <b>Disable</b> .
Aifsn	It controls how long the client waits for each data transmission. Please specify the value ranging from 1 to 15. Such parameter will influence the time delay for WMM accessing categories. For the service of voice or video image, please set small value for AC_VI and AC_VO categories For the service of e-mail or web browsing, please set large value for AC_BE and AC_BK categories.
CWMin/CWMax	<b>CWMin</b> means contention Window-Min and <b>CWMax</b> means contention Window-Max. Please specify the value ranging from 1 to 15. Be aware that CWMax value must be greater than CWMin or equals to CWMin value. Both values will influence the time delay for WMM accessing categories. The difference between AC_VI and AC_VO

	categories must be smaller; however, the difference between AC_BE and AC_BK categories must be greater.
<b>Txop</b>	It means transmission opportunity. For WMM categories of AC_VI and AC_VO that need higher priorities in data transmission, please set greater value for them to get highest transmission opportunity. Specify the value ranging from 0 to 65535.
<b>ACM</b>	It is an abbreviation of Admission control Mandatory. It can restrict stations from using specific category class if it is checked. <b>Note:</b> Vigor2850 provides standard WMM configuration in the web page. If you want to modify the parameters, please refer to the Wi-Fi WMM standard specification.
<b>AckPolicy</b>	“Uncheck” (default value) the box means the AP router will answer the response request while transmitting WMM packets through wireless connection. It can assure that the peer must receive the WMM packets. “Check” the box means the AP router will not answer any response request for the transmitting packets. It will have better performance with lower reliability.

### 3.15.9 AP Discovery

Vigor router can scan all regulatory channels and find working APs in the neighborhood. Based on the scanning result, users will know which channel is clean for usage. Also, it can be used to facilitate finding an AP for a WDS link. Notice that during the scanning process (about 5 seconds), no client is allowed to connect to Vigor.

This page is used to scan the existence of the APs on the wireless LAN. Yet, only the AP which is in the same channel of this router can be found. Please click **Scan** to discover all the connected APs.

[Wireless LAN >> Access Point Discovery](#)

#### Access Point List

BSSID	Channel	SSID

See [Statistics](#).

**Note:** During the scanning process (~5 seconds), no station is allowed to connect with the router.

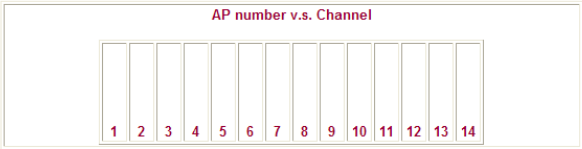

---

**Add to [WDS Settings](#) :**

AP's MAC address  :  :  :  :  :

☒ Bridge ☐ Repeater

Available settings are explained as follows:

Item	Description
<b>Scan</b>	It is used to discover all the connected AP. The results will be shown on the box above this button.
<b>Statistics</b>	<p>It displays the statistics for the channels used by APs.</p> <p>Wireless LAN &gt;&gt; Site Survey Statistics</p> <hr/> <p>Recommended channels for usage: 1 2 3 4 5 6 7 8 9 10 11 12 13</p> <div> <p>AP number v.s. Channel</p>  <p>Channel</p> </div> <p>Cancel</p>
<b>Add to</b>	<p>If you want the found AP applying the WDS settings, please type in the AP's MAC address on the bottom of the page and click Bridge or Repeater. Next, click <b>Add to</b>. Later, the MAC address of the AP will be added to Bridge or Repeater field of WDS settings page.</p>

### 3.15.10 Station List

**Station List** provides the knowledge of connecting wireless clients now along with its status code. There is a code summary below for explanation. For convenient **Access Control**, you can select a WLAN station and click **Add to Access Control** below.

Wireless LAN >> Station List

**Station List**

StatusMAC Address

Refresh

**Status Codes :**  
C: Connected, No encryption.  
E: Connected, WEP.  
P: Connected, WPA.  
A: Connected, WPA2.  
B: Blocked by Access Control.  
N: Connecting.  
F: Fail to pass 802.1X or WPA/PSK authentication.

**Note:** After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

**Add to Access Control :**

Client's MAC address

Add

Available settings are explained as follows:

Item	Description
Refresh	Click this button to refresh the status of station list.
Add	Click this button to add current typed MAC address into <b>Access Control</b> .

### 3.15.11 Bandwidth Management

It controls the bandwidth limit for all the wireless clients accessing into Internet through such router.

## Wireless LAN >> Bandwidth Management

SSID 1	SSID 2	SSID 3	SSID 4
SSID:		DrayTek	
Enable		<input checked="" type="checkbox"/>	
Bandwidth Limit Type		Auto Adjustment ▼	
Total Upload Limit(Kbps)		30000	
Total Download Limit(Kbps)		30000	

**Note:** 1.Download: Traffic going to any station.Upload: Traffic being sent from a wireless station.  
2.Allow auto adjustment could make the best utilization of available bandwidth.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click this button to enable such function.
<b>Bandwidth Limit Type</b>	There are two types to be specify. <div> Auto Adjustment ▼  Auto Adjustment  Per Station Limit </div>
<b>Auto Adjustment</b>	<p>If you choose <b>Auto Adjustment</b>, the router will assign the required bandwidth for each wireless station according to the real usage.</p> <p><b>Total Upload Limit</b> –Default value is 30,000 kbps. All the wireless stations share the bandwidth for uploading without exceeding the valued typed here.</p> <p><b>Total Download Limit</b> - Default value is 30,000 kbps. All the wireless stations share the bandwidth for downloading without exceeding the valued typed here.</p>
<b>Per Station Limit</b>	<p>If you choose <b>Per Station Limit</b>, the router will offer the bandwidth for each wireless station based on the values configured here.</p> <p><b>Upload Limit</b> –Default value is 30,000 kbps. Each wireless station can have the bandwidth for uploading without exceeding the values typed here.</p> <p><b>Download Limit</b> - Default value is 30,000 kbps. Each wireless station can have the bandwidth for uploading without exceeding the values typed here.</p>

After finished the above settings, click **OK** to save the configuration.

## 3.16 SSL VPN

An SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that can be used with a standard Web browser.

There are two benefits that SSL VPN provides:

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

### 3.16.1 General Setup

This page determines the general configuration for SSL VPN Server and SSL Tunnel.

Web Access Control >> General Setup

#### SSL VPN General Setup

Port	<input type="text" value="443"/>	(Default: 443)
Server Certificate	<input type="text" value="self-signed"/>	
Encryption Key Algorithm	<input type="radio"/> High - AES(128 bits) and 3DES <input checked="" type="radio"/> Default - RC4(128 bits) <input type="radio"/> Low - DES	

**Note:** The settings will act on all SSL applications.

Available settings are explained as follows:

Item	Description
Port	Such port is set for SSL VPN server. It will not affect the HTTPS Port configuration set in <b>System Maintenance&gt;&gt;Management</b> . In general, the default setting is 443.
Server Certificate	When the client does not set any certificate, default certificate will be used for HTTPS and SSL VPN server. Choose any one of the user-defined certificates from the drop down list if users set several certificates previously. Otherwise, choose <b>Self-signed</b> to use the router's built-in default certificate. The default certificate can be used in SSL VPN server and HTTPS Web Proxy.

<b>Encryption Key Algorithm</b>	Choose the encryption level for the data connection in SSL VPN server.
---------------------------------	--

After finishing all the settings here, please click **OK** to save the configuration.

### 3.16.2 SSL Web Proxy

SSL Web Proxy will allow the remote users to access the internal web sites over SSL.

[Web Access Control >> SSL Web Proxy](#)

SSL Web Proxy Servers Profiles: [Set to Factory Default](#)

Index	Name	URL	Active
<a href="#">1.</a>			x
<a href="#">2.</a>			x
<a href="#">3.</a>			x
<a href="#">4.</a>			x
<a href="#">5.</a>			x
<a href="#">6.</a>			x
<a href="#">7.</a>			x
<a href="#">8.</a>			x
<a href="#">9.</a>			x
<a href="#">10.</a>			x

Each item is explained as follows:

Item	Description
Name	Display the name of the profile that you create.
URL	Display the URL.
Active	Display current status (active or inactive) of such profile.

Click number link under Index filed to set detailed configuration.

[Web Access Control >> SSL Web Proxy](#)

Profile Index : 1

Name	<input type="text"/>
URL	<input type="text"/>
Host IP Address	<input type="text"/>
Access Method	SSL <input type="button" value="v"/>

**Note:** URL format must be entered as http://ip:port/directory or http://Domain\_name/directory where Domain\_name is a FQDN.

Available settings are explained as follows:

Item	Description
Name	Type name of the profile. The length of the name is limited to 15 characters.
URL	Type the address (function variation or IP address) or path of the proxy server.

<b>Host IP Address</b>	If you type function variation as URL, you have to type corresponding IP address in this field. Such field must match with URL setting.
<b>Access Method</b>	<p>There are three modes for you to choose.</p> <p><b>Disable</b> – the profile will be inactive. If you choose <b>Disable</b>, all the web proxy profile appeared under VPN remote dial-in web page will disappear.</p> <p><b>Secured Port Redirection</b> – such technique applies private port mapping to random WAN port. There are two restrictions for proxy web server for such selection: 1) it is only used for WAN to LAN access, the web server must be configured behind vigor router; 2) web server gateway must be indicated to vigor router. In addition, users must execute “Connect” manually in SSL Client Portal page.</p> <p><b>SSL</b> – if you choose such selection, web proxy over SSL will be applied for VPN.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 3.16.3 SSL Application

It provides a secure and flexible solution for network resources, including VNC (Virtual Network Computer) /RDP (Remote Desktop Protocol) /SAMBA, to any remote user with access to Internet and a web browser.

**Web Access Control >> SSL Application**

SSL Applications Profiles:				<a href="#">Set to Factory Default</a>
Index	Name	Host Address	Service	Active
<a href="#">1.</a>				×
<a href="#">2.</a>				×
<a href="#">3.</a>				×
<a href="#">4.</a>				×
<a href="#">5.</a>				×
<a href="#">6.</a>				×
<a href="#">7.</a>				×
<a href="#">8.</a>				×
<a href="#">9.</a>				×
<a href="#">10.</a>				×

Each item is explained as follows:

Item	Description
<b>Name</b>	Display the application name of the profile that you create.
<b>Host Address</b>	Display the IP address for VNC/RDP or SAMBA path.
<b>Service</b>	Display the type of the service selected, e.g., VNC/RDP/SAMBA.
<b>Active</b>	Display current status (active or inactive) of the selected profile.

To create a new SSL application profile:

1. Click number link under Index filed to set detailed configuration.

## Web Access Control >> SSL Application

### SSL Applications Profiles:

Index	Name	
<a href="#">1.</a>		
<a href="#">2.</a>		
<a href="#">3.</a>		

2. The following page will appear.

Available settings are explained as follows:

Item	Description
<b>Enable Application Server</b>	Check the box to enable such profile.
<b>Application Name</b>	Type a name for such application. The length of the name is limited to 23 characters.
<b>Application</b>	<p>There are three types offered for you to create an application profile.</p>  <p><b>Virtual Network Computing (VNC)</b> – It allows you to access and control a remote PC through VNC protocol.</p> <p><b>Remote Desktop Protocol (RDP)</b> – It allows you to access and control a remote PC through RDP protocol.</p> <p><b>Samba Application</b> – It allows you to access and control a remote PC through Samba service.</p>

<b>IP Address</b>	If you choose VNC or RDP, you have to type the IP address for this protocol.
<b>Port</b>	If you choose VNC or RDP, you have to specify the port used for this protocol. The default setting is 5900.
<b>Idle Timeout</b>	If you choose VNC, you have to specify the time for disconnecting the SSL VPN tunnel.
<b>Scaling</b>	If you choose VNC, you have to choose the percentage (100%, 80%, 60%) for such application.
<b>Screen Size</b>	If you choose RDP, you have to choose the screen size for such application.
<b>Samba Path</b>	If you choose Samba, you have to specify the path of the Samba service.

3. Enter the required information.
4. After finished the above settings, click **OK** to save the configuration.

### 3.16.4 User Account

With SSL VPN, Vigor2850 series let teleworkers have convenient and simple remote access to central site VPN. The teleworkers do not need to install any VPN software manually. From regular web browser, you can establish VPN connection back to your main office even in a guest network or web cafe. The SSL technology is the same as the encryption that you use for secure web sites such as your online bank. The SSL VPN can be operated in either full tunnel mode or proxy mode. Now, Vigor2850 series allows up to 16 simultaneous incoming users.

For SSL VPN, identity authentication and power management are implemented through deploying user accounts. Therefore, the user account for SSL VPN must be set together with remote dial-in user web page. Such menu item will guide to access into **VPN and Remote Access>>Remote Dial-in user**.

**Web Access Control >> Remote Dial-in User**

Available settings are explained as follows:

Item	Description
<b>User account and Authentication</b>	<p><b>Enable this account</b> - Check the box to enable this function.</p> <p><b>Idle Timeout</b>- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p>
<b>Allowed Dial-In Type</b>	<p><b>PPTP</b> - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p><b>IPSec Tunnel</b> - Allow the remote dial-in user to make an IPSec VPN connection through Internet.</p> <p><b>L2TP with IPSec Policy</b> - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p> <ul style="list-style-type: none"> <li>● <b>None</b> - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>● <b>Nice to Have</b> - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.</li> <li>● <b>Must</b> -Specify the IPSec policy to be definitely applied on the L2TP connection.</li> </ul> <p><b>SSL Tunnel</b> - It allows the remote dial-in user to make an SSL VPN Tunnel connection through Internet, suitable for the application through network accessing (e.g.,</p>

Item	Description
	<p>PPTP/L2TP/IPSec)</p> <p>If you check this box, the function of SSL Tunnel for this account will be activated immediately.</p> <p><b>Specify Remote Node</b> - Check the checkbox to specify the IP address of the remote dial-in user, ISDN number or peer ID (used in IKE aggressive mode). If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the <b>general settings</b>.</p> <p><b>Netbios Naming Packet</b></p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.</li> <li>● <b>Block</b> – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.</li> </ul> <p><b>Multicast via VPN</b> - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click this button to let multicast packets pass through the router.</li> <li>● <b>Block</b> – This is default setting. Click this button to let multicast packets be blocked by the router.</li> </ul>
Subnet	<p>Chose one of the subnet selections for such VPN profile.</p>  <p><b>Assign Static IP Address</b> – Please type a static IP address for the subnet you specified.</p>
User Name	This field is applicable when you select PPTP or L2TP with or without IPSec policy above.
Password	This field is applicable when you select PPTP or L2TP with or without IPSec policy above.
Enable Mobile One-Time Passwords (mOTP)	<p>Check this box to make the authentication with mOTP function.</p> <p><b>PIN Code</b> – Type the code for authentication (e.g, 1234).</p> <p><b>Secret</b> – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
IKE Authentication Method	This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.

Item	Description
	<p><b>Pre-Shared Key</b> - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p><b>Digital Signature (X.509)</b> – Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b>.</p>
<b>IPSec Security Method</b>	<p>This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p><b>Medium-Authentication Header (AH)</b> means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p><b>High-Encapsulating Security Payload (ESP)</b> means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p><b>Local ID</b> - Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 3.16.5 User Group

There are 10 user group profiles which can be created for authentication by LDAP server. Such profiles will be used by applications such as User Management, VPN and etc.

[Web Access Control >> User Group](#)

SSL User Group Profiles:			<a href="#">Set to Factory Default</a>
Index	Name	Status	
<a href="#">1.</a>		x	
<a href="#">2.</a>		x	
<a href="#">3.</a>		x	
<a href="#">4.</a>		x	
<a href="#">5.</a>		x	
<a href="#">6.</a>		x	
<a href="#">7.</a>		x	
<a href="#">8.</a>		x	
<a href="#">9.</a>		x	
<a href="#">10.</a>		x	

Each item is explained as follows:

Item	Description
<b>Set to Factory Default</b>	Click to clear all indexes.
<b>Index</b>	Display the number of the client which connecting to FTP server.
<b>Name</b>	Display the name of the group profile.

Click any index number link to open the following page for detailed configuration.

Cancel

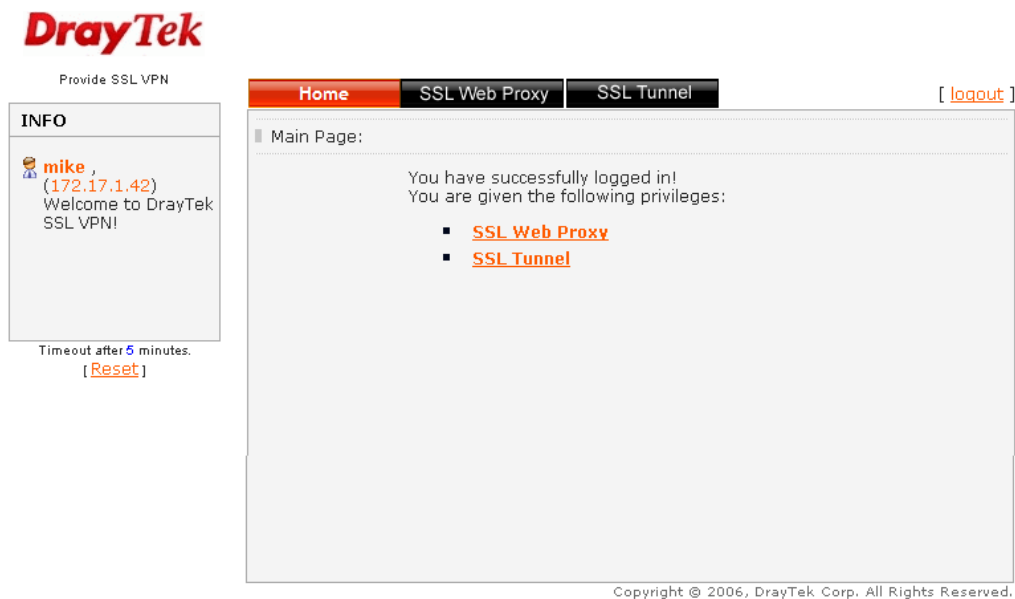

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable such profile.
<b>Group Name</b>	Type a name for such profile. The length of the name is limited to 23 characters.
<b>Access Authority</b>	<p>Specify the authority for such profile.</p> <p>At present, Vigor router allows you to create SSL Web Proxy and SSL Application profiles used for SSL VPN. The available profiles will be displayed here for you to select.</p> <div> <p>Access Authority</p> <div> <input checked="" type="checkbox"/> SSL Web Proxy <input checked="" type="checkbox"/> SSL Application <input type="checkbox"/> SSL_WP_1 <input type="checkbox"/> Game_APP </div> </div>
<b>Authentication Methods</b>	<p>It can determine the authentication method used for such profile.</p> <p><b>Local User DataBase</b> – The system will do the authentication by using the user defined account profiles (in <b>VPN and Remote Access&gt;&gt;Remote Dial-In User</b>). The enabled profiles will be listed in the <b>Available User Account</b> on the left box. To add a profile into a group, simply choose the one from the left box and click the &gt;&gt; button. It will be displayed in the <b>Selected User Account</b> on the right box. For detailed information about configuring the profile setting, refer to <b>Objects Setting&gt;&gt;IP Group</b>.</p> <p><b>RADIUS</b> – The RADIUS server will do the authentication by using the username and password</p> <p><b>LDAP / Active Directory</b> - If it is checked, the LDAP / AD server will do the authentication by using the username, password, information stated on the selected profiles.</p> <p>If the above three options are enabled, the system will do the authentication based on them in sequence.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 3.16.6 Online User Status

If you have finished the configuration of SSL Web Proxy (server), users can find out corresponding settings when they access into **Draytek SSL VPN portal** interface.

Next, users can open **SSL VPN>> Online Status** to view logging status of SSL VPN.

#### Web Access Control >> Online User Status

Refresh Seconds : 10 <input type="button" value="refresh"/>			
Active User	Host IP	Time out(seconds)	Action
Kate	192.168.30.14	299	<input type="button" value="Drop"/>

Available settings are explained as follows:

Item	Description
Active User	Display current user who visit SSL VPN server.
Host IP	Display the IP address for the host.
Time out	Display the time remaining for logging out.
Action	You can click <b>Drop</b> to drop certain login user from the router's SSL Portal UI.

## 3.17 USB Application

USB storage disk connected on Vigor router can be regarded as a server. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications. After setting the configuration in **USB Application**, you can type the IP address of the Vigor router and username/password created in **USB Application>>USB User Management** on the client software. Then, the client can use the FTP site (USB storage disk) or share the Samba service through Vigor router.

### 3.17.1 USB General Settings

This page will determine the number of concurrent FTP connection, default charset for FTP server and enable Samba service. At present, the Vigor router can support USB storage disk with formats of FAT16 and FAT32 only. Therefore, before connecting the USB storage disk into the Vigor router, please make sure the memory format for the USB storage disk is FAT16 or FAT32. It is recommended for you to use FAT32 for viewing the filename completely (FAT16 cannot support long filename).

#### USB Application >> USB General Settings

##### USB General Settings

###### General Settings

Simultaneous FTP Connections  (Maximum 6)  
Default Charset

###### Samba Service Settings(Network Neighborhood)

☐ Enable ☒ Disable

###### Access Mode

☒ LAN Only ☐ LAN And WAN

###### NetBios Name Service

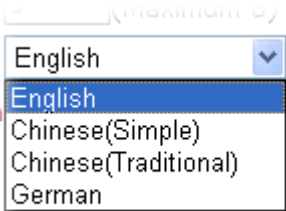

Workgroup Name   
Host Name

**Note:** 1. If Charset is set to "English", only English long file name is supported.  
2. Multi-session ftp download will be banned by Router FTP server. If your ftp client have multi-connection mechanism, such as FileZilla, you may limit client connections setting to 1 to get better performance.  
3. A workgroup name must not be the same as the host name. The workgroup name and the host name can have as many as 15 characters and a host name can have as many as 23 characters , but both cannot contain any of the following: . ; " < > \* + = / \ | ?.

OK

Available settings are explained as follows:

Item	Description
General Settings	<b>Simultaneous FTP Connections</b> - This field is used to specify the quantity of the FTP sessions. The router allows

	<p>up to 6 FTP sessions connecting to USB storage disk at one time.</p> <p><b>Default Charset</b> - At present, Vigor router supports four types of character sets. Default Charset is for English based file name.</p> 
<b>Samba Service Settings</b>	Click <b>Enable</b> to invoke samba service via the router.
<b>Access Mode</b>	<p><b>LAN Only</b> – Users coming from internet cannot connect to the samba server of the router.</p> <p><b>LAN And WAN</b> - Both LAN and WAN users can access samba server of the router.</p>
<b>NetBios Name Service</b>	<p>For the NetBios service of USB storage disk, you have to specify a workgroup name and a host name. A workgroup name must not be the same as the host name. The workgroup name can have as many as 15 characters and the host name can have as many as 23 characters. Both them cannot contain any of the following--- ; : " &lt; &gt; * + = \   ?.</p> <p><b>Workgroup Name</b> – Type a name for the workgroup.</p> <p><b>Host Name</b> – Type the host name for the router.</p>

### 3.17.2 USB User Management

This page allows you to set profiles for FTP/Samba users. Any user who wants to access into the USB storage disk must type the same username and password configured in this page. Before adding or modifying settings in this page, please insert a USB storage disk first. Otherwise, an error message will appear to warn you.

[USB Application >> USB User Management](#)

USB User Management			<a href="#">Set to Factory Default</a>

<a href="#">3.</a>			<a href="#">11.</a>		
<a href="#">4.</a>			<a href="#">12.</a>		
<a href="#">5.</a>			<a href="#">13.</a>		
<a href="#">6.</a>			<a href="#">14.</a>		
<a href="#">7.</a>			<a href="#">15.</a>		
<a href="#">8.</a>			<a href="#">16.</a>		

Click index number to access into configuration page.

**USB Application >> USB User Management**

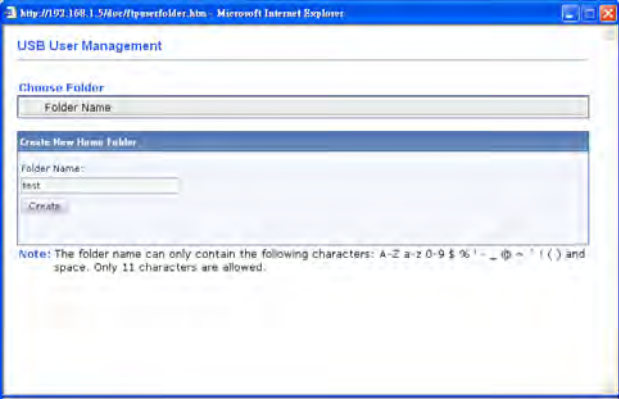

**Profile Index: 1**

FTP/Samba User	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Username	<input type="text"/>
Password	<input type="text"/> (Maximum 11 Characters)
Confirm Password	<input type="text"/>
Home Folder	<input type="text"/> 
<b>Access Rule</b>	
File	<input type="checkbox"/> Read <input type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

**Note:** The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - \_ @ ~ ` ! ( ) / and space.

Available settings are explained as follows:

Item	Description
<b>FTP/Samba User</b>	<b>Enable</b> – Click this button to activate this profile (account) for FTP service or Samba User service. Later, the user can use the username specified in this page to login into FTP server. <b>Disable</b> – Click this button to disable such profile.
<b>Username</b>	Type the username for FTP/Samba users for accessing into FTP server (USB storage disk). Be aware that users cannot access into USB storage disk in anonymity. Later, you can open FTP client software and type the username specified here for accessing into USB storage disk. <b>Note:</b> “Admin” could not be typed here as username, for the word is specified for accessing into web pages of Vigor router only. Also, it is reserved for FTP firmware upgrade usage. <b>Note:</b> FTP Passive mode is not supported by Vigor Router. Please disable the mode on the FTP client.
<b>Password</b>	Type the password for FTP/Samba users for accessing FTP server. Later, you can open FTP client software and type the password specified here for accessing into USB storage disk.
<b>Confirm Password</b>	Type the password again to make confirmation.
<b>Home Folder</b>	It determines the folder for the client to access into. The user can enter a directory name in this field. Then, after clicking <b>OK</b> , the router will create the specific/new folder in the USB storage disk. In addition, if the user types “/” here, he/she can access into all of the disk folders and files in USB storage disk. <b>Note:</b> When write protect status for the USB storage disk is <b>ON</b> , you cannot type any new folder name in this field. Only “/” can be used in such case.

	<p>You can click  to open the following dialog to add any new folder which can be specified as the Home Folder.</p> 
<b>Access Rule</b>	<p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p><b>File</b> – Check the items (Read, Write and Delete) for such profile.</p> <p><b>Directory</b> – Check the items (List, Create and Remove) for such profile.</p>

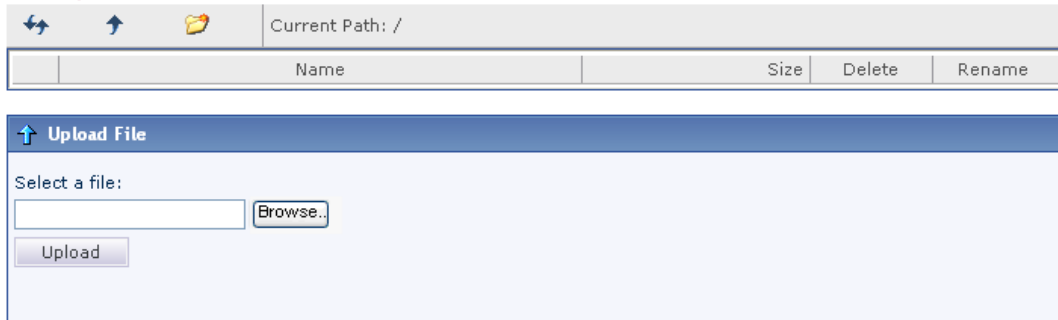

Before you click **OK**, you have to insert a USB storage disk into the USB interface of the Vigor router. Otherwise, you cannot save the configuration.

### 3.17.3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

[USB Application >> File Explorer](#)

#### File Explorer

**Note:** The folder can not be deleted when it is not empty.

Available settings are explained as follows:

Item	Description
 <b>Refresh</b>	Click this icon to refresh files list.
 <b>Back</b>	Click this icon to return to the upper directory.
 <b>Create</b>	Click this icon to add a new folder.
<b>Current Path</b>	Display current folder.
<b>Upload</b>	Click this button to upload the selected file to the USB storage disk. The uploaded file in the USB diskette can be shared for other user through FTP.

### 3.17.4 USB Disk Status

This page is to monitor the status for the users who accessing into FTP or Samba server (USB storage disk) via the Vigor router. If you want to remove the storage disk from USB port in router, please click **Disconnect USB Disk** first. And then, remove the USB storage disk later.

[USB Application >> USB Disk Status](#)

#### USB Mass Storage Device Status

**Note:** If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Available settings are explained as follows:

Item	Description
<b>Connection Status</b>	If there is no USB storage disk connected to Vigor router, “ <b>No Disk Connected</b> ” will be shown here.
<b>Disk Capacity</b>	It displays the total capacity of the USB storage disk.
<b>Free Capacity</b>	It displays the free space of the USB storage disk. Click <b>Refresh</b> at any time to get new status for free capacity.
<b>Index</b>	It displays the number of the client which connecting to FTP server.
<b>IP Address</b>	It displays the IP address of the user’s host which connecting to the FTP server.
<b>Username</b>	It displays the username that user uses to login to the FTP server.

When you insert USB storage disk into the Vigor router, the system will start to find out such device within several seconds.

### 3.17.5 Modem Support List

Such page provides the information about the brand name and model name of the USB modems which are supported by Vigor router.

#### USB Application >> Modem Support List

The following compatibility tests listed above Vigor router models with USB modems / mobiles. If it is confirmed as the latest and still does not work, please contact support@draytek.com

3.5G		
Brand	Module	Status
Alcatel	X500	Y
BandRich	Bandlux C321	Y

ZTE	ZTE MF636	Y

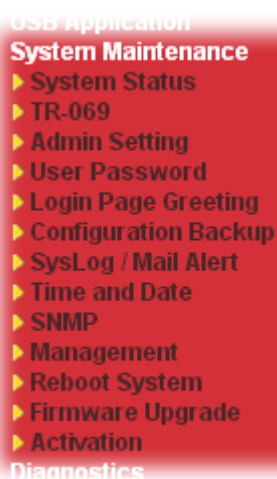

Y: Tested and is supported.

M: Has not been tested but might be supported.

## 3.18 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: Status, Administrator Password, Configuration Backup, Syslog, Time setup, Reboot System, Firmware Upgrade.

Below shows the menu items for System Maintenance.

### 3.18.1 System Status

The **System Status** provides basic network settings of Vigor router. It includes LAN and WAN interface information. Also, you could get the current running firmware version or firmware related information from this presentation.

#### System Status

**Model Name** : Vigor2850Vn  
**Firmware Version** : 3.6.6  
**Build Date/Time** : Nov 1 2013 15:35:29

LAN					
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	00-50-7F-E9-92-10	192.168.1.1	255.255.255.0	OFF	8.8.8.8
LAN2	00-50-7F-E9-92-10	192.168.2.1	255.255.255.0	ON	8.8.8.8
LAN3	00-50-7F-E9-92-10	192.168.3.1	255.255.255.0	ON	8.8.8.8
LAN4	00-50-7F-E9-92-10	192.168.4.1	255.255.255.0	ON	8.8.8.8
IP Routed Subnet	00-50-7F-E9-92-10	192.168.0.1	255.255.255.0	ON	8.8.8.8

Wireless LAN			
MAC Address	Frequency Domain	Firmware Version	SSID
00-50-7F-E9-92-10	Europe	"2.2.0.7"	DrayTek

WAN					
	Link Status	MAC Address	Connection	IP Address	Default Gateway
WAN1	Disconnected	00-50-7F-E9-92-11	---	---	---
WAN2	Disconnected	00-50-7F-E9-92-12	---	---	---
WAN3	Disconnected	00-50-7F-E9-92-13	---	---	---

IPv6		
Address	Scope	Internet Access Mode
LAN FE80::250:7FFF:FEE9:9210/64	Link	---

VoIP			
Port	Profile	Reg.	In/Out
Phone1		No	0/0
Phone2		No	0/0

Available settings are explained as follows:

Item	Description
<b>Model Name</b>	Display the model name of the router.
<b>Firmware Version</b>	Display the firmware version of the router.
<b>Build Date/Time</b>	Display the date and time of the current firmware build.

### 3.18.2 TR-069

This device supports TR-069 standard. It is very convenient for an administrator to manage a TR-069 device through an Auto Configuration Server, e.g., VigorACS.

System Maintenance >> TR-069 Setting

#### ACS and CPE Settings

<b>ACS Server On</b>	Internet ▼
<b>ACS Server</b>	
URL	<input type="text"/>
Username	<input type="text"/>
Password	<input type="password"/>
<b>CPE Client</b>	
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
URL	<input type="text" value="http://172.16.3.102:8069/cwm/CRN.html"/>
Port	<input type="text" value="8069"/>
Username	<input type="text" value="vigor"/>
Password	<input type="password"/>

#### Periodic Inform Settings

<input type="radio"/> Disable <input checked="" type="radio"/> Enable	
Interval Time	<input type="text" value="900"/> second(s)

#### STUN Settings

<input checked="" type="radio"/> Disable <input type="radio"/> Enable	
Server IP	<input type="text"/>
Server Port	<input type="text" value="3478"/>
Minimum Keep Alive Period	<input type="text" value="60"/> second(s)
Maximum Keep Alive Period	<input type="text" value="-1"/> second(s)

OK

Available settings are explained as follows:

Item	Description
ACS Server On	Choose the interface for the router connecting to ACS server.
ACS Server	<b>URL/Username/Password</b> – Such data must be typed according to the ACS (Auto Configuration Server) you want to link. Please refer to Auto Configuration Server user's manual for detailed information.
CPE Client	Such information is useful for Auto Configuration Server. <b>Enable/Disable</b> – Allow/Deny the CPE Client to connect with Auto Configuration Server. <b>Port</b> – Sometimes, port conflict might be occurred. To solve such problem, you might change port number for CPE.

<b>Periodic Inform Settings</b>	The default setting is <b>Enable</b> . Please set interval time or schedule time for the router to send notification to CPE. Or click <b>Disable</b> to close the mechanism of notification.
<b>STUN Settings</b>	<p>The default is <b>Disable</b>. If you click <b>Enable</b>, please type the relational settings listed below:</p> <p><b>Server IP</b> – Type the IP address of the STUN server.</p> <p><b>Server Port</b> – Type the port number of the STUN server.</p> <p><b>Minimum Keep Alive Period</b> – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the minimum period. The default setting is “60 seconds”.</p> <p><b>Maximum Keep Alive Period</b> – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the maximum period. A value of “-1” indicates that no maximum period is specified.</p>

### 3.18.3 Admin Setting

This page allows you to set new password.

[System Maintenance >> Admin Setting](#)

#### Administrator Password

Old Password	<input type="text"/>	
New Password	<input type="text"/>	(Max. 23 characters allowed)
Confirm Password	<input type="text"/>	(Max. 23 characters allowed)

Note: Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( )

#### Administrator Local User

☐ Local User

**Local User List**

Index	User Name
<div></div>	

**Specific User**

User Name:

Password:

Confirm Password:

☒ Enable 'Admin' Login From Wan

#### Administrator LDAP Setting

☐ Enable LDAP/AD login for Admin users

☒ Enable 'Admin' Login From Wan

**LDAP Server Profiles**

[LDAP Profile Setup](#)

Note: Please select 'Admin' from group select box on login UI.

Available settings are explained as follows:

Item	Description
<b>Administrator Password</b>	<b>Old Password</b> - Type in the old password. The factory default setting for password is “admin”. <b>New Password</b> -Type in new password in this field. The length of the password is limited to 23 characters. <b>Confirm Password</b> -Type in the new password again.
<b>Administrator Local User</b>	The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements. This feature allows other user in LAN who can access into the web user interface with the same privilege of the administrator. <b>Local User</b> – Check the box to enable the local user configuration. <b>Local User List</b> – It displays the username of the local user.

	<p><b>User Name</b> – Give a user name for the local user.</p> <p><b>Password</b> – Type the password for the local user.</p> <p><b>Confirm Password</b> – Type the password again for confirmation.</p> <p><b>Enable Admin Login From Wan</b> – The default setting is enabled. It can ensure any user accessing into web user interface of Vigor router through <b>Internet</b> by username/password of “admin/admin”.</p> <p><b>Add</b> – After typing the user name and password above, simply click it to create a new local user. The new one will be shown on the Local User List immediately.</p> <p><b>Edit</b> – If the username listed on the box above is not satisfied, simply click the username and modify it on the field of User Name. Later, click <b>Edit</b> to update the information.</p> <p><b>Delete</b> – If the local user listed on the box above is not satisfied, simply click the username and click <b>Delete</b> to remove it.</p>
<b>Administrator LDAP Setting</b>	<p><b>Enable LDAP/AD login for Admin users</b> – If it is enabled, any user can access into the web user interface of Vigor router through the LDAP server authentication.</p> <p><b>LDAP Server Profiles</b> – Available profiles will be displayed here under the link of LDAP Profile Setup.</p> <p><b>LDAP Profile Setup</b> – It allows you to create a new LDAP profile.</p>

When you click **OK**, the login window will appear. Please use the new password to access into the web configurator again.

### 3.18.4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

☐ Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="text"/>
Confirm Password	<input type="text"/>

Note: 1.Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( )  
2.Password can't be only \*.Example: '\*' or '\*\*' or '\*\*\*' is illegal, but '123\*' or '\*45' is OK.

OK

Available settings are explained as follows:

Item	Description
<b>Enable User Mode for simple web configuration</b>	After checking this box, you can access into the web configurator with the password typed here for simple web configuration.  The settings on simple web configurator will be different with full web configurator accessed by using the administrator password.
<b>Password</b>	Type in new password in this field.
<b>Confirm Password</b>	Type in the new password again.
<b>Set to Factory Default</b>	Click to return to the factory default setting.

When you click **OK**, the login window will appear. Please use the new password to access into the web configurator again.

Below shows an example for accessing into User Operation with User Password.

1. Open **System Maintenance>>User Password**.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Type a new password in the field of New Password and click **OK**.

System Maintenance >> User Password

☒ Enable User Mode for simple web configuration

User Password

| [Set to Factory Default](#) |

Password	<input type="password"/>
Confirm Password	<input type="password"/>

Note: Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( )

OK

3. The following screen will appear. Simply click **OK**.

System Maintenance >> User Password

Active Configuration

Password	: *****
----------	---------

4. Log out Vigor router Web Configurator.

5. The following window will be open to ask for username and password. Type the new user password in the field of **Password** and click **Login**.

A login window with a light gray background and rounded corners. It has two input fields: "Username" and "Password". The "Password" field is filled with black dots. To the right of the "Password" field is a "Login" button. At the bottom, there is a red banner with the text "Copyright©, DrayTek Corp. All Rights Reserved." and the "DrayTek" logo.

6. The main screen with User Mode will be shown as follows.

**Vigor2850 Series**  
VDSL2 Security Firewall

Auto Logout **IPv6**

**System Status**

Model Name : Vigor2850Vn

All Rights Reserved.

Settings to be configured in User Mode will be less than settings in Admin Mode. Only basic configuration settings will be available in User Mode. Setting in User Mode can be configured as same as in Admin Mode.

### 3.18.5 Login Page Greeting

When you want to access into the web configurator of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify background message and the heading on the Login window if you have such requirement.

System Maintenance >> Login Page Greeting

#### Login Page Greeting

☐ Enable

Login Page Title  (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:  

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>Message</p>
```

OK Cancel

Available settings are explained as follows:

Item	Description
------	-------------

<b>Enable</b>	Check this box to enable the login customization function.
<b>Login Page Title</b>	Type a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
<b>Welcome Message and Bulletin</b>	Type words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not type URL redirect link here.
<b>Preview</b>	Click it to display the preview of the login window based on the settings on this web page.
<b>Set to Factory Default</b>	Click to return to the factory default setting.

Below shows an example of login customization with the information typed in Login Description and Bulletin.

- 1. John, please pay your rent
- 2. Mary, please collect your electricity bill in the mailbox
- 3. Josh, couldn't manage to reach you but your parents were looking for you urgently

### 3.18.6 Configuration Backup

#### Backup the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

#### System Maintenance >> Configuration Backup

##### Configuration Backup / Restoration

<b>Restoration</b>	
Select a configuration file.	
<input type="text"/>	<input type="button" value="Browse.."/>
Click Restore to upload the file.	
<input type="button" value="Restore"/>	
<b>Backup</b>	
Click Backup to download current running configurations as a file.	
<input type="button" value="Backup"/>	<input type="button" value="Cancel"/>

2. Click **Backup** button to get into the following dialog. Click **Save** button to open another dialog for saving configuration as a file.

3. In **Save As** dialog, the default filename is **config.cfg**. You could give it another name by yourself.

4. Click **Save** button, the configuration will download automatically to your computer as a file named **config.cfg**.

The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

**Note:** Backup for Certification must be done independently. The Configuration Backup does not include information of Certificate.

## Restore Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

System Maintenance >> Configuration Backup

### Configuration Backup / Restoration

<b>Restoration</b>
Select a configuration file. <input type="text"/> <input type="button" value="Browse.."/>
Click Restore to upload the file. <input type="button" value="Restore"/>
<b>Backup</b>
Click Backup to download current running configurations as a file. <input type="button" value="Backup"/> <input type="button" value="Cancel"/>

2. Click **Browse** button to choose the correct configuration file for uploading to the router.
3. Click **Restore** button and wait for few seconds, the following picture will tell you that the restoration procedure is successful.

### 3.18.7 Syslog/Mail Alert

SysLog function is provided for users to monitor router. There is no bother to directly get into the Web Configurator of the router or borrow debug equipments.

[System Maintenance >> SysLog / Mail Alert Setup](#)

**SysLog / Mail Alert Setup**

**SysLog Access Setup**  
☐ Enable  
Syslog Save to:  
☒ Syslog Server  
☐ USB Disk  
**Router Name**   
Server IP Address   
Destination Port   
Mail Syslog ☐ Enable  
Enable syslog message:  
☒ Firewall Log  
☒ VPN Log  
☒ User Access Log  
☒ Call Log  
☒ WAN Log  
☒ Router/DSL information  
**AlertLog Setup**  
☐ Enable  
AlertLog Port

**Mail Alert Setup**  
☐ Enable   
SMTP Server   
SMTP Port   
Mail To   
Return-Path   
☐ Authentication  
User Name   
Password   
Enable E-Mail Alert:  
☒ DoS Attack  
☒ IM-P2P  
☒ VPN LOG

**Note:** 1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".  
2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.

Available settings are explained as follows:

Item	Description
<b>SysLog Access Setup</b>	<b>Enable</b> - Check <b>Enable</b> to activate function of syslog. <b>Syslog Save to</b> – Check <b>Syslog Server</b> to save the log to Syslog server. Check <b>USB Disk</b> to save the log to the attached USB storage disk.
<b>Router Name</b>	Display the name for such router configured in <b>System Maintenance&gt;&gt;Management</b> . If there is no name here, simply lick the link to access into <b>System Maintenance&gt;&gt;Management</b> to set the router name. <b>Server IP Address</b> -The IP address of the Syslog server. <b>Destination Port</b> - Assign a port for the Syslog protocol. <b>Mail Syslog</b> – Check the box to recode the mail event on Syslog. <b>Enable syslog message</b> - Check the box listed on this web page to send the corresponding message of firewall, VPN, User Access, Call, WAN, Router/DSL information to

	Syslog.
<b>AlertLog Setup</b>	<p>Check “<b>Enable</b>” to activate function of alert log.</p> <p><b>AlertLog Port</b> - Type the port number for alert log. The default setting is 514.</p>
<b>Mail Alert Setup</b>	<p>Check “<b>Enable</b>” to activate function of mail alert.</p> <p><b>Send a test e-mail</b> - Make a simple test for the e-mail address specified in this page. Please assign the mail address first and click this button to execute a test for verify the mail address is available or not.</p> <p><b>SMTP Server</b> - The IP address of the SMTP server.</p> <p><b>Mail To</b> - Assign a mail address for sending mails out.</p> <p><b>Return-Path</b> - Assign a path for receiving the mail from outside.</p> <p><b>Authentication</b> - Check this box to activate this function while using e-mail application.</p> <p><b>User Name</b> - Type the user name for authentication.</p> <p><b>Password</b> - Type the password for authentication.</p> <p><b>Enable E-mail Alert</b> - Check the box to send alert message to the e-mail box while the router detecting the item(s) you specify here.</p>

Click **OK** to save these settings.

For viewing the Syslog, please do the following:

1. Just set your monitor PC’s IP address in the field of Server IP Address
2. Install the Router Tools in the **Utility** within provided CD. After installation, click on the **Router Tools>>Syslog** from program menu.

3. From the Syslog screen, select the router you want to monitor. Be reminded that in **Network Information**, select the network adapter used to connect to the router. Otherwise, you won’t succeed in retrieving information from the router.

### 3.18.8 Time and Date

It allows you to specify where the time of the router should be inquired from.

System Maintenance >> Time and Date

**Time Information**

Current System Time

2010 Apr 2 Fri 9 : 1 : 58

Inquire Time

**Time Setup**

☐ Use Browser Time

☒ Use Internet Time Client

Server IP Address

pool.ntp.org

Time Zone

(GMT) Greenwich Mean Time : Dublin

Enable Daylight Saving

☐

Automatically Update Interval

30 min

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Current System Time</b>	Click <b>Inquire Time</b> to get the current time.
<b>Use Browser Time</b>	Select this option to use the browser time from the remote administrator PC host as router's system time.
<b>Use Internet Time</b>	Select to inquire time information from Time Server on the Internet using assigned protocol.
<b>Time Protocol</b>	Select a time protocol.
<b>Server IP Address</b>	Type the IP address of the time server.
<b>Time Zone</b>	Select the time zone where the router is located.
<b>Enable Daylight Saving</b>	Check the box to enable the daylight saving. Such feature is available for certain area.
<b>Automatically Update Interval</b>	Select a time interval for updating from the NTP server.

Click **OK** to save these settings.

### 3.18.9 SNMP

This page allows you to configure settings for SNMP and SNMPV3 services.

The SNMPv3 is **more secure than** SNMP through the encryption method (support AES and DES) and authentication method (support MD5 and SHA) for the management needs.

Applications >> SNMP

#### SNMP Setup

<input type="button" value="OK"/>	

Available settings are explained as follows:

Item	Description
------	-------------

<b>Management Access Control</b>	<p>Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p><b>Enable PING from the Internet</b> - Check the checkbox to enable all PING packets from the Internet. For security issue, this function is disabled by default.</p>
<b>Access List</b>	<p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p><b>IPv6 Address /Prefix Length</b>- Indicate the IP address(es) allowed to login to the router.</p>

### 3.18.11 Reboot System

The Web Configurator may be used to restart your router. Click **Reboot System** from **System Maintenance** to open the following page.

System Maintenance >> Reboot System

#### Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration  
☐ Using factory default configuration

Reboot Now

#### Auto Reboot Time Schedule

Index(1-15) in **Schedule** Setup: , , ,

**Note:** Action and Idle Timeout settings will be ignored.

OK

Cancel

**Index (1-15) in Schedule Setup** - You can type in four sets of time schedule for performing system reboot. All the schedules can be set previously in **Applications >> Schedule** web page and you can use the number that you have set in that web page.

If you want to reboot the router using the current configuration, check **Using current configuration** and click **Reboot Now**. To reset the router settings to default values, check **Using factory default configuration** and click **Reboot Now**. The router will take 5 seconds to reboot the system.

**Note:** When the system pops up Reboot System web page after you configure web settings, please click **Reboot Now** to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

### 3.18.12 Firmware Upgrade

Before upgrading your router firmware, you need to install the Router Tools. The **Firmware Upgrade Utility** is included in the tools. The following web page will guide you to upgrade firmware by using an example. Note that this example is running over Windows OS (Operating System).

Download the newest firmware from DrayTek's web site or FTP site. The DrayTek web site is [www.DrayTek.com](http://www.DrayTek.com) (or local DrayTek's web site) and FTP site is [ftp.DrayTek.com](ftp://DrayTek.com).

Click **System Maintenance>> Firmware Upgrade** to launch the Firmware Upgrade Utility.

#### System Maintenance >> Firmware Upgrade

##### Web Firmware Upgrade

Select a firmware file.

未選擇檔案

Click Upgrade to upload the file.

##### TFTP Firmware Upgrade from LAN

Current Firmware Version: 3.6.6

##### Firmware Upgrade Procedures:

1. Click "OK" to start the TFTP server.
2. Open the Firmware Upgrade Utility or other 3-party TFTP client software.
3. Check that the firmware filename is correct.
4. Click "Upgrade" on the Firmware Upgrade Utility to start the upgrade.
5. After the upgrade is complete, the TFTP server will automatically stop running.

Do you want to upgrade firmware ?

Click **OK**. The following screen will appear. Please execute the firmware upgrade utility first.

#### System Maintenance >> Firmware Upgrade

TFTP server is running. Please execute a Firmware Upgrade Utility software to upgrade router's firmware. This server will be closed by itself when the firmware upgrading finished.

For the detailed information about firmware update, please go to Chapter 5.

### 3.18.13 Activation

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

After you have finished the setting profiles for WCF (refer to **Web Content Filter Profile**), it is the time to activate the mechanism for your computer.

Click **System Maintenance>>Activation** to open the following page for accessing <http://myvigor.draytek.com>.

**Note that such service mechanism is powered by Commtouch.**

**System Maintenance >> Activation**Activate via interface : auto-selected ▼

**Web-Filter License**  
[Status:Not Activated]

[Activate](#)

Authentication Message

WebFilter, service not activate 2010-08-16 07:58:36

**Note:** If you want to use email alert or syslog, please configure the SysLog/Mail Alert Setup page.  
If you change the service provider, the configuration of the function will be reset.

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Activate via Interface</b>	Choose WAN interface used by such device for activating Web Content Filter.  <div>Activate via interface : auto-selected ▼ auto-selected WAN 1 WAN 2 WAN 3</div>
<b>Activate</b>	The <b>Activate</b> link brings you accessing into <a href="http://www.vigorpro.com">www.vigorpro.com</a> to finish the activation of the account and the router.
<b>Authentication Message</b>	As for authentication information of <b>web filter</b> , the process of authenticating will be displayed on this field for your reference.

Below shows the successful activation of Web Content Filter:

System Maintenance >> Activation

Activate via interface : auto-selected ▼

```

**Note:** If you want to use email alert or syslog, please configure the [SysLog/Mail Alert Setup](#) page.  
If you change the service provider, the configuration of the function will be reset.

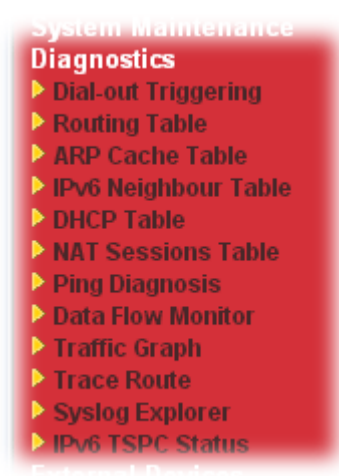

OK

Cancel

## 3.19 Diagnostics

Diagnostic Tools provide a useful way to **view** or **diagnose** the status of your Vigor router.

Below shows the menu items for Diagnostics.

### 3.19.1 Dial-out Triggering

Click **Diagnostics** and click **Dial-out Trigger** to open the web page. The internet connection (e.g., PPPoE) is triggered by a package sending from the source IP address.

Diagnostics >> Dial-out Triggering

Dial-out Triggered Packet Header

| [Refresh](#) |

**HEX Format:**

Available settings are explained as follows:

Item	Description
Time	Display the time of the event occurred.
Log Type	Display the type of the record.
Message	Display the information for each event.

### 3.19.12 TSPC Status

IPv6 TSPC status web page could help you to diagnose the connection status of TSPC.

If TSPC has configured properly, the router will display the following page when the user connects to tunnel broker successfully.

[Diagnostics >> TSPC Status](#)

WAN1	WAN2	WAN3	<a href="#">Refresh</a>
<b>TSPC Enabled</b>			
<b>TSPC Connection Status</b>			
Local Endpoint v4 Address :		1.169.155.138	
Local Endpoint v6 Address :		2001:05c0:1400:000b:0000:0000:0000:b527	
Router DNS name :		vigor2850.broker.freenet6.net	
Remote Endpoint v4 Address :		81.171.72.11	
Remote Endpoint v6 Address :		2001:05c0:1400:000b:0000:0000:0000:b526	
Tspc Prefix :		2001:05c0:1513:5900:0000:0000:0000:0000	
Tspc Prefixlen :		56	
Tunnel Broker :		amsterdam.freenet6.net	
Tunnel Status :		Connected	

Available settings are explained as follows:

Item	Description
Refresh	Click this link to refresh this page manually.

## 3.20 External Devices

This page allows you to enable or disable the function of detecting external devices.

### External Devices

---

☐ External Device Auto Discovery

### External Devices Connected

Below shows available devices that connected externally:

#### For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device device properly. Click the **Clear** button to Clear the off-line information and account information.

OK

Available settings are explained as follows:

Item	Description
<b>External Device Auto Discovery</b>	Check this box to detect the external device automatically and display on this page.

This page is left blank.

# 4

## Application and Examples

### 4.1 How to configure settings for IPv6 Service in Vigor2850

Due to the shortage of IPv4 address, more and more countries use IPv6 to solve the problem. However, to continually use the original rich resources of IPv4, both IPv6 and IPv4 networks shall communicate for each other via intercommunication mechanism to complete the shifting job from IPv4 to IPv6 gradually. At present, there are three common types of intercommunication mechanisms:

- **Dual Stack**

The user can use both IPv4 and IPv6 techniques at the same time. That means adding an IPv6 stack on the origin network layer to let the host own the communication capability of IPv4 and IPv6.

- **Tunnel**

Both IPv6 hosts can communication for each other via existing IPv4 network environment. The IPv6 packets will be encapsulated with the header of IPv4 first. Later, the packets will be transformed and judged by IPv4 router. Once the packets arrive the border between IPv4 and IPv6, the header of IPv4 on the packets will be removed. Then, the packets with IPv6 address will be forwarded to the destination of IPv6 network.

- **Translation**

Such feature is active only for the user who uses IPv4 to communicate with other user using IPv4 service.

Before configuring the settings on Vigor2850, you need to know which connection type that your IPv6 service used.

**Note:** For the IPv6 service, you have to configure WAN/LAN settings before using the service.

#### I. Configuring the WAN Settings

For the IPv6 WAN settings for Vigor2850, there are five connection types to be chosen: PPP, TSPC, AICCU, DHCPv6 Client and Static IPv6.

1. Access into the web configurator of Vigor2850. Open **WAN>> Internet Access**. Choose one of the WAN interfaces as the one supporting IPv6 service. Then, click the IPv6 button of the selected WAN.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		ADSL / VDSL	PPPoE / PPPoA	Details Page	IPv6
WAN2		Ethernet	PPPoE	Details Page	IPv6
WAN3		USB	None	Details Page	IPv6

Note : Only one WAN can support IPv6.

**Note:** Only one WAN interface support IPv6 service at one time. In this example, WAN2 is chosen as the one supporting IPv6 service.

2. In the following figure, use the drop down list to choose a proper connection type.

WAN >> Internet Access

WAN 2

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b>			
Connection Type		<div>Offline Offline PPP TSPC AICCU DHCPv6 Client Static IPv6</div>	
<div>OK</div>			

Different connection types will bring out different configuration page. Refer to the following:

- **PPP – Dual Stack application, IPv4 and IPv6 services can be utilized at the same time**

Choose PPP and type the information for PPPoE of IPv4.

WAN >> Internet Access

WAN 2

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<div><input checked="" type="radio"/> Enable <input type="radio"/> Disable</div>			
<b>ISP Access Setup</b>		<b>PPP/MP Setup</b>	
Username: 73768635@hinet.net		PPP Authentication: PAP or CHAP	
Password: .....		Idle Timeout: -1 second(s)	
Index(1-15) in <u>Schedule</u> Setup: => , , ,		<b>IP Address Assignment Method (IPCP)</b>	
<b>WAN Connection Detection</b>		WAN IP Alias	
Mode: ARP Detect		Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)	
Ping IP:		Fixed IP Address:	
TTL:		<input checked="" type="radio"/> Default MAC Address	
		<input type="radio"/> Specify a MAC Address	
		MAC Address: 00 . 50 . 7F . EA . 7E . E2	
<div>OK Cancel</div>			

Access into the setting page for IPv6 service, it is not necessary for you to configure anything.

WAN >> Internet Access

WAN 2

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b>			
Connection Type		PPP	
<b>Note :</b> IPv4 WAN setting should be PPPoE client.			
<div>OK Cancel</div>			

Click **OK** and open **Online Status**. If the connection is successful, you will get the IP address for IPv4 and IPv6 at the same time.

#### Online Status

Physical Connection					System Uptime: 0:5:35

## II. Configuring the LAN Settings

After finished the WAN settings for IPv6, please configure the LAN settings to make the router's client getting the IPv6 address.

1. Access into the web configurator of Viogr2850. Open **LAN>> General Setup**. Click the **IPv6** button.

**Note:** Only the subnet of **LAN1** supports IPv6 feature.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup      LAN 1 IPv6 Setup

**RADVD Configuration**

☒ Enable    ☐ Disable

Advertisement Lifetime  Seconds (Range : 600 - 9000)

**DHCPv6 Server Configuration**

☒ Enable Server    ☐ Disable Server

Start IPv6 Address

End IPv6 Address

**DNS Server IPv6 Address**

Primary DNS Server

Secondary DNS Server

**Static IPv6 Address configuration**

IPv6 Address  / Prefix Length

**Current IPv6 Address Table**

Index	IPv6 Address/Prefix Length	Scope
1	2001:4DD0:FF00:8805:250:7FFF:FEEA:7EE0/64	Global
2	FE80::250:7FFF:FEEA:7EE0/64	Link

2. In the field of **RADVD Configuration**, the default setting is **Enable**. The client's PC will ask RADVD service for the Prefix of IPv6 address automatically, and generate an Interface ID by itself to compose a full and unique IPv6 address.
3. In the field of **HCPv6 Server Configuration**, when DHCPv6 service is enabled, you can assign available IPv6 address for the client manually.

**Note:** When both mechanisms are enabled, the client can determine which mechanism to be used (e.g., the default mechanism for Windows7 is RADVD).

### III. Confirming IPv6 Service Run Successfully

1. Make sure you have get the correct IPv6 IP address. Get into MS-DOS interface and type the command of “ipconfig”. Refer to the following figure.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ipconfig

Windows IP Configuration

Ethernet adapter Test Line 5:

    Connection-specific DNS Suffix  . : 
    IP Address. . . . . : 192.168.1.10
    Subnet Mask . . . . . : 255.255.255.0
    IP Address. . . . . : 2001:4dd0:ff00:8805:b8bf:5d0c:c76b:9b93
    IP Address. . . . . : 2001:4dd0:ff00:8805:211:95ff:fe83:e1bc
    IP Address. . . . . : fe80::211:95ff:fe83:e1bc%4
    Default Gateway . . . . . : 192.168.1.1
                                fe80::250:7fff:feea:7ee0%4

Ethernet adapter DrayTek Virtual Interface:

    Media State . . . . . : Media disconnected
```

From the above figure we can see IPv6 IP address has been captured by the system.

2. Use the Ping command to ping any IPv6 address indicating an IPv6 website. For example, [www.kame.net](http://www.kame.net) is a website supporting IPv4 IP and IPv6 IP services. Its IPv6 address is seen with a format of 2001:200:dff:fff1:216:3eff:feb1:44d7.

```
C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\Owner>ping 2001:200:dff:fff1:216:3eff:feb1:44d7

Pinging 2001:200:dff:fff1:216:3eff:feb1:44d7 with 32 bytes of data:

Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=743ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=623ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=626ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=617ms

Ping statistics for 2001:200:dff:fff1:216:3eff:feb1:44d7:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 617ms, Maximum = 743ms, Average = 652ms

C:\Documents and Settings\Owner>
```

After getting the above message, it means the IPv6 service has been activated successfully.

3. Connect to the website for IPv6. Open a web browser and type an URL of IPv6, e.g., [www.kame.net](http://www.kame.net). If your computer accesses into the website by using IPv6 address, you may see a turtle dancing on the screen. If not, only a steady turtle will be seen.

If you can see a turtle dancing on the screen, that means IPv6 service is ready for you to access and utilize.

## 4.2 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening **USB Application>>File Explorer**. If it is necessary for you to delete, copy files on the device or write, paste files to the device, it must be done through SAMBA server or FTP server.

Samba service is based on the original USB FTP service. You will need to setup USB FTP first. We would like to give brief instructions on USB FTP setup here.

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

### USB Application >> USB Disk Status

#### USB Mass Storage Device Status

Connection Status: **Disk Connected**

Disconnect USB Disk

Write Protect Status: **NO**

Disk Capacity: 2009 MB

#### USB Disk Users Connected

| Refresh |

Index	Service	IP Address(Port)	Username
-------	---------	------------------	----------

**Note:** If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

2. Then, please open **USB Application >> USB General Settings** to enable Samba service.

### USB Application >> USB General Settings

#### USB General Settings

##### General Settings

Simultaneous FTP Connections  (Maximum 6)

Default Charset

##### Samba Service Settings(Network Neighborhood)

☒ Enable ☐ Disable

##### Access Mode

☒ LAN Only ☐ LAN And WAN

##### NetBios Name Service

Workgroup Name

Host Name

**Note:** 1. If Charset is set to "default", only English long file name is supported.  
2. Multi-session ftp download will be banned by Router FTP server. If your ftp client have multi-connection mechanism, such as FileZilla, you may limit client connections setting to 1 to get better performance.  
3. A workgroup name must not be the same as the host name. The workgroup name and the host name can have as many as 15 characters and a host name can have as many as 23 characters, but both cannot contain any of the following: . ; : " < > \* + = / \ | ?.

OK

3. Setup a user account for the FTP service by using **USB Application >>USB User Management**. Click **Enable** to enable FTP/Samba User account. Here we add a new account "user1" and assign authorities "Read", "Write" and "List" to it.

## USB Application >> USB User Management

### Profile Index: 1

FTP/Samba User	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text" value="user1"/>
Password	<input type="password"/> (Maximum 11 Characters)
Confirm Password	<input type="password"/>
Home Folder	<input type="text"/>
<b>Access Rule</b>	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input checked="" type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

**Note:** The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - \_ @ ~ ` ! ( ) / and space.

OK Clear Cancel

- Click **OK** to save the configuration.
- Make sure the FTP service is running properly. Please open a browser and type <ftp://192.168.1.1>. Use the account "**user1**" to login.

**Log On As**

Either the server does not allow anonymous logins or the e-mail address was not accepted.

FTP server: 192.168.1.1

User name:

Password:

After you log on, you can add this server to your Favorites and return to it easily.

FTP does not encrypt or encode passwords or data before sending them to the server. To protect the security of your passwords and data, use Web Folders (WebDAV) instead.

Learn more about [using Web Folders](#).

☐ Log on anonymously ☒ Save password

Log On Cancel

6. When the following screen appears, it means the FTP service is running properly.

7. Return to **USB Application >> USB Disk Status**. The information for FTP server will be shown as below.

**USB Application >> USB Disk Status**

**USB Mass Storage Device Status**

Connection Status: **Disk Connected**

[Disconnect USB Disk](#)

Write Protect Status: **No**

Disk Capacity: 2009 MB

Free Capacity: 0 MB [Refresh](#)

**USB Disk Users Connected**

[Refresh](#)

Index	Service	IP Address(Port)	Username	
1.	FTP	192.168.1.10(1963)	user1	<a href="#">Drop</a>

**Note:** If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Now, users in LAN of Vigor2850 can access into the USB storage device by typing ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

## 4.3 Create a LAN-to-LAN Connection Between Remote Office and Headquarter

The most common case is that you may want to connect to network securely, such as the remote branch office and headquarter. According to the network structure as shown in the below illustration, you may follow the steps to create a LAN-to-LAN profile. These two networks (LANs) should NOT have the same network address.

### Settings in Router A in headquarter:

1. Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
2. Then,  
For using **PPP** based services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

#### VPN and Remote Access >> PPP General Setup

##### PPP General Setup

<b>PPP/MP Protocol</b>	
Dial-In PPP Authentication	PAP or CHAP
Dial-In PPP Encryption (MPPE)	Optional MPPE
Mutual Authentication (PAP)	<input type="radio"/> Yes <input checked="" type="radio"/> No
Username	
Password	
<b>IP Address Assignment for Dial-In Users (When DHCP Disable set)</b>	
Assigned IP range	192.168.1.200

OK

For using **IPSec**-based service, such as IPSec or L2TP with IPSec Policy, you have to set general settings in **IPSec General Setup**, such as the pre-shared key that both parties have known.

#### VPN and Remote Access >> IPSec General Setup

##### VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

<b>IKE Authentication Method</b>	
Pre-Shared Key	<input type="password" value="•••••"/>
Confirm Pre-Shared Key	<input type="password" value="•••••"/>
<b>IPSec Security Method</b>	
<input checked="" type="checkbox"/> Medium (AH) Data will be authentic, but will not be encrypted.	
High (ESP)	<input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES Data will be encrypted and authentic.
<input type="button" value="OK"/> <input type="button" value="Cancel"/>	

3. Go to **LAN-to-LAN**. Click on one index number to edit a profile.
4. Set **Common Settings** as shown below. You should enable both of VPN connections because any one of the parties may start the VPN connection.

#### VPN and Remote Access >> LAN to LAN

##### Profile Index : 1

##### 1. Common Settings

Profile Name <input type="text" value="Branch 1"/>	Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in
<input type="checkbox"/> Enable this profile	<input type="checkbox"/> Always on
VPN Dial-Out Through <input type="text" value="WAN1 First"/>	Idle Timeout <input type="text" value="300"/> second(s)
Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block	<input type="checkbox"/> Enable PING to keep alive
	PING to the IP <input type="text"/>

5. Set **Dial-Out Settings** as shown below to dial to connect to Router B aggressively with the selected Dial-Out method.

If an **IPSec-based** service is selected, you should further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-Out connection.

**2. Dial-Out Settings**

<b>Type of Server I am calling</b> <input type="radio"/> PPTP <input checked="" type="radio"/> IPSec Tunnel <input type="radio"/> L2TP with IPSec Policy <span>None</span>  Dial Number for ISDN or Server IP/Host Name for VPN. (such as 5551234, draytek.com or 123.45.67.89) <input type="text" value="220.135.240.210"/>	<b>Link Type</b> <span>64k bps</span> <b>Username</b> <input type="text" value="???"/> <b>Password</b> <input type="text"/> <b>PPP Authentication</b> <span>PAP/CHAP</span> <b>VJ Compression</b> <input checked="" type="radio"/> On <input type="radio"/> Off  <b>IKE Authentication Method</b> <input checked="" type="radio"/> Pre-Shared Key <span>IKE Pre-Shared Key</span> <input type="text"/> <input type="radio"/> Digital Signature(X.509) <span>None</span>  <b>IPSec Security Method</b> <input checked="" type="radio"/> Medium(AH) <input type="radio"/> High(ESP) <span>DES without Authentication</span> <span>Advanced</span>  <b>Index(1-15) in <a href="#">Schedule</a> Setup:</b> <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>
--	--

If a **PPP-based service** is selected, you should further specify the remote peer IP Address, Username, Password, PPP Authentication and VJ Compression for this Dial-Out connection.

**2. Dial-Out Settings**

<b>Type of Server I am calling</b> <input checked="" type="radio"/> PPTP <input type="radio"/> IPSec Tunnel <input type="radio"/> L2TP with IPSec Policy <span>None</span>  Dial Number for ISDN or Server IP/Host Name for VPN. (such as 5551234, draytek.com or 123.45.67.89) <input type="text" value="220.135.240.210"/>	<b>Link Type</b> <span>64k bps</span> <b>Username</b> <input type="text" value="draytek"/> <b>Password</b> <input type="text" value="...."/> <b>PPP Authentication</b> <span>PAP/CHAP</span> <b>VJ Compression</b> <input checked="" type="radio"/> On <input type="radio"/> Off  <b>IKE Authentication Method</b> <input checked="" type="radio"/> Pre-Shared Key <span>IKE Pre-Shared Key</span> <input type="text"/> <input type="radio"/> Digital Signature(X.509) <span>None</span>  <b>IPSec Security Method</b> <input checked="" type="radio"/> Medium(AH) <input type="radio"/> High(ESP) <span>DES without Authentication</span> <span>Advanced</span>  <b>Index(1-15) in <a href="#">Schedule</a> Setup:</b> <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>
--	---

6. Set **Dial-In settings** to as shown below to allow Router B dial-in to build VPN connection.

If an **IPSec-based** service is selected, you may further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-In connection. Otherwise, it will apply the settings defined in **IPSec General Setup** above.

### 3. Dial-In Settings

<b>Allowed Dial-In Type</b>	
<input type="checkbox"/> PPTP	Username <input data-bbox="1182 495 1414 528" type="text" value="???"/>

<input checked="" type="checkbox"/> Medium(AH)	
High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES	

- At last, set the remote network IP/subnet in **TCP/IP Network Settings** so that Router A can direct the packets destined to the remote network to Router B via the VPN connection.

#### 4. TCP/IP Network Settings

My WAN IP	<input type="text" value="0.0.0.0"/>	RIP Direction	<input type="button" value="Disable"/>
Remote Gateway IP	<input type="text" value="0.0.0.0"/>	From first subnet to remote network, you have to do	
Remote Network IP	<input type="text" value="192.168.2.0"/>		<input type="button" value="Route"/>
Remote Network Mask	<input type="text" value="255.255.255.0"/>		
Local Network IP	<input type="text" value="192.168.1.1"/>	<input type="checkbox"/> Change default route to this VPN tunnel ( Only single WAN supports this )	
Local Network Mask	<input type="text" value="255.255.255.0"/>		
	<input type="button" value="More"/>		

#### Settings in Router B in the remote office:

- Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
- Then, for using **PPP based** services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

#### VPN and Remote Access >> PPP General Setup

##### PPP General Setup

<b>PPP/MP Protocol</b>		<b>IP Address Assignment for Dial-In Users (When DHCP Disable set)</b>
Dial-In PPP Authentication	<input type="button" value="PAP or CHAP"/>	Assigned IP range
Dial-In PPP Encryption (MPPE)	<input type="button" value="Optional MPPE"/>	<input type="text" value="192.168.2.200"/>
Mutual Authentication (PAP)	<input type="radio"/> Yes <input checked="" type="radio"/> No	
Username	<input type="text"/>	
Password	<input type="text"/>	

For using **IPSec-based** service, such as IPSec or L2TP with IPSec Policy, you have to set general settings in **IPSec General Setup**, such as the pre-shared key that both parties have known.

#### VPN and Remote Access >> IPSec General Setup

##### VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

<b>IKE Authentication Method</b>	
Pre-Shared Key	<input type="text" value="....."/>
Confirm Pre-Shared Key	<input type="text" value="....."/>
<b>IPSec Security Method</b>	
<input checked="" type="checkbox"/> Medium (AH)	Data will be authentic, but will not be encrypted.
High (ESP)	<input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES
	Data will be encrypted and authentic.

- Go to **LAN-to-LAN**. Click on one index number to edit a profile.
- Set **Common Settings** as shown below. You should enable both of VPN connections because any one of the parties may start the VPN connection.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

1. Common Settings

Profile Name <input type="text" value="Branch 1"/> <input type="checkbox"/> Enable this profile VPN Dial-Out Through <input type="text" value="WAN1 First"/> Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block	Call Direction <input checked="" type="radio"/> Both <input type="radio"/> Dial-Out <input type="radio"/> Dial-in <input type="checkbox"/> Always on Idle Timeout <input type="text" value="300"/> second(s) <input type="checkbox"/> Enable PING to keep alive PING to the IP <input type="text"/>
---	---

- Set **Dial-Out Settings** as shown below to dial to connect to Router B aggressively with the selected Dial-Out method.

If an **IPSec-based** service is selected, you should further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-Out connection.

2. Dial-Out Settings

<b>Type of Server I am calling</b> <input type="radio"/> PPTP <input checked="" type="radio"/> IPSec Tunnel <input type="radio"/> L2TP with IPSec Policy <input type="text" value="None"/>	Link Type <input type="text" value="64k bps"/> Username <input type="text" value="???"/> Password <input type="text"/> PPP Authentication <input type="text" value="PAP/CHAP"/> VJ Compression <input checked="" type="radio"/> On <input type="radio"/> Off
Dial Number for ISDN or Server IP/Host Name for VPN. ## 4.4 Create a Remote Dial-in User Connection Between the Teleworker and Headquarter

The other common case is that you, as a teleworker, may want to connect to the enterprise network securely. According to the network structure as shown in the below illustration, you may follow the steps to create a Remote User Profile and install Smart VPN Client on the remote host.

### Settings in VPN Router in the enterprise office:

1. Go to **VPN and Remote Access** and select **Remote Access Control** to enable the necessary VPN service and click **OK**.
2. Then, for using PPP based services, such as PPTP, L2TP, you have to set general settings in **PPP General Setup**.

#### VPN and Remote Access >> PPP General Setup

##### PPP General Setup

<b>PPP/MP Protocol</b>	
Dial-In PPP Authentication	PAP or CHAP
Dial-In PPP Encryption (MPPE)	Optional MPPE
Mutual Authentication (PAP)	<input type="radio"/> Yes <input checked="" type="radio"/> No
Username	
Password	
<b>IP Address Assignment for Dial-In Users (When DHCP Disable set)</b>	
Assigned IP range	192.168.1.200

OK

For using IPSec-based service, such as IPSec or L2TP with IPSec Policy, you have to set general settings in **IKE/IPSec General Setup**, such as the pre-shared key that both parties have known.

## VPN and Remote Access >> IPSec General Setup

### VPN IKE/IPSec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

<b>IKE Authentication Method</b>	
Pre-Shared Key	.....
Confirm Pre-Shared Key	.....
<b>IPSec Security Method</b>	
<input checked="" type="checkbox"/> Medium (AH) Data will be authentic, but will not be encrypted.	
High (ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES Data will be encrypted and authentic.	
OK    Cancel	

3. Go to **Remote Dial-In User**. Click on one index number to edit a profile.
4. Set **Dial-In** settings to as shown below to allow the remote user dial-in to build VPN connection.

If an **IPSec-based** service is selected, you may further specify the remote peer IP Address, IKE Authentication Method and IPSec Security Method for this Dial-In connection. Otherwise, it will apply the settings defined in **IPSec General Setup** above.

## VPN and Remote Access >> Remote Dial-in User

### Index No. 1

<b>User account and Authentication</b>	Username	???

OK Clear Cancel

#### Settings in the remote host:

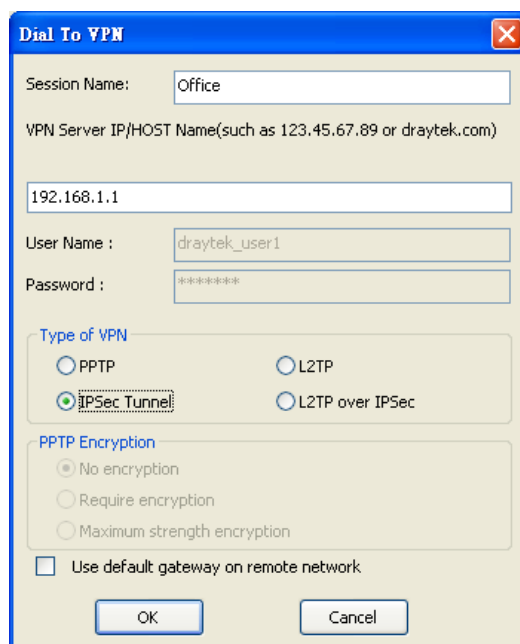

- For Win98/ME, you may use "Dial-up Networking" to create the PPTP tunnel to Vigor router. For Win2000/XP, please use "Network and Dial-up connections" or "Smart VPN Client", complimentary software to help you create PPTP, L2TP, and L2TP over IPSec tunnel. You can find it in CD-ROM in the package or go to [www.DrayTek.com](http://www.DrayTek.com) download center. Install as instructed.
- After successful installation, for the first time user, you should click on the **Step 0. Configure** button. Reboot the host.

- In **Step 2. Connect to VPN Server**, click **Insert** button to add a new entry.

If an IPSec-based service is selected as shown below,

**Dial To VPN**

Session Name: Office

VPN Server IP/HOST Name(such as 123.45.67.89 or draytek.com)

192.168.1.1

User Name : draytek\_user1

Password : \*\*\*\*\*

Type of VPN

☐ PPTP ☐ L2TP

☒ IPsec Tunnel ☐ L2TP over IPsec

PPTP Encryption

☒ No encryption

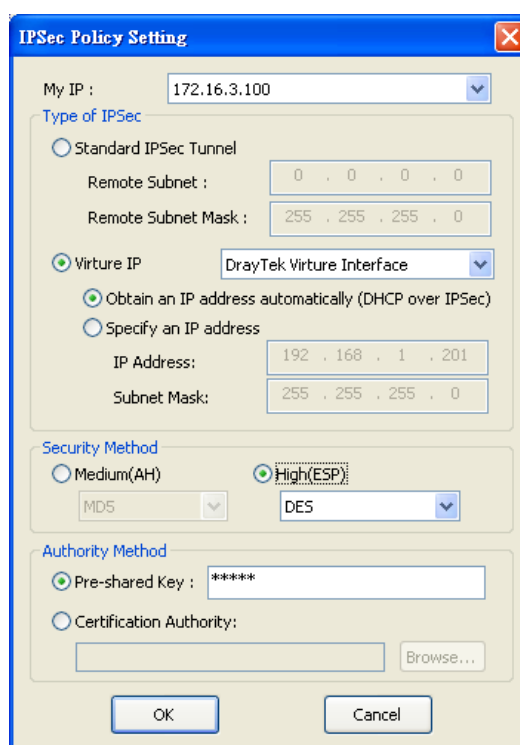

☐ Require encryption

☐ Maximum strength encryption

☐ Use default gateway on remote network

OK Cancel

You may further specify the method you use to get IP, the security method, and authentication method. If the Pre-Shared Key is selected, it should be consistent with the one set in VPN router.

**IPSec Policy Setting**

My IP : 172.16.3.100

Type of IPSec

☐ Standard IPSec Tunnel

Remote Subnet : 0 . 0 . 0 . 0

Remote Subnet Mask : 255 . 255 . 255 . 0

☒ Virture IP

DrayTek Virture Interface

☒ Obtain an IP address automatically (DHCP over IPSec)

☐ Specify an IP address

IP Address: 192 . 168 . 1 . 201

Subnet Mask: 255 . 255 . 255 . 0

Security Method

☐ Medium(AH)

☒ High(ESP)

MD5 DES

Authority Method

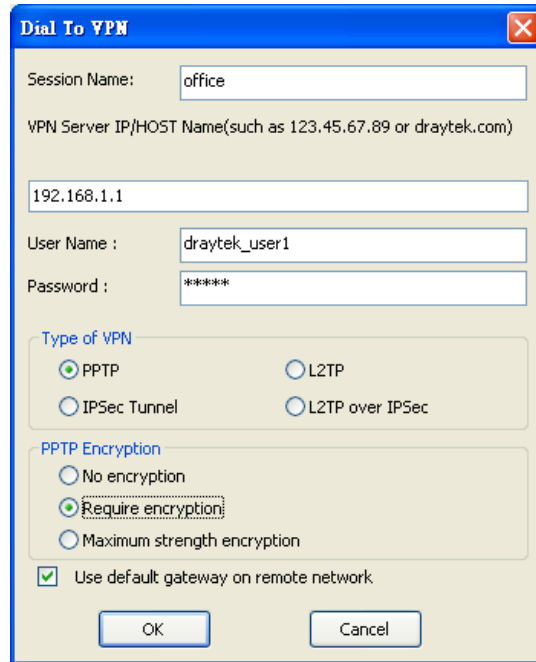

☒ Pre-shared Key : \*\*\*\*\*

☐ Certification Authority:

Browse...

OK Cancel

If a PPP-based service is selected, you should further specify the remote VPN server IP address, Username, Password, and encryption method. The User Name and Password should be consistent with the one set up in the VPN router. To use default gateway on remote network means that all the packets of remote host will be directed to VPN server then forwarded to Internet. This will make the remote host seem to be working in the enterprise network.

The image shows a 'Dial To VPN' configuration window. It has a blue title bar with a close button. The window contains the following fields and options:

- Session Name:** A text box containing 'office'.
- VPN Server IP/HOST Name(such as 123.45.67.89 or draytek.com):** A text box containing '192.168.1.1'.
- User Name :** A text box containing 'draytek\_user1'.
- Password :** A text box containing '\*\*\*\*\*'.
- Type of VPN:** A group box containing four radio buttons:
  - ☒ PPTP
  - ☐ L2TP
  - ☐ IPsec Tunnel
  - ☐ L2TP over IPsec
- PPTP Encryption:** A group box containing three radio buttons:
  - ☐ No encryption
  - ☒ Require encryption
  - ☐ Maximum strength encryption
- ☒ Use default gateway on remote network.
- At the bottom are **OK** and **Cancel** buttons.

- Click **Connect** button to build connection. When the connection is successful, you will find a green light on the right down corner.

## 4.5 QoS Setting Example

Assume a teleworker sometimes works at home and takes care of children. When working time, he would use Vigor router at home to connect to the server in the headquarter office downtown via either HTTPS or VPN to check email and access internal database. Meanwhile, children may chat on Skype in the restroom.

- Go to **Bandwidth Management>>Quality of Service**.

Bandwidth Management >> Quality of Service

General Setup									Set to Factory Default	
Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics	
WAN1	Enable	--Kbps/--Kbps	Outbound	25%	25%	25%	25%	Inactive	<a href="#">Status</a>	<a href="#">Setup</a>
WAN2	Enable	10000Kbps/10000Kbps	Outbound	25%	25%	25%	25%	Inactive	<a href="#">Status</a>	<a href="#">Setup</a>
WAN3	Disable	10000Kbps/10000Kbps		25%	25%	25%	25%	Inactive	Status	<a href="#">Setup</a>

Class Rule			
Index	Name	Rule	Service Type
Class 1		<a href="#">Edit</a>	<a href="#">Edit</a>
Class 2		<a href="#">Edit</a>	
Class 3		<a href="#">Edit</a>	

- Click **Setup** link of WAN(1/2/3). Make sure the QoS Control on the left corner is checked. And select **BOTH** in **Direction**.

## Bandwidth Management >> Quality of Service

### WAN2 General Setup

☒ **Enable the QoS Control** OUT

Add Edit Delete

OK Cancel

11. Click **Add** to open the following window. Check the **ACT** box, first.

Bandwidth Management >> Quality of Service

Rule Edit

<input checked="" type="checkbox"/> ACT		
Local Address	<input type="text" value="Any"/>	<input type="button" value="Edit"/>
Remote Address	<input type="text" value="Any"/>	<input type="button" value="Edit"/>
DiffServ CodePoint	<input type="text" value="IP precedence 4"/>	<input type="button" value="v"/>
Service Type	<input type="text" value="SYSLOG(UDP:514)"/>	<input type="button" value="v"/>
<b>Note:</b> Please choose/setup the <u>Service Type</u> first.		
<input type="button" value="OK"/> <input type="button" value="Cancel"/>		

12. Then click **Edit** of **Local Address** to set a worker's subnet address. Click **Edit** of **Remote Address** to set headquarter's IP address. Leave other fields and click **OK**.

## 4.6 Upgrade Firmware for Your Router

### Using Firmware Upgrade Utility

Before upgrading your router firmware, you need to install the Router Tools. The **Firmware Upgrade Utility** is included in the tools.

1. Go to [www.DrayTek.com](http://www.DrayTek.com).
2. Access into **Support >> Downloads**. Please find out **Firmware** menu and click it. Search the model you have and click on it to download the newly update firmware for your router.

Model Name	Firmware Version	Release Date
Vigor120 series	3.2.2.1	26/06/2009
Vigor2100 series	2.6.2	26/02/2008
Vigor2104 series	2.5.7.3	13/02/2008
Vigor2110 series	3.3.0	25/06/2009
Vigor2200/X/W/E	2.3.11	22/09/2004
Vigor2200Eplus	2.5.7	18/02/2009
Vigor2200USB	2.3.10	16/03/2005

3. Access into **Support >> Downloads**. Please find out **Utility** menu and click it.

Tools Name	Release Date	Version	OS	Support Model
Router Tools	2009/06/18	4.2.0	MS-Windows	All Modules
Syslog Tools	2009/06/18	4.2.0	MS-Windows XP MS-Vista	All Modules
VigorPro Alert Notice Tools	2009/06/03	1.1.0 ( Multi-language )	MS-Windows XP MS-Vista	VigorPro 100 series VigorPro 5500 series VigorPro 5510 series VigorPro 5300 series
Smart VPN Client	2009/05/25	3.6.3 ( Multi-language )	MS-Windows XP MS-Vista	All Modules
Smart Monitor	2009/03/25	2.0	MS-Windows XP	Vigor2950 series VigorPro 5510 series

4. Click on the link of **Router Tools** to download the file. After downloading the files, please decompressed the file onto your host.

5. Double click on the icon of router tool. The setup wizard will appear.

6. Follow the onscreen instructions to install the tool. Finally, click **Finish** to end the installation.
7. From the **Start** menu, open **Programs** and choose **Router Tools XXX >> Firmware Upgrade Utility**.

8. Type in your router IP, usually **192.168.1.1**.
9. Click the button to the right side of Firmware file typing box. Locate the files that you download from the company web sites. You will find out two files with different extension names, **xxxx.all** (keep the old custom settings) and **xxxx.rst** (reset all the custom settings to default settings). Choose any one of them that you need.

10. Click **Send**.

11. Now the firmware update is finished.

## Using Web Page

The web page also can guide you to upgrade firmware. Note that this example is running over Windows OS (Operating System).

1. Download the newest firmware from DrayTek's web site or FTP site. The DrayTek web site is [www.DrayTek.com](http://www.DrayTek.com) (or local DrayTek's web site) and FTP site is <ftp.DrayTek.com>.
2. Click **System Maintenance>> Firmware Upgrade**.

### System Maintenance >> Firmware Upgrade

#### Web Firmware Upgrade

Select a firmware file.

Click Upgrade to upload the file.

#### TFTP Firmware Upgrade from LAN

Current Firmware Version: 3.3.6\_RC4

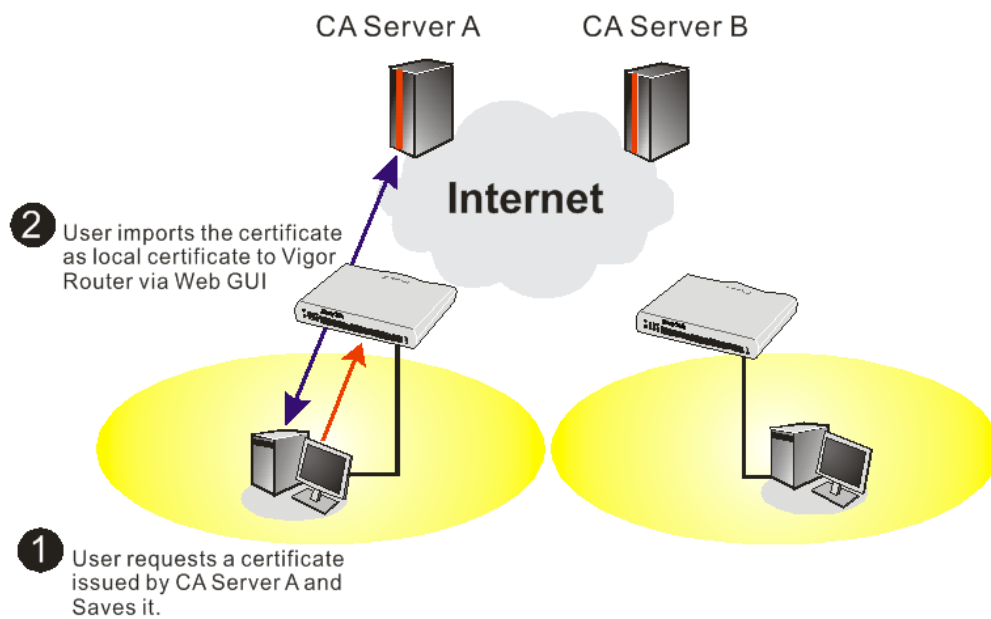

**Firmware Upgrade Procedures:**

1. Click "OK" to start the TFTP server.
2. Open the Firmware Upgrade Utility or other 3-party TFTP client software.
3. Check that the firmware filename is correct.
4. Click "Upgrade" on the Firmware Upgrade Utility to start the upgrade.
5. After the upgrade is complete, the TFTP server will automatically stop running.

Do you want to upgrade firmware ?

3. Select a firmware file by clicking **Browse**.
4. Click **Upgrade** to perform the firmware upgrade.

## 4.7 Request a certificate from a CA server on Windows CA Server

1. Go to **Certificate Management** and choose **Local Certificate**.

[Certificate Management >> Local Certificate](#)

-----END CERTIFICATE REQUEST-----

```

- Connect to CA server via web browser. Follow the instruction to submit the request. Below we take a Windows 2000 CA server for example. Select **Request a Certificate**.

Microsoft Certificate Services -- vigor [Home](#)

**Welcome**

You use this web site to request a certificate for your web browser, e-mail client, or other secure program. Once you acquire a certificate, you will be able to securely identify yourself to other people over the web, sign your e-mail messages, encrypt your e-mail messages, and more depending upon the type of certificate you request.

**Select a task:**

- ☐ Retrieve the CA certificate or certificate revocation list
- ☒ Request a certificate
- ☐ Check on a pending certificate

[Next >](#)

## Select **Advanced request**.

The screenshot shows the 'Choose Request Type' page. At the top, there is a breadcrumb trail: 'Microsoft Certificate Services -- vigor'. A 'Home' link is in the top right corner. The main heading is 'Choose Request Type'. Below it, a message says: 'Please select the type of request you would like to make:'. There are two radio button options: 'User certificate request' and 'Advanced request'. The 'Advanced request' option is selected. Below the radio buttons, there is a button labeled 'User Certificate' and a text input field. At the bottom right, there is a 'Next >' button.

## Select **Submit a certificate request a base64 encoded PKCS #10 file or a renewal request using a base64 encoded PKCS #7 file**

The screenshot shows the 'Advanced Certificate Requests' page. At the top, there is a breadcrumb trail: 'Microsoft Certificate Services -- vigor'. A 'Home' link is in the top right corner. The main heading is 'Advanced Certificate Requests'. Below it, a message says: 'You can request a certificate for yourself, another user, or a computer using one of the following methods. Note that the policy of the certification authority (CA) will determine the certificates that you can obtain.' There are three radio button options: 'Submit a certificate request to this CA using a form.', 'Submit a certificate request using a base64 encoded PKCS #10 file or a renewal request using a base64 encoded PKCS #7 file.', and 'Request a certificate for a smart card on behalf of another user using the Smart Card Enrollment Station.' The second option is selected. Below the radio buttons, there is a 'Next >' button.

## Import the X509 Local Certificate Request text file. Select **Router (Offline request)** or **IPSec (Offline request)** below.

The screenshot shows the 'Submit A Saved Request' page. At the top, there is a breadcrumb trail: 'Microsoft Certificate Services -- vigor'. A 'Home' link is in the top right corner. The main heading is 'Submit A Saved Request'. Below it, a message says: 'Paste a base64 encoded PKCS #10 certificate request or PKCS #7 renewal request generated by an external application (such as a web server) into the request field to submit the request to the certification authority (CA)'. There is a text area labeled 'Saved Request:' containing a base64 encoded PKCS #10 certificate request. Below the text area, there is a 'Browse' button for a file to insert. There is a 'Certificate Template:' dropdown menu with 'Administrator' selected. Below it, there is an 'Additional Attributes' section with a list of attributes: 'Authenticated Session', 'Basic EFS', 'EFS Recovery Agent', 'User', 'IPSEC (Offline request)', 'Router (Offline request)', 'Subordinate Certification Authority', and 'Web Server'. The 'Router (Offline request)' attribute is selected. At the bottom right, there is a 'Submit >' button.

Then you have done the request and the server now issues you a certificate. Select **Base 64 encoded certificate** and **Download CA certificate**. Now you should get a certificate (.cer file) and save it.

- Back to Vigor router, go to **Local Certificate**. Click **IMPORT** button and browse the file to import the certificate (.cer file) into Vigor router. When finished, click refresh and you will find the below window showing “-----BEGIN CERTIFICATE-----.....”

**Certificate Management >> Local Certificate**

## 4.8 Request a CA Certificate and Set as Trusted on Windows CA Server

1. Use web browser connecting to the CA server that you would like to retrieve its CA certificate. Click **Retrieve the CA certificate or certificate revoking list**.

- In **Choose file to download**, click **CA Certificate Current** and **Base 64 encoded**, and **Download CA certificate** to save the .cer. file.

- Back to Vigor router, go to **Trusted CA Certificate**. Click **IMPORT** button and browse the file to import the certificate (.cer file) into Vigor router. When finished, click refresh and you will find the below illustration.

**Certificate Management >> Trusted CA Certificate**

#### X509 Trusted CA Certificate Configuration

**MyVigor for you**

MyVigor website replaces the VigorPro site as DrayTek's portal site for the latest products and services in network security, including Anti-Virus, Anti-Spam, Web Content Filter... etc. The products and functions that are supported in this site include:

VigorPro Unified Security Firewall series:

- Activation of Commtouch™ GlobalView Web Content Filter license key
- Activation of DT Anti-Virus license key
- Activation of Kaspersky Anti-Virus license key
- Activation of Commtouch™ Anti-Spam license key and membership

Vigor routers (for models that support Commtouch™)

- Activation of Commtouch™ GlobalView Web Content Filter license key

The MyVigor website contains a trail version of Commtouch™ GlobalView Web Content Filter, which allows the users to set filters to block out undesirable web pages in the Internet jungle.

More customer-oriented services are planned for MyVigor site for the near future.

## 4.10 Web Portal Log-In Application for Wireless Client

With the increase of hotspot deployed via Wi-Fi technology in the world, we may easily get Internet connection with the served wireless connection facility provided by the campus, chain store, the coffee shop, the airport, department store, municipal...etc.. Such hotspot deployment contributes to seamless Internet connection which enables the remote workers or wireless users to get onto the cyber space anywhere at anytime.

In contrast to the real wireless user's advantage earn from hotspot, the Wi-Fi connection providers may also earn placement marketing advantage via Vigor2850n as offering wireless connection service at its hotspot. With the smart, easy configuration of WLAN on Vigor2850n, the free riders of Wi-Fi connection at hotspot would be automatically directed to dedicated web site. In a department store with Vigor2850n deployed, the mobile users will be directed to its own company web site or dedicated special promotion program web page as firstly get wireless connection to the Internet. The Internet surfers would have a glance at least on the dedicated web site and related contents.

## Direct Marketing via Web Portal Log-in

## Wireless General Setup

1. From Vigor router web configuration page, select **Wireless LAN>>General Setup**.
2. Check **Enable Wireless LAN** and set the SSID. Then click **OK** to save the settings.

General Setting (IEEE 802.11)

☒ Enable Wireless LAN

Mode : Mixed(11b+11g+11n)

Channel: Channel 6, 2437MHz

	Enable	Hide SSID	SSID	Isolate Member	Isolate VPN
1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	DrayTek web portal login	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>

**Note:**  
Enabling the Isolate Member configuration will forbid the wireless clients associated to the same SSID from connecting to each other.

The isolate VPN configuration will isolate the wireless traffic from VPN connections and thus, wireless clients will not be able to access the VPN network under this setting.

Associated Schedule Profiles: , , ,

**Note:**  
Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored. Valid settings are profile indexes 1 to 15.

## Wireless Portal Log-in Setting

1. Open **LAN>>Web Portal Setup** and click **Index #1**.
2. Click **Redirect to URL** and type the URL in the field below. User's first HTTP request will be redirected to the URL defined here. (Here we take www.draytek.com for an example.)

### LAN >> Web Portal Setup

#### Profile Index: 1

☐ Disable

☒ URL Redirect

☐ Message

Applied Interfaces

☐ LAN1 ☐ LAN2 ☐ LAN3 ☐ LAN4  
☐ SSID1 ☐ SSID2 ☐ SSID3 ☐ SSID4

www.draytek.com

e.g. http://www.draytek.com

Note : If the User Management application is enabled, it will override the Web Portal settings seen here.

<h1><font color="red">Vigor</font></h1><h2> - Reliable connectivity</h2><h2> - Robust firewall protection</h2><h2> - Multi-site secure communication</h2>

(Max 255 characters)

OK Cancel

- Click **OK** to save the settings. Note that do not choose **URL Redirect** for this page if you have already enabled the user-based mode under **User Management**. For such case, choosing **Message** will be accepted.

**Note:** This feature is useful for restaurant, hotel, shopping store and so on. Wireless clients will be redirected to the specified web sites when they open the browser through the wireless environment set by the restaurant, hotel, shopping store, and so on. It can gain the result of advertisement effectively.

- Use a Notebook or mobile device supporting Wireless function to connect Vigor2850 via Wireless LAN.

- Try to open a new tab in the same browser (for IE 7.0/FireFox and above) or open a new web browser.
- The first connection session will be redirected to DrayTek Website (specified in step 2) automatically.

## 4.11 How to Customize Your Login Page

Login page can be customized to fit the request of the administrator.

1. Open **User Management>>General Setup**. Set **User-Based** as the Mode and click **OK** to save the settings.

### User Management >> General Setup

#### General Setup

Mode:

User-Based

Web Authentication:

HTTPS

Notice :

1. User Management will refer to active rules in Data Filter as whitelists and blacklists in user-based firewall mode.

2. Users match the above lists will not be required for authentication. The firewall rules policy will still valid.

3. Otherwise, authentication required for users not matched the above lists. The firewall rules designated in the user profile's policy will still valid.

Welcome Message and Bulletin (Max 511 characters) <a href="#">Preview</a>   <a href="#">Set to Factory Default</a>
<div style="border: 1px solid #ccc; padding: 5px; min-height: 100px;"> <p>&lt;h1&gt;&lt;b&gt;&lt;font color=red&gt;Welcome Message&lt;/font&gt;&lt;/b&gt;&lt;/h1&gt;&lt;p&gt;This welcome message is displayed in the Login page of the router. Replace this text with your own message. &lt;/p&gt;&lt;ol&gt;&lt;li&gt;The welcome message can be written in HTML so lists such as this one can be created &lt;/li&gt;&lt;li&gt;Other markup tags such as p, font or img can be used&lt;/li&gt;&lt;/ol&gt;</p> </div>
Examples of Welcome Message and Bulletin: <h1><b><font color=red>Welcome Message</font></b></h1><p>Message</p>

- Open a new tab in the same browser (for IE 7.0/FireFox and above) or open a new web browser.
- Try to access into the web configurator (e.g., 192.168.1.1) of Vigor router. Please note “*Just for Carrie*” is displayed as a heading on the login dialog box.

7. After typing the username and password (defined in **User Management>>User Profile**), click **Login**. You can access into Internet or access into the **Landing Page** if configured in **User Management>>General Setup**.

## 4.12 How to Implement the LDAP/AD Authentication for User Management?

For simplifying the configuration of LDAP authentication for User Access Management, we implement “Group” feature.

There is no need to pre-configure user profile for each user on Vigor router anymore. We only need to configure the Groups DN, then the Vigor router (e.g., Vigor 3200 series) can pass the authentication to LDAP server with the pre-defined Group path.

Below shows the configuration steps:

1. Access into the web user interface of the Vigor router.
2. Open **Applications>>Active Directory /LDAP** to get the following page for configuring LDAP related settings.

**Applications >> Active Directory /LDAP**

Active Directory /LDAP

[Set to Factory Default](#)

General Setup

Active Directory / LDAP Profiles

☒ Enable

Bind Type

Regular Mode

Server Address

172.16.2.8

Destination Port

389

☐ Use SSL

Regular DN

uid=vpntest,ou=vpnuser,dc=ms,dc=dr

Regular Password

\*\*\*\*

OK

Cancel

**Note:** After finishing the configuration of the LDAP profiles, they will be listed in the page of **VPN and Remote Access >> PPP General Setup**. If you want to use the profiles for VPN authentication, check the boxes under PPTP LDAP Profiles in **VPN and Remote Access >> PPP General Setup** first.

There are three types of bind type supported:

- **Simple Mode** – Just simply do the bind authentication without any search action.
- **Anonymous** – Perform a search action first with Anonymous account then do the bind authentication.
- **Regular Mode**– Mostly it is the same with anonymous mode. The different is that, the server will firstly check if you have the search authority.  
For the regular mode, you’ll need to type in the **Regular DN** and **Regular Password**.

3. Create LDAP server profiles. Click the **Active Directory /LDAP** tab to open the profile web page and click any one of the index number link.

If we have two groups “**RD1**” and “**SHRD**” on LDAP server, we can configure two LDAP server profiles with different Group Distinguished Name.

Applications >> Active Directory /LDAP>>Server Profiles

Index No. 1

Name	<input type="text" value="rd1"/>

Mutual Authentication (PAP)	<div><input type="radio"/> Yes <input checked="" type="radio"/> No</div>
Username <div></div>	
Password <div></div>	
<b>IP Address Assignment for Dial-In Users</b> (When DHCP Disable set)	
Assigned IP start	LAN 1 <div>192.168.1.200</div>
	LAN 2 <div>192.168.2.200</div>
	LAN 3 <div>192.168.3.200</div>
	LAN 4 <div>192.168.4.200</div>

OK

**LDAP Server Profiles for PPP Authentication**

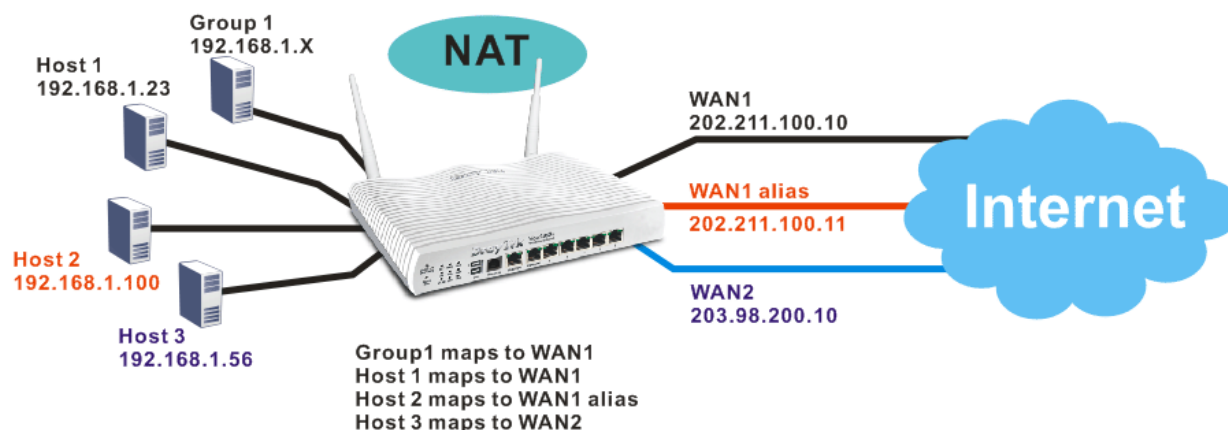

<input checked="" type="checkbox"/>	rd1
<input checked="" type="checkbox"/>	shrd

Note: Please select 'PAP Only' in 'Dial-In PPP Authentication', if you want to use AD/LDAP for PPP Authentication!!

- After finished above configurations, click OK to save the settings. Now, users belong to either “rd1” or “shrd” group can access Internet after inputting their credentials on LDAP server.

## 4.14 How to Setup Address Mapping

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

Suppose the WAN settings for a router are configured as follows:

WAN1: 202.211.100.10, WAN1 alias: 202.211.100.11

WAN2: 203.98.200.10

Without address mapping feature, when a NAT host with an IP say "192.168.1.10" sends a packet to the WAN side (or the Internet), the source address of the NAT host will be mapped into either 202.211.100.10 or 203.98.200.10 (which IP or mapping is decided by the internal load balancing algorithm).

With address mapping feature, you can manually configure any host mapping to any WAN interface to fit the request. In the above example, you can configure NAT Host 1 to always map to 202.211.100.10 (WAN1); Host 2 to always map to 202.211.100.11 (WAN1 alias); Host 3 always map to 203.98.200.10 (WAN2) and Group 1 to always map to 202.211.100.10 (WAN1).

NAT Address Mapping function lets you specify the outgoing IP address(es) for one internal IP address or a block of internal IP addresses.

We will take an example to introduce how to make use of this feature.

1. Log into the web user interface of Vigor2850.
2. Open **WAN>>Internet Access**. For WAN1, choose **MPoA/Static or Dynamic IP** as the **Access Mode**.

### WAN >> Internet Access

#### Internet Access

Index	Display Name	Physical Mode	Access Mode		
WAN1		ADSL / VDSL	MPoA / Static or Dynamic IP	<a href="#">Details Page</a>	<a href="#">IPv6</a>
WAN2		Ethernet	None	<a href="#">Details Page</a>	<a href="#">IPv6</a>
WAN3		USB	None	<a href="#">Details Page</a>	<a href="#">IPv6</a>

**Note:** Only one WAN can support IPv6.

[Advanced](#) You can configure DHCP client options here.

- Click the **Details Page** of WAN 1 to open the following page. From the above figure, set main WAN IP address as 202.211.100.10.

- ☐ Wizard Mode: most frequently used settings in three pages
- ☒ Advance Mode: all settings in one page

OK

Now, the packets sent to the remote PC (IP address: 203.65.1.35) will be forcefully to pass through WAN1.

# 5

## Trouble Shooting

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

### 5.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections.  
Refer to “**1.3 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**1.3 Hardware Installation**” to execute the hardware installation again. And then, try again.

## 5.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

### For Windows

The example is based on Windows XP. As to the examples for other operation systems, please refer to the similar steps or find support notes in [www.DrayTek.com](http://www.DrayTek.com).

1. Go to **Control Panel** and then double-click on **Network Connections**.

2. Right-click on **Local Area Connection** and click on **Properties**.

3. Select **Internet Protocol (TCP/IP)** and then click **Properties**.

4. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.

### For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

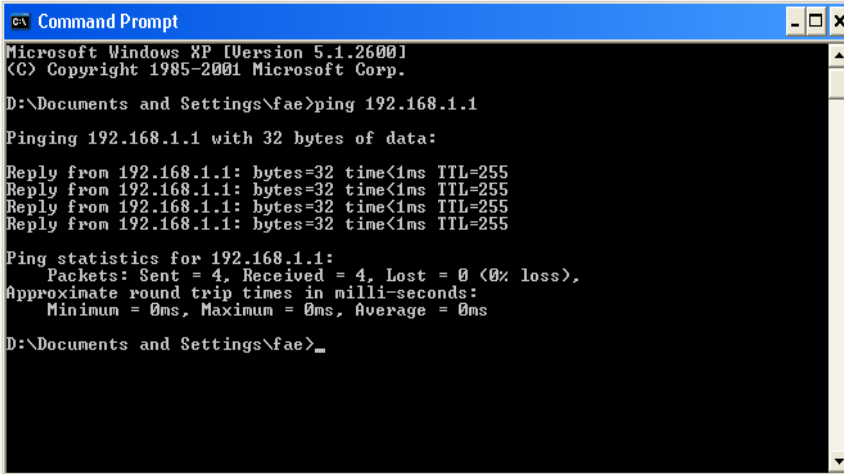

## 5.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 6.2)

Please follow the steps below to ping the router correctly.

### For Windows

1. Open the **Command Prompt** window (from **Start menu> Run**).
2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/ 2000/XP/Vista). The DOS command dialog will appear.

```

C:\ Command Prompt
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_

```

3. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“Reply from 192.168.1.1:bytes=32 time<1ms TTL=255”** will appear.
4. If the line does not appear, please check the IP address setting of your computer.

### For MacOs (Terminal)

1. Double click on the current used MacOs on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“64 bytes from 192.168.1.1: icmp\_seq=0 ttl=255 time=xxxx ms”** will appear.

```

Terminal - bash - 80x24
Last login: Sat Jan  3 02:24:18 on ttys1
Welcome to Darwin!
Vigor10:~ draytek$ ping 192.168.1.1

## 5.4 Checking If the ISP Settings are OK or Not

Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1/WAN2 to review the settings that you configured previously.

### WAN >> Internet Access

#### Internet Access

Index	Display Name	Physical Mode	Access Mode	Details Page	IPv6
WAN1		ADSL / VDSL	MPoA / Static or Dynamic IP	Details Page	IPv6
WAN2		Ethernet	None	Details Page	IPv6
WAN3		USB	None	Details Page	IPv6

**Note :** Only one WAN can support IPv6.

[Advanced](#) You can configure DHCP client options here.

## 5.5 Problems for 3G Network Connection

When you have trouble in using 3G network transmission, please check the following:

### Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G USB Modem into your Vigor2850. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2850.

### USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

## Transmission Rate is not fast enough

Please connect your Notebook with 3G USB Modem to test the connection speed to verify if the problem is caused by Vigor2850. In addition, please refer to the manual of 3G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

## 5.6 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

**Warning:** After pressing **factory default setting**, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

### Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

## Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration  
☐ Using factory default configuration

Reboot Now

## Auto Reboot Time Schedule

Index(1-15) in **Schedule** Setup: , , , **Note:** Action and Idle Timeout settings will be ignored.

OK

Cancel

## Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

## 5.7 Contacting Your Dealer

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.
